Introduction

Nexus Learn takes a QCTO-registered skills development provider from enrolment to certification in one system: learner records, assessment and moderation, lessons, reports and certificates of completion.

> **About this version.** This manual describes the corrected build delivered with it (nexus-learn-fixed-v5.zip). Compared with the build first supplied: learners no longer see the enrolment **Edit** button or the module forms; the Help window's *Where your data lives* paragraph is up to date; on-screen messages point to the Users screen instead of "Settings, Users"; the README and DEPLOYMENT.md now say that Firebase Storage (logo and automatic backups) needs the Blaze plan; and assessor notes are now staff-only: they are kept in a separate record that no learner can read, and an Administrator moves any notes written earlier across once, from Settings → Data (section 11).

How the system fits together

Five kinds of record explain every screen.

Record	What it is	Who captures it
Qualification	What is taught. Holds modules, each typed Knowledge (K), Practical Skill (P) or Work-Based Experience (W)	Admin
Learner	A person: ID number, demographics, contact details, POPIA consent	Admin, Facilitator/Assessor
Enrolment	One learner on one qualification: programme type, cohort, site, agreement number, status, EISA and certificate details	Admin, Facilitator/Assessor
Progress	One row per learner per module: the assessment result first, then the moderation result	Assessor (assessment), Moderator (moderation)
Lesson	Teaching material for a module: text, a YouTube video, a Google Drive file, or optionally Bunny Stream	Admin, Facilitator/Assessor

An enrolment is always in one of six statuses: Active, On Hold, Withdrawn, Internally Complete, EISA Registered or Certified.

Ready for EISA is calculated, never typed. A module is complete when its assessment status is *Assessed - Competent* and, because Settings → Rules requires it by default, its moderation status is *Confirmed*. An optional minimum of logged hours can also apply to Work-Based Experience modules. An enrolment is ready when every module is complete.

Lessons are study material, not assessment. A learner ticking a lesson complete records their own study progress. It never marks a module competent; only an assessor can do that.

Who can do what

The permissions below are the ones the screens offer. The database enforces the same limits on the server, so a hidden button is never the only protection.

Task	Admin	Facilitator/Assessor	Moderator	Learner
Capture and edit learners and enrolments	Yes	Yes	No	No
Delete a learner	Yes	No	No	No
Record assessment results	Yes	Yes	No	No
Record moderation results	Yes	No	Yes	No
Record EISA registration, EISA results and certificate numbers	Yes	No	No	No
Create and edit qualifications	Yes	No	No	No

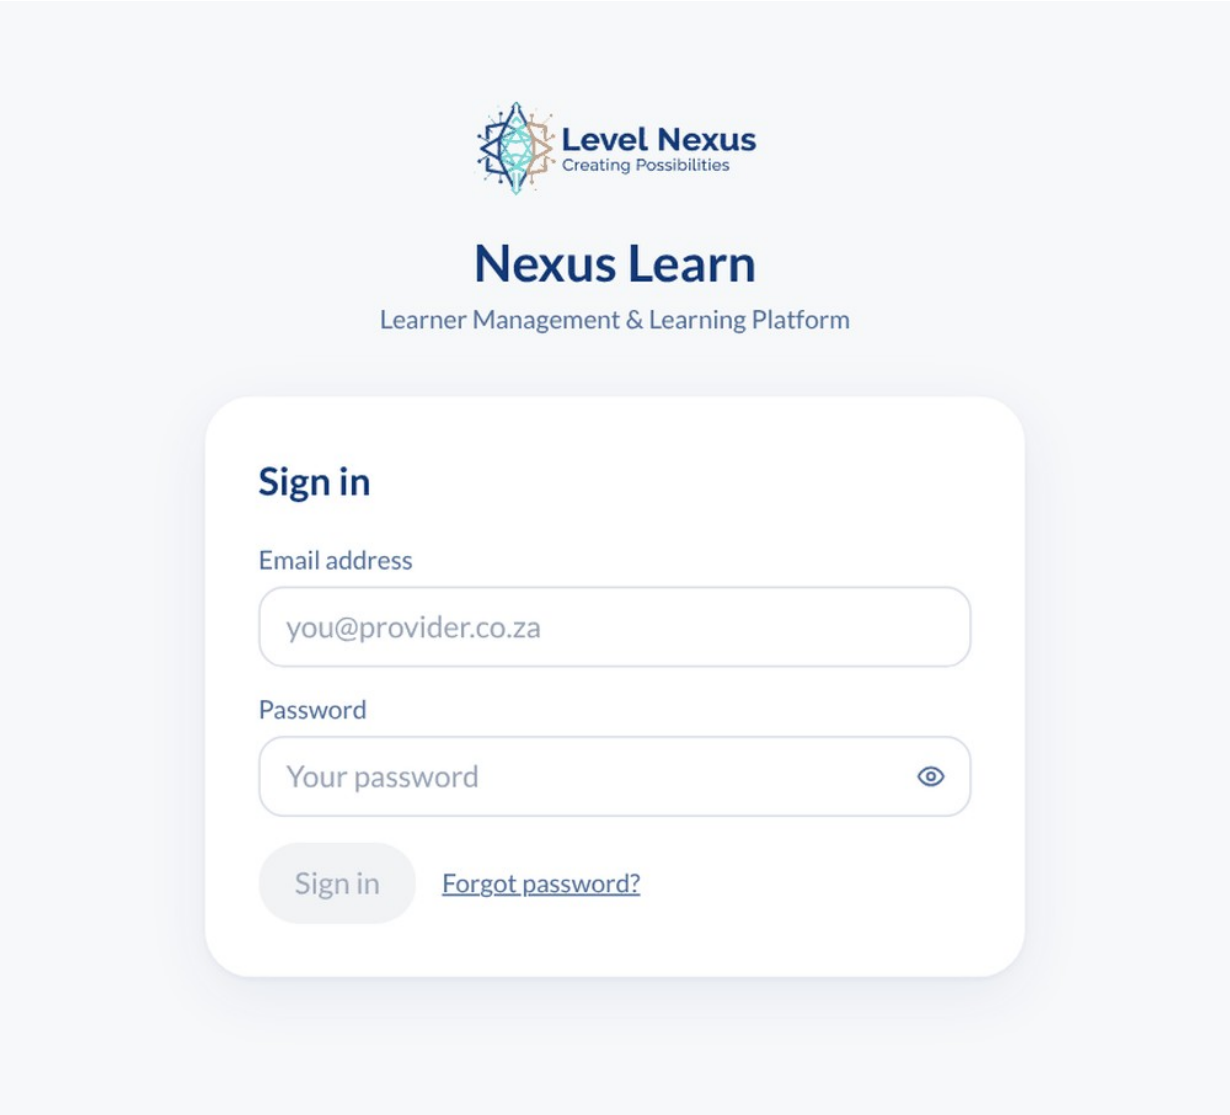

Task	Admin	Facilitator/Assessor	Moderator	Learner
Write, publish and delete lessons	Yes	Yes	Read only	Published lessons only
Issue certificates of completion	Yes	Yes	No	Print their own
My work queues	Yes	Yes	Yes	No
Cohort marking grid	Yes	Yes	No	No
Reports and exports	Yes	Yes	Yes	No
Create and manage logins (Users)	Yes	No	No	No
Change installation settings	Yes	No	No	No
Change own password (Settings → Account)	Yes	Yes	Yes	Yes
See own record, enrolments, results and lessons	Yes	Yes	Yes	Own only

1. Signing in and finding your way around

Everyone uses the same web address and the same sign-in screen; what you see afterwards depends on your role.

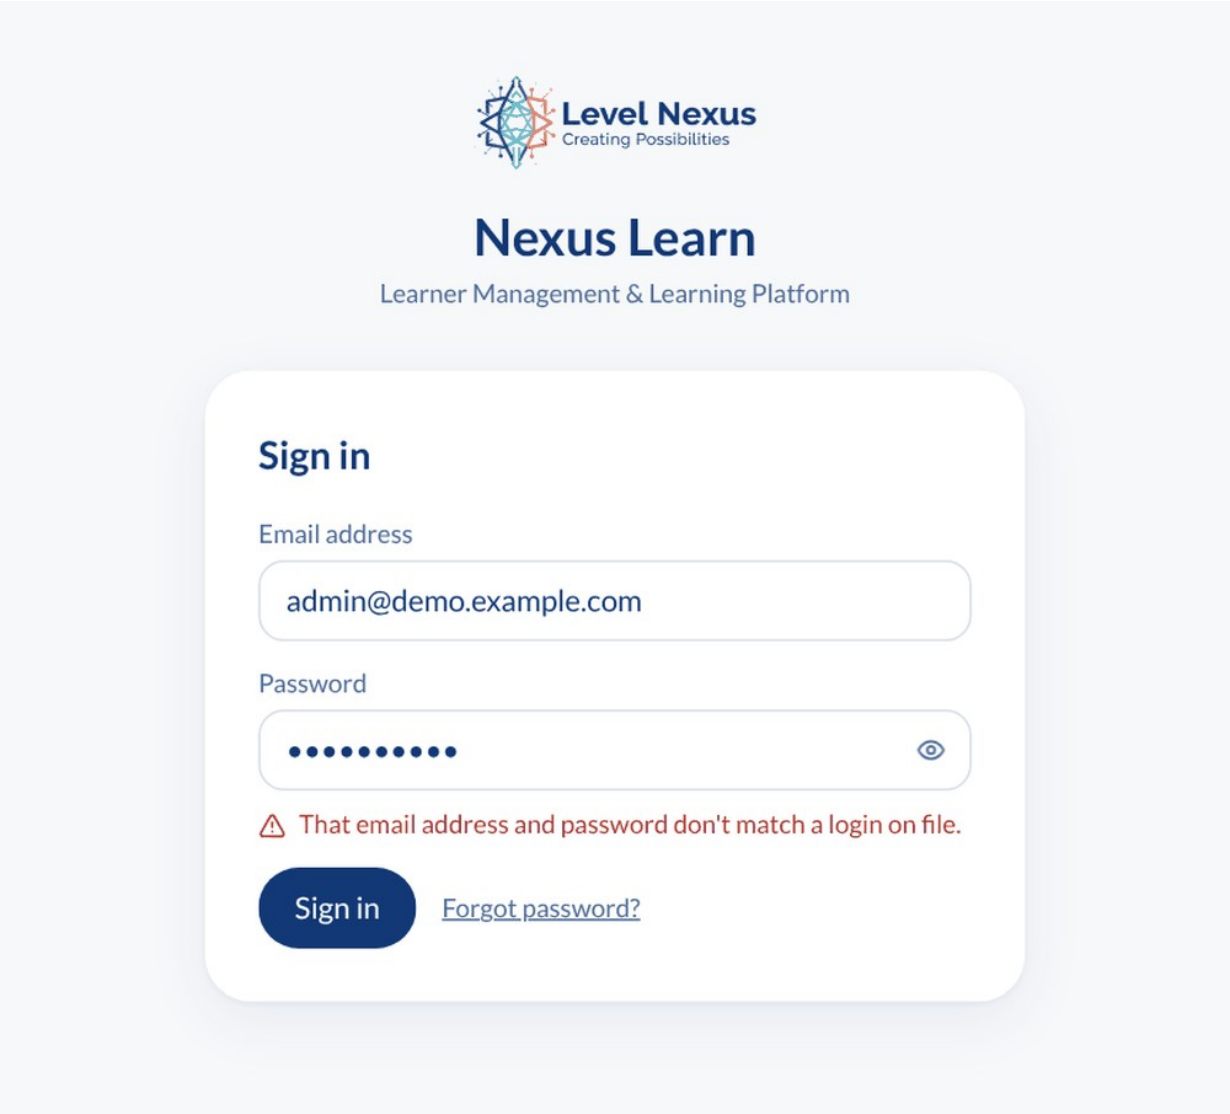

Signing in

1. Open the system's web address.
2. Type your email address and password. The eye icon at the right of the password box shows what you typed. **Sign in** stays greyed out until both boxes are filled.
3. Press **Sign in**. Your Dashboard opens.

The sign-in screen, showing your provider's logo and name

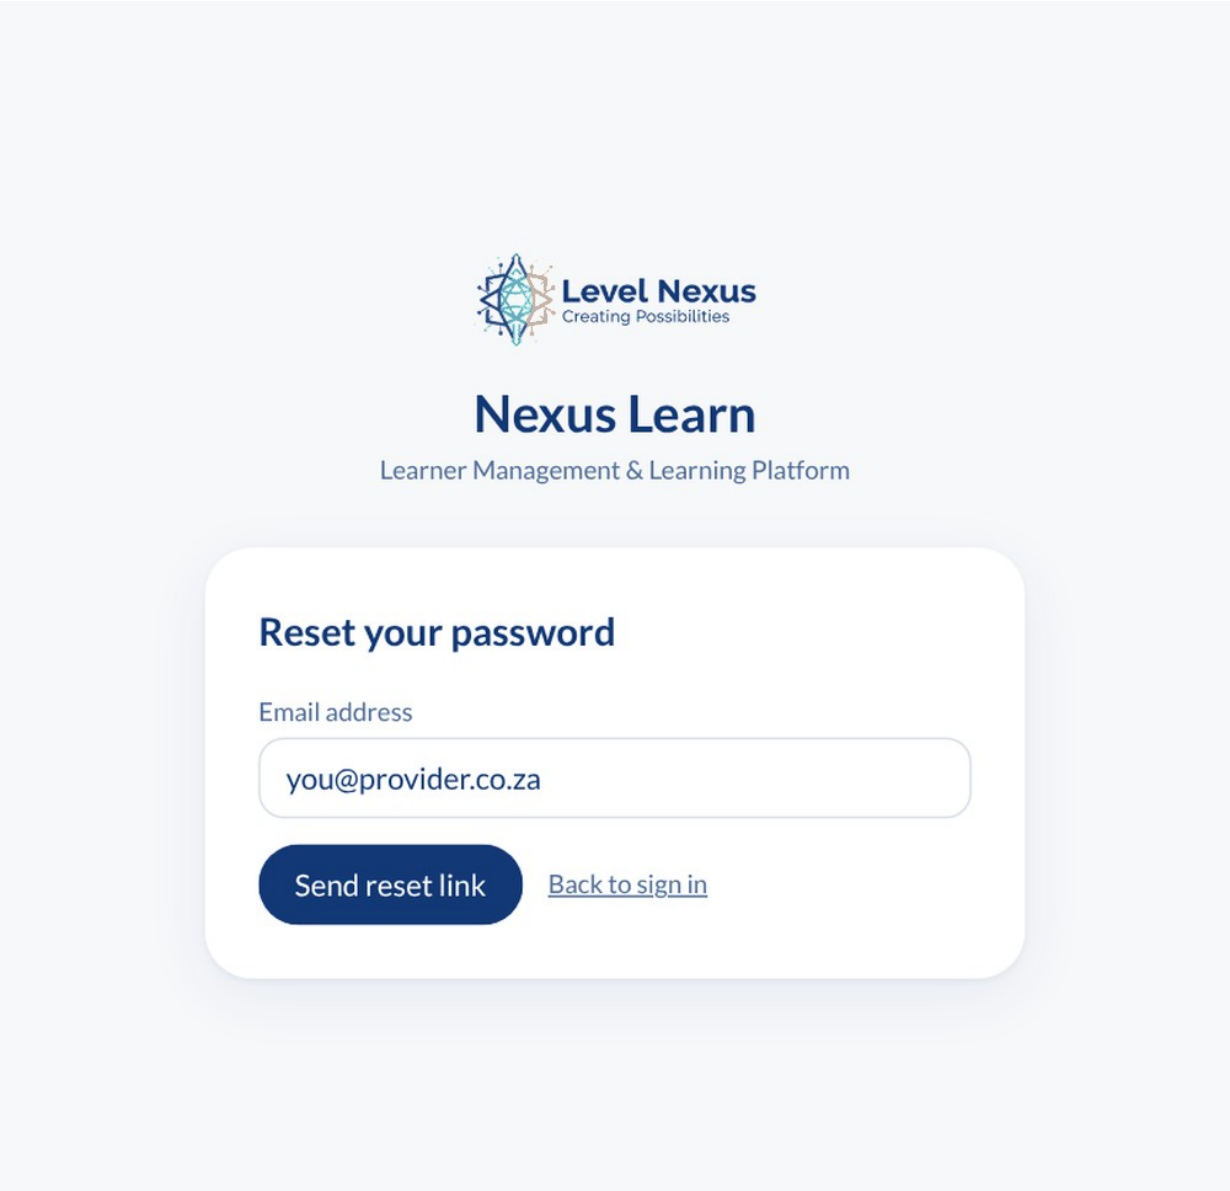

If either detail is wrong the screen says *That email address and password don't match a login on file.* It does not say which of the two was wrong, on purpose.

Sign-in screen after a wrong password

Forgotten password

1. Under the sign-in box press **Forgot password?**
2. Type your email address and press **Send reset link**.
3. Open the email (check the spam folder), choose a new password, then come back and sign in.

Reset your password screen

The screen gives the same reply whether or not the address has a login (*If there's a login for … a reset link is on its way*), so nobody can use it to find out who has an account. The link expires after about an hour. If it never arrives, ask an Admin to send you one from the Users screen.

To change your password while signed in, use **Settings → Account**: type your current password, then the new one twice. The new password must be at least the length set under Settings → Security (12 characters unless the Admin changed it; the sign-in service never accepts fewer than 6). Whatever the length, a password is refused if it is a common one, a keyboard or number sequence, mostly repeated characters, or built from your name or email address, and the message says which. A passphrase of several unrelated words, or one made by a password manager, always passes.

Automatic sign-out. If you do nothing (no key press, click, touch or scroll) for 20 minutes as staff, or 60 minutes as a learner, a box says *Still there?* and counts down for one minute. Press **Stay signed in** to carry on; otherwise you are signed out and the sign-in screen says why. Moving the mouse while the box is showing does not dismiss it. Your Admin can change the times under Settings → Security.

Two screens you may see instead of the Dashboard

You see	What it means	What to do
This sign-in has no access record	Your email and password are correct, but nobody has given the login a role yet.	Ask an Admin to add you on the Users screen.
This login has been switched off	An Admin marked your login inactive, so nothing can be read or changed.	Speak to your Admin. Press **Sign out** to leave.

First-time setup of a brand-new installation

On an installation that has never been set up, a link under the sign-in box says **Setting this system up for the first time?** It opens **Create the first administrator**: your full name, email address, a password (at least 12 characters, with the same quality checks as every other password), and the password again, then **Create administrator**. This works once only; the database rules refuse a second attempt. That account then creates everyone else from the Users screen. The deployment steps that come before this are outside the user manual and the SOPs: they are in DEPLOYMENT.md.

The menu

The menu runs down the left of the screen. You only see the items your role may use.

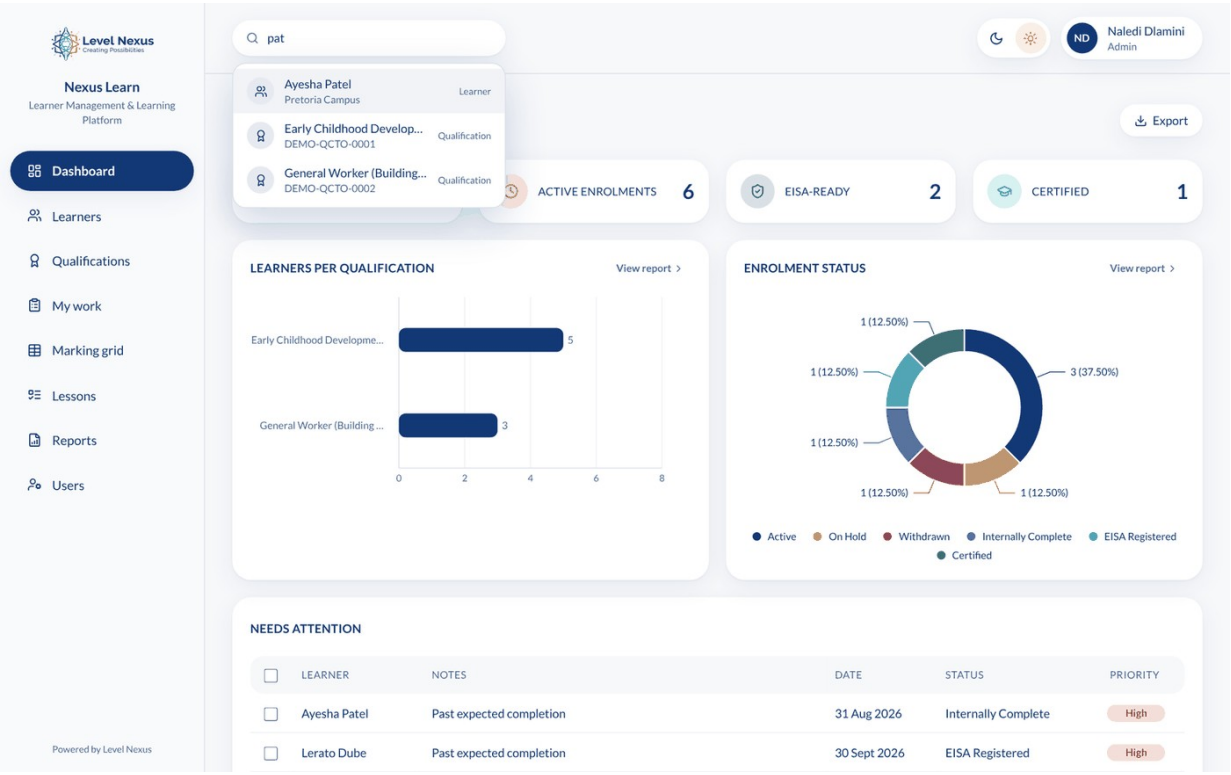

Menu item	Admin	Facilitator/Assessor	Moderator	Learner
Dashboard	Yes	Yes	Yes	Yes
Learners (a learner sees **My progress**)	Yes	Yes	Yes	Own record only
My learning	No	No	No	Yes
Qualifications	Yes	Yes	Yes	No
My work	Yes	Yes	Yes	No
Marking grid	Yes	Yes	No	No
Lessons	Yes	Yes	Yes (read-only)	No
Reports	Yes	Yes	Yes	No
Users	Yes	No	No	No

On a phone the left menu becomes a bar along the bottom of the screen with shorter names (Progress, Learn, Quals, Marking).

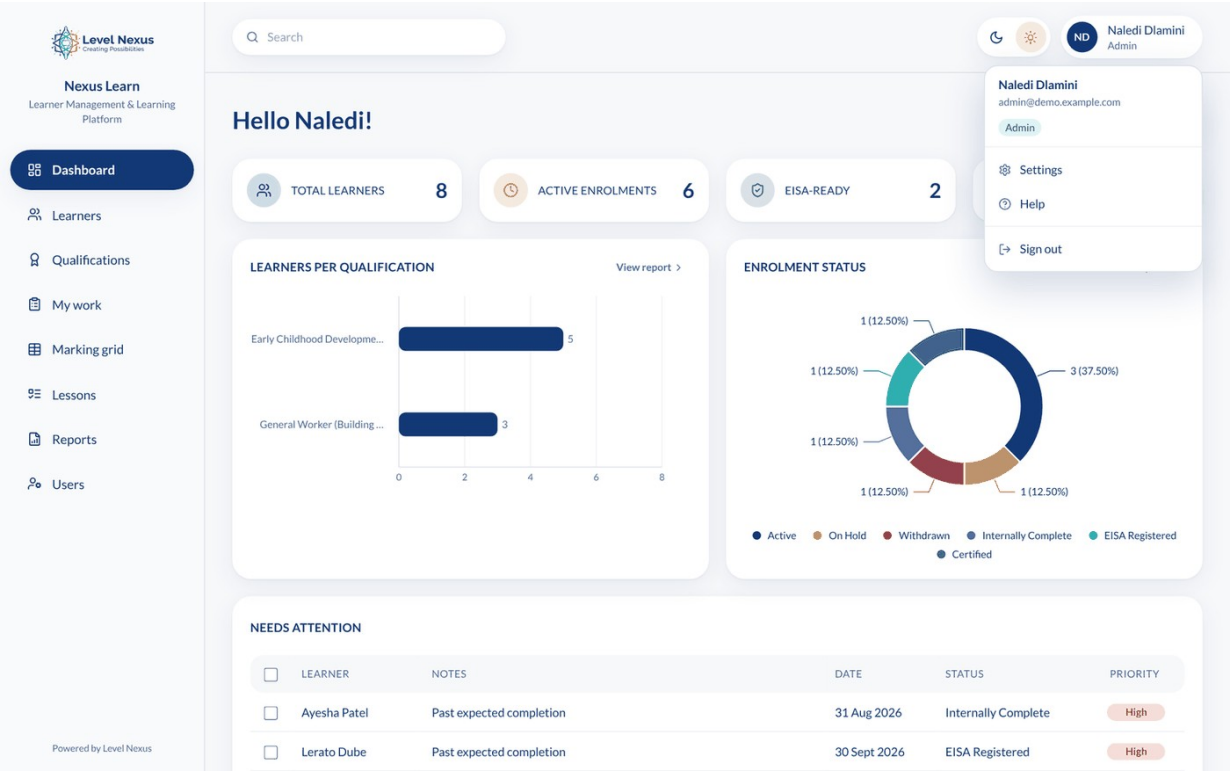

The top bar

Across the top, from left to right:

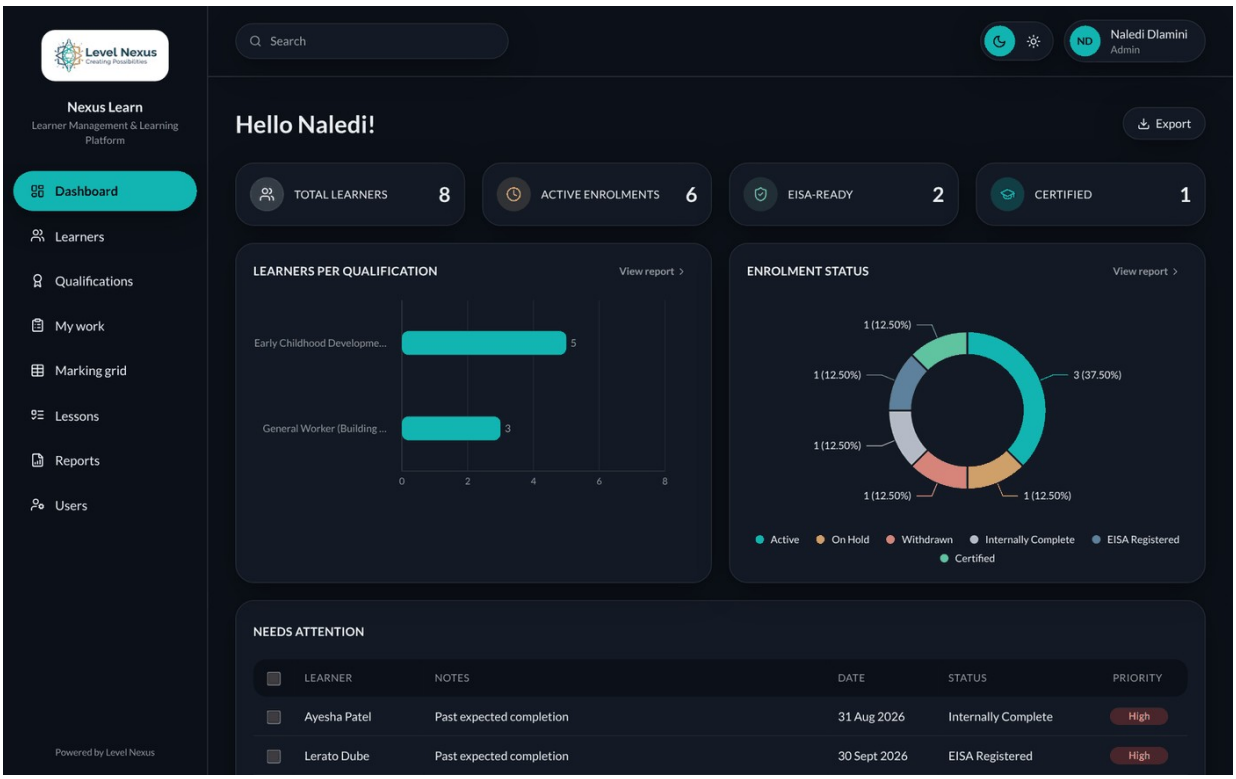

- **Search** (staff only). Type part of a learner's name, ID number or employer, a qualification's title, ID or module, or a lesson title. Up to five learners, four qualifications and four lessons are listed. Use the arrow keys and Enter, or click a result: a learner opens their profile, a qualification opens the Qualifications screen filtered to it. Esc closes the list. Learners do not get search, because they can only see their own record.
- **Light and dark buttons.** The moon and sun switch the whole system between a light and a dark appearance on this device.
- **Your name.** Opens a small menu with your name, email address and role, then **Settings**, **Help** and **Sign out**. Everyone can open Settings to change their own password; the other Settings tabs are for Admins.

Global search listing a learner and two qualifications

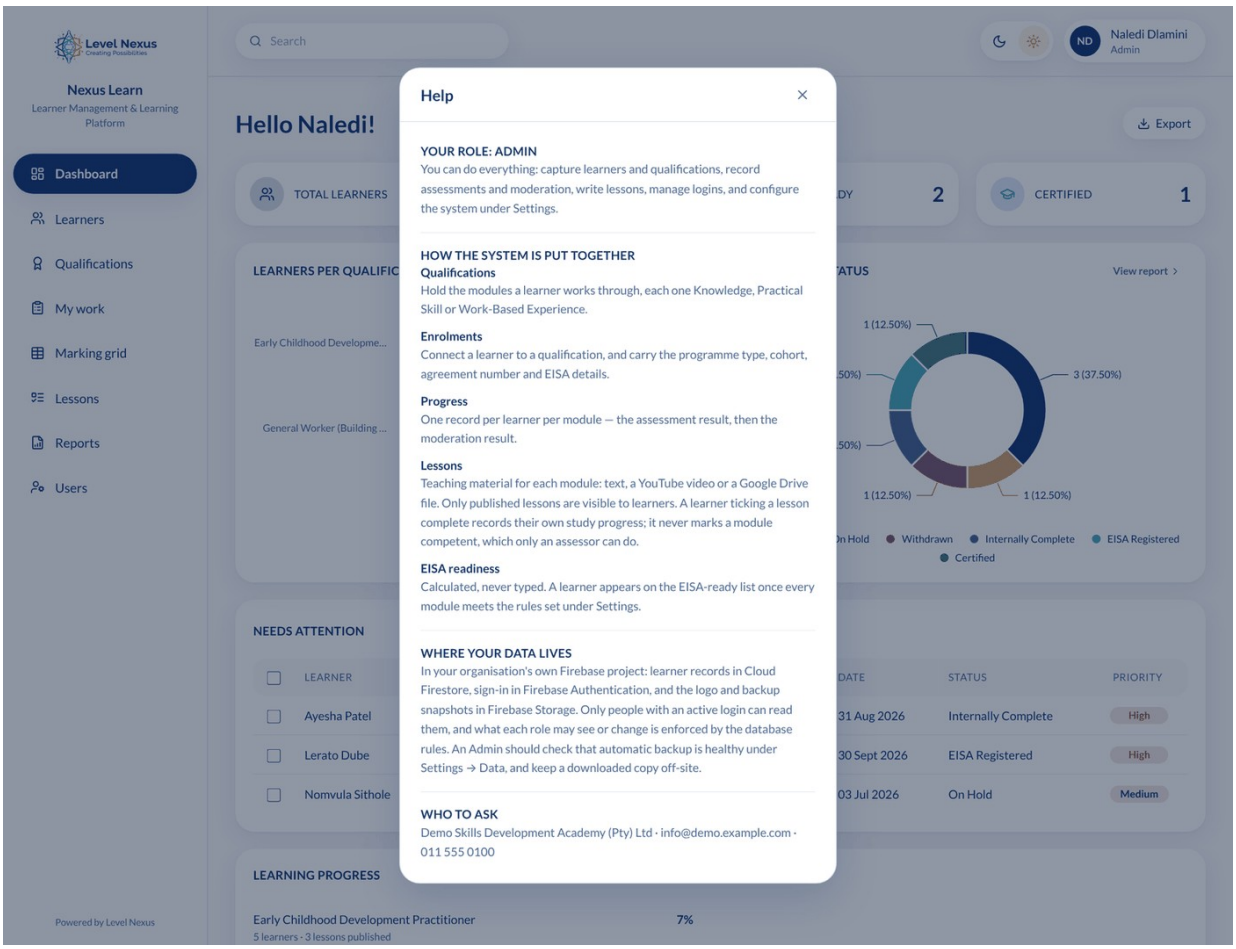

The profile menu with Settings, Help and Sign out

The same Dashboard in dark mode

Help

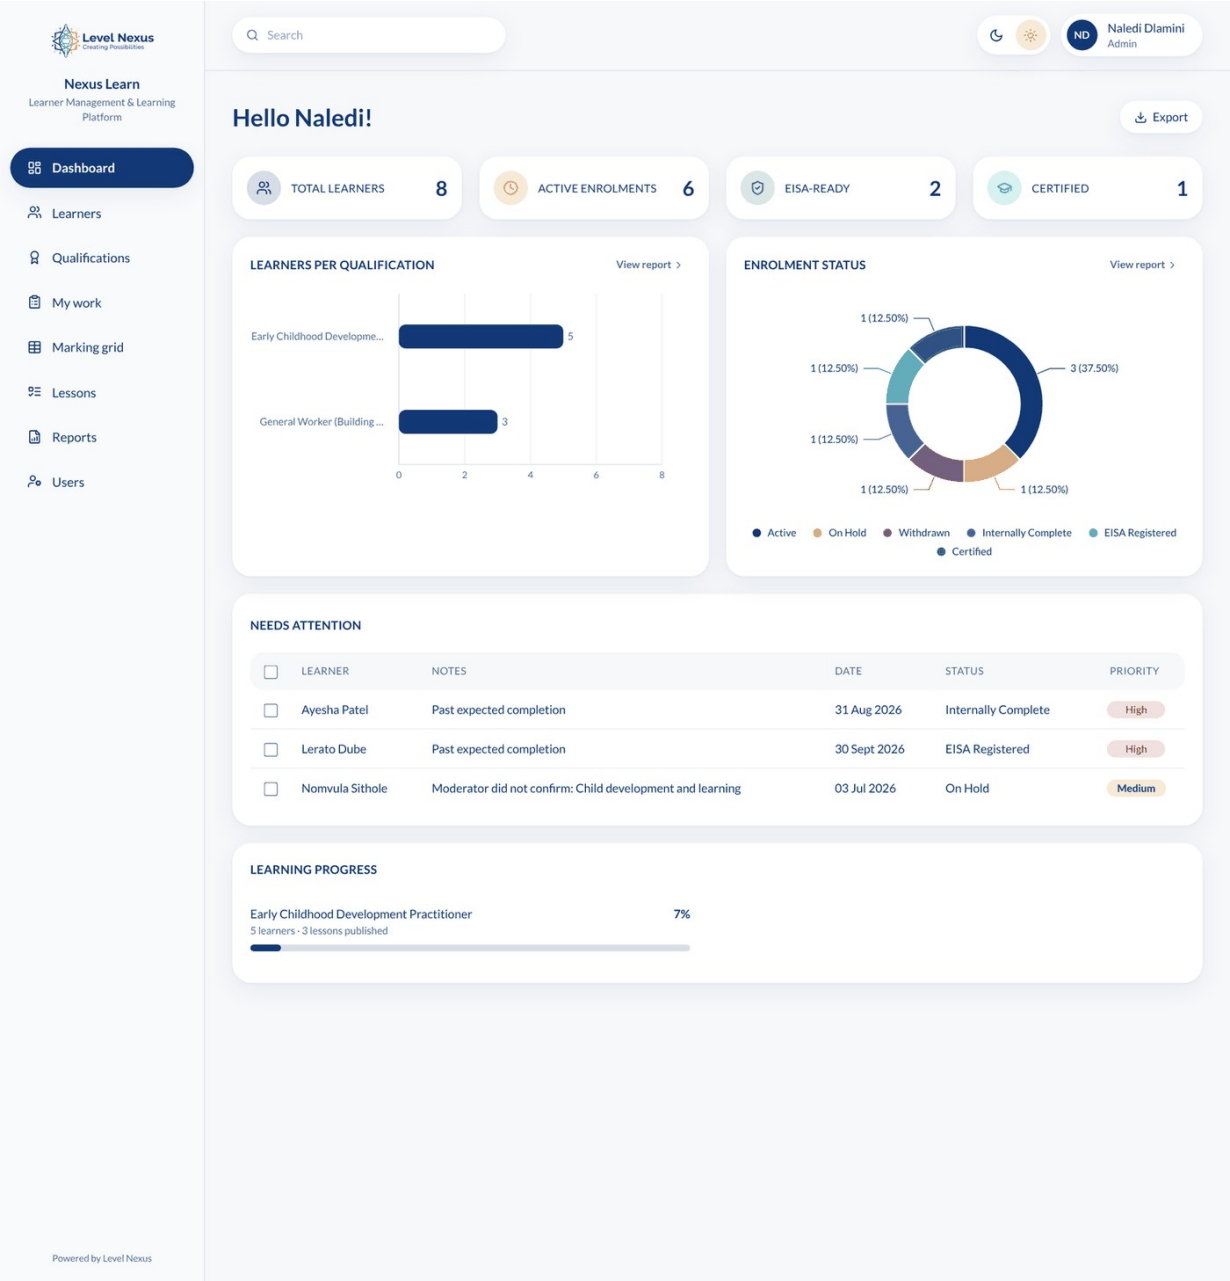

Help opens a short guide written for your role, with the name and contact details of your provider under *Who to ask* (an Admin sets those in Settings → Organisation).

The Help window for an Admin

2. The Dashboard

Staff land on the Dashboard after signing in. It answers three questions: how big is the programme, who needs attention, and how far through the lessons are people. Admins, Facilitator/Assessors and Moderators all see the same Dashboard, built from the same live records. Learners get their own, described in section 11.

The Admin Dashboard: four counts, two charts, Needs attention and Learning progress

The four counts

Card	What it counts
Total Learners	Every learner record in the system.
Active Enrolments	Enrolments that are not Withdrawn and not Certified. On Hold still counts as active.
EISA-Ready	Enrolments where every module is complete under your readiness rules and the enrolment is not yet Certified. Calculated each time you open the screen, never typed in.

Card	What it counts
Certified	Enrolments whose status is Certified.

The two charts

Learners per qualification is a bar for each qualification, counting its enrolments. **Enrolment status** is a ring showing how many enrolments sit in each of the six statuses (Active, On Hold, Withdrawn, Internally Complete, EISA Registered, Certified). **View report** on either card opens Reports. On a phone the two charts share one card with a **By qualification / By status** switch.

Needs attention

One list of records a person should look at, in two kinds:

- **Past expected completion** (priority **High**): the enrolment's expected completion date has passed and it is not Certified or Withdrawn.
- **Moderator did not confirm: *module title*** (priority **Medium**): a moderator recorded *Not Confirmed - Review Required* on a module.

High items come first, then the oldest date. Click a row or a name to open that learner. Tick rows and press **Export selected** to download them as a CSV, for example to hand a facilitator their list. Ticking changes nothing in the records. When nothing is flagged the card says *Nothing flagged right now*.

Learning progress

For each qualification that has published lessons, a bar shows the average share of lessons completed across its current (not Withdrawn) enrolments. Click a row to open that qualification's lessons. This is study progress only; it never means a learner is competent.

The Export button

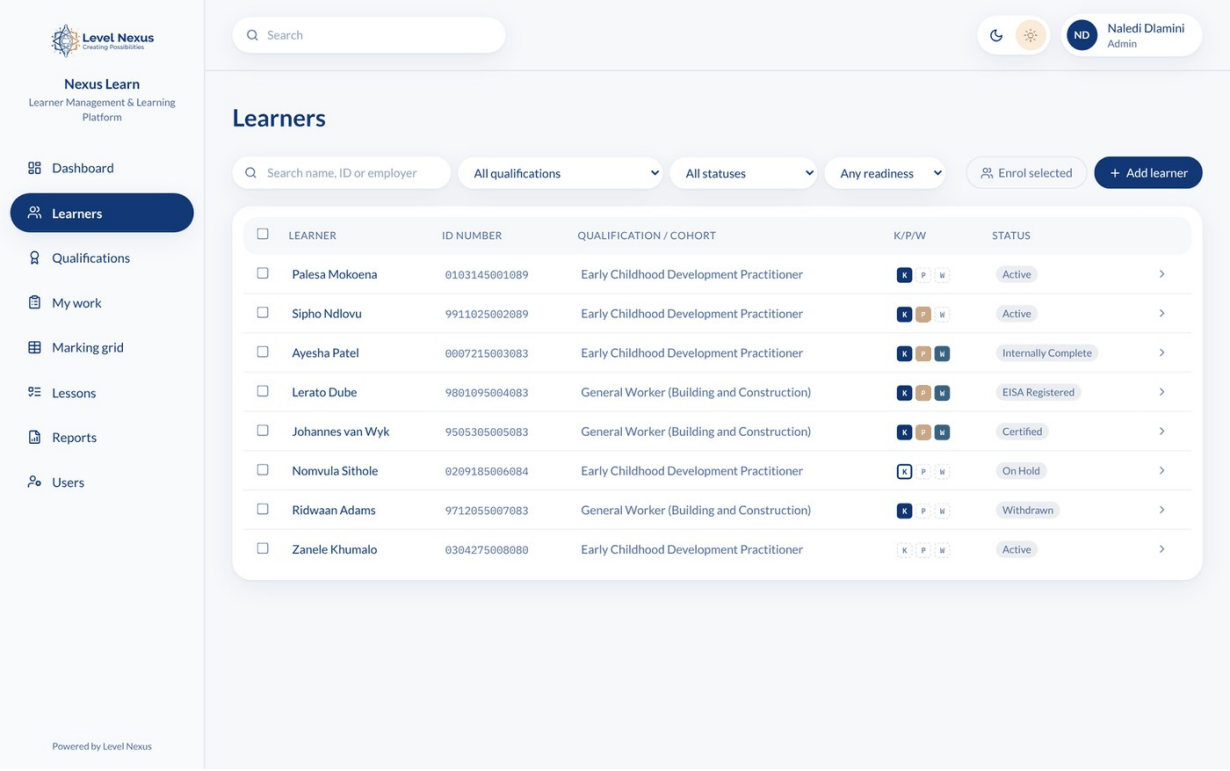

Export at the top right downloads the master workbook: one Excel file with a Summary tab and a tab for each report. It is the same file as **Reports → Master record** (section 8).

Banners you may see above the counts

Banner	Meaning	What to do
Getting started (four steps: Add a qualification, Add lessons, Import or add learners, Create learner logins)	A new installation. Each step ticks itself when the data exists and **Go** jumps to the right screen. The card disappears once all four are done. **Hide for now** hides it until the next visit.	Work through the four steps.
This installation is empty	There are no qualifications and no learners yet. Dismiss it with the cross.	Add a qualification, then learners.
Add your accreditation end date under Settings → Organisation…	No accreditation dates are recorded, so the system cannot warn you about expiry.	An Admin enters the dates (section 10).
Your QCTO accreditation ends in N days. Start the renewal process with the QCTO. (amber)	The end date is within 180 days.	Start renewal with the QCTO.
Your QCTO accreditation ended N days ago… (red)	The end date has passed.	Treat as urgent: see the QCTO and your SETA.

3. Learners: the list, adding, and enrolling in bulk

The **Learners** screen lists every learner record. Admins and Facilitator/Assessors can add and enrol; Moderators can look but not change. A learner who signs in sees only their own row, under the name **My progress**.

The Learners list

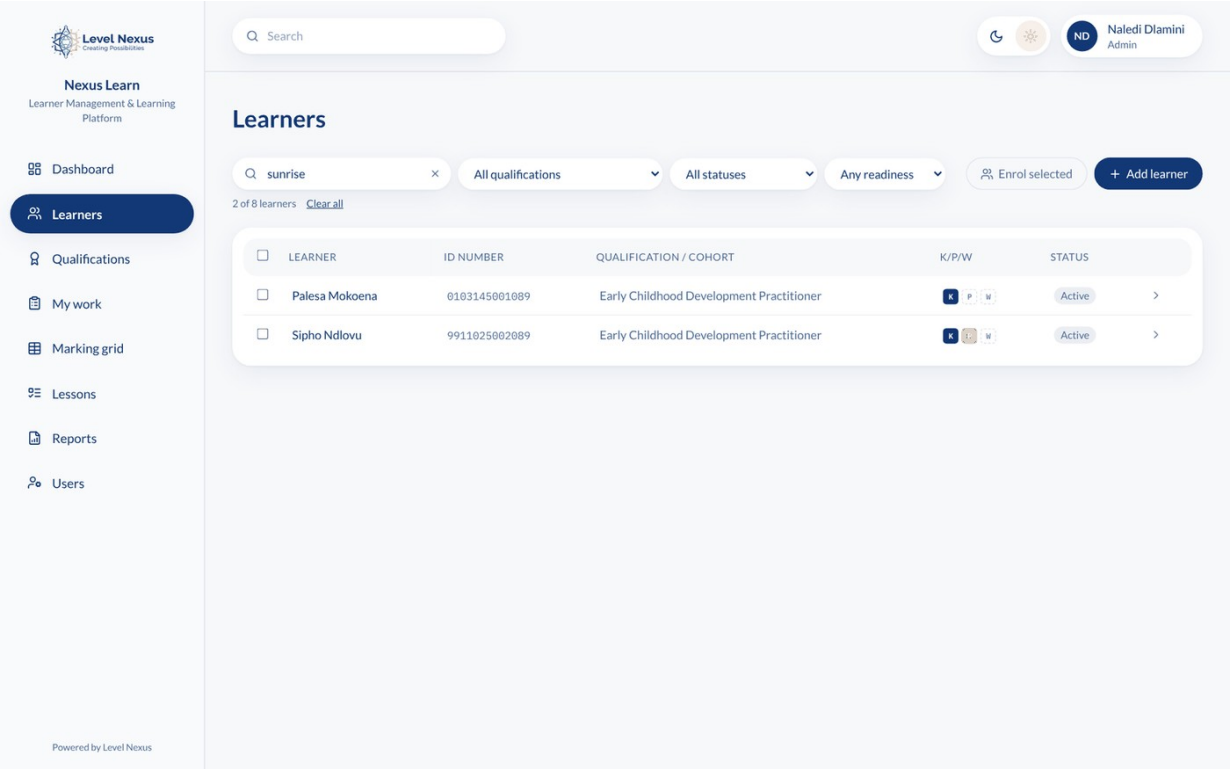

Reading the list

Column	What it shows
Learner	First and last name.
ID number	The learner's South African ID number, stored as text so a leading zero is never lost.
Qualification / cohort	The qualification(s) the learner is enrolled on, or *Not enrolled*.
K/P/W	Three small tiles for Knowledge, Practical skill and Work-based experience on the learner's first enrolment. A solid coloured tile means every module of that type is complete; an outlined tile means some are; a dashed tile means none yet; a small grey tile means the qualification has no modules of that type.
Status	The enrolment status (Active, On Hold, Withdrawn, Internally Complete, EISA Registered or Certified).

Click anywhere on a row to open the learner's profile (section 4). On a phone each learner is a card instead of a table row.

Searching and filtering

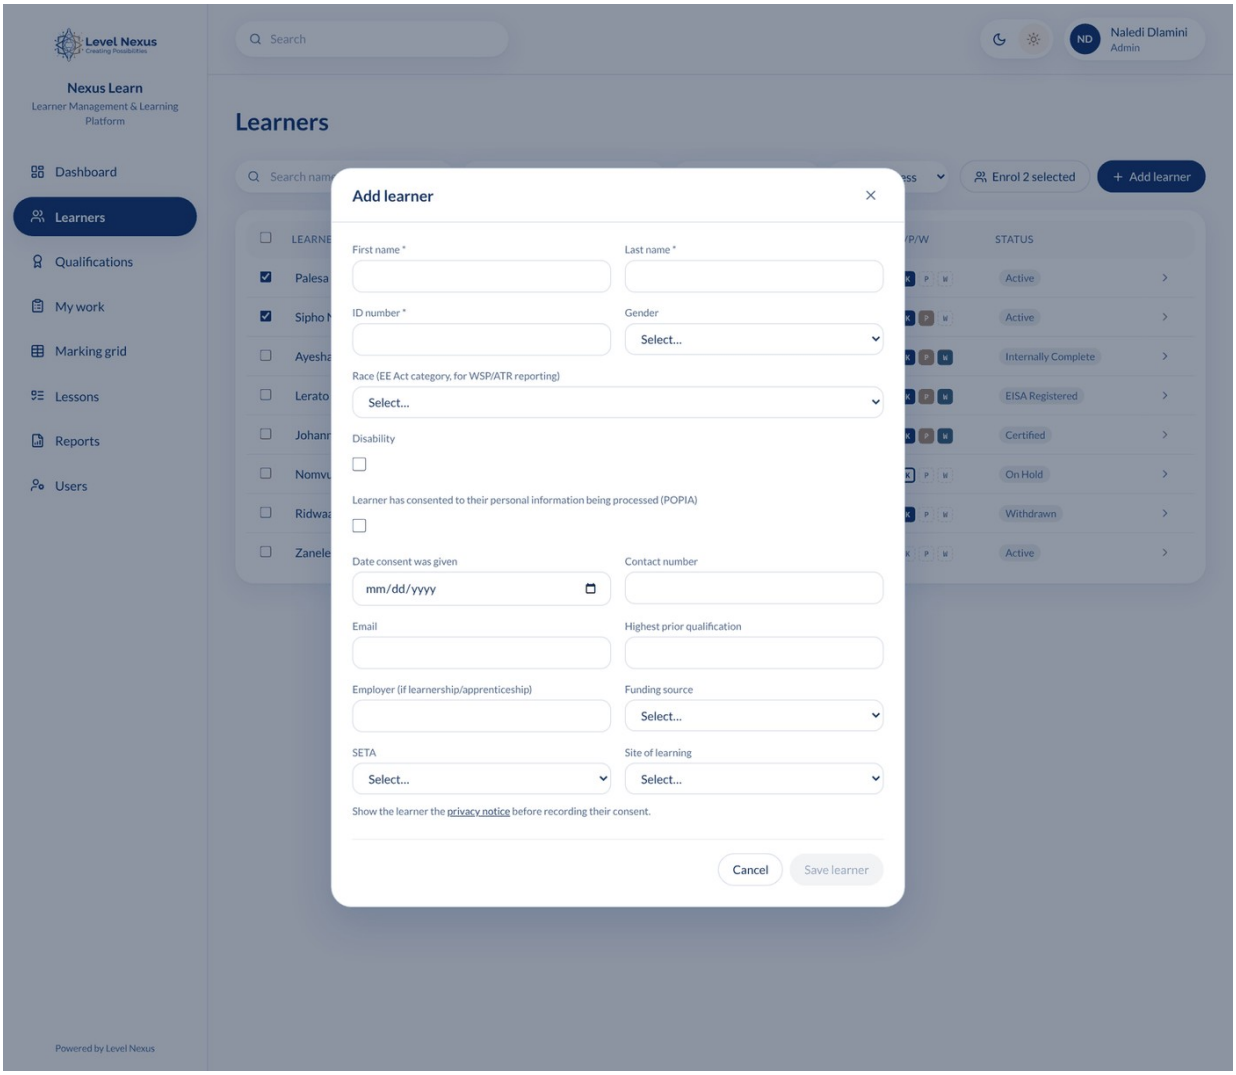

The line above the table reads *N of M learners*. The search box matches name, ID number, employer and site of learning, so *Sunrise* finds everyone placed at Sunrise Educare. Three dropdowns narrow the list further: **All qualifications**, **All statuses** and **Any readiness** (*Ready for EISA* or *Not yet ready*). Filters combine, and **Clear all** appears when any are on.

Searching the Learners list by employer

Adding a learner

1. Press **Add learner** (top right).
2. Fill in the form. **First name**, **Last name** and **ID number** are required; **Save learner** stays greyed out until all three are filled.
3. Press **Save learner**. The new learner appears in the list.

The Add learner form

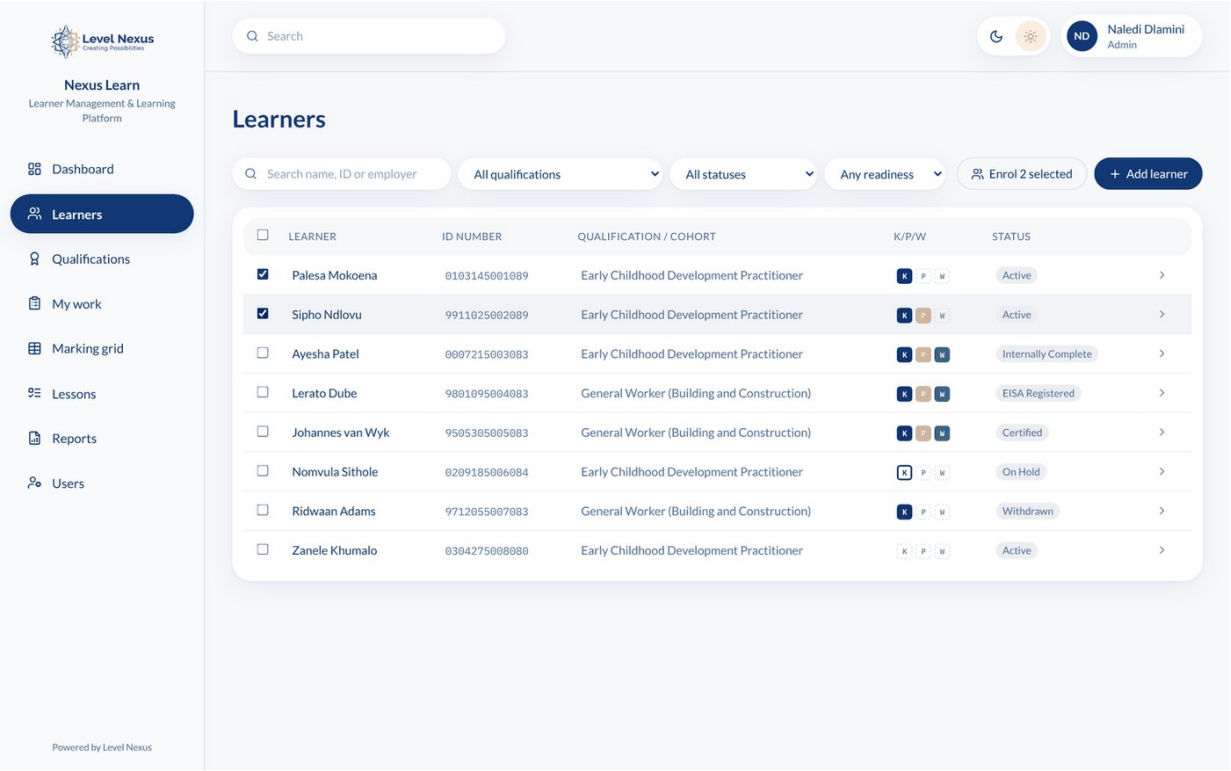

Field	Notes
Gender, Race (EE Act category, for WSP/ATR reporting), Disability	Used for the demographics and WSP/ATR reports.
Learner has consented to their personal information being processed (POPIA) and **Date consent was given**	Tick only after showing the learner your privacy notice (a link to it sits under the form when an Admin has set the address). The date is recorded with the consent.
Contact number, Email, Highest prior qualification, Employer	Employer only applies to learnerships and apprenticeships.
Funding source, SETA, Site of learning	Drop-downs when an Admin has set up those lists under Settings → Lists; otherwise plain text boxes.

The form does not check the ID number. It will accept a number of the wrong length or with a wrong check digit, and it will not warn you if the same ID is already on file. The *QCTO quarter pack* check under Reports (section 8) lists malformed ID numbers before anything is submitted, and the CSV import skips an ID that is already on file. Check the number against the learner's ID document as you type it.

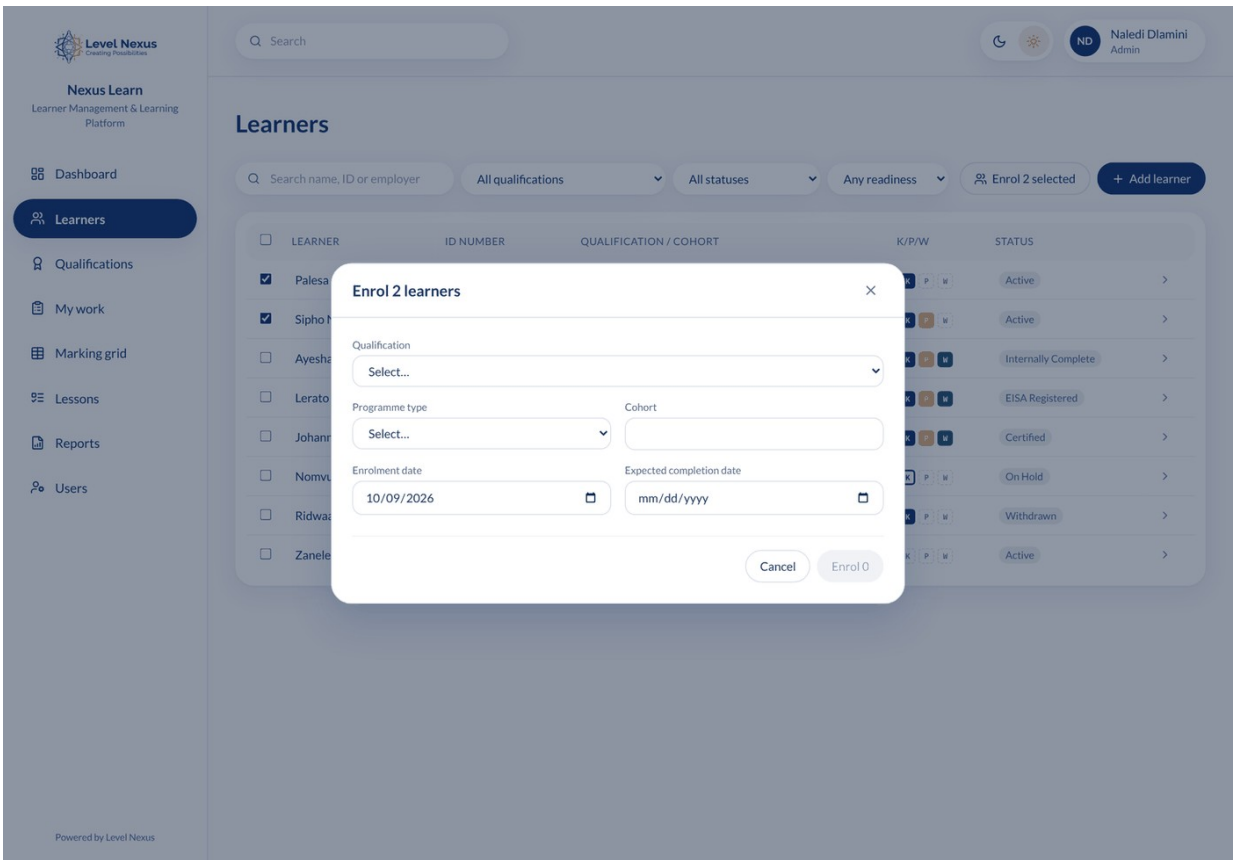

Enrolling several learners at once

1. Tick the box beside each learner (the box in the header ticks everyone shown by the current filters). The button changes to **Enrol 2 selected** (or however many you ticked).
2. Press it. The **Enrol N learners** window opens.

3. Choose the **Qualification**, then **Programme type**, **Cohort**, **Enrolment date** (today by default) and, if known, **Expected completion date**.
4. The window tells you how many **will be enrolled** and lists anyone who will be **skipped** and why (for example, already enrolled on that qualification). If the qualification is outside your accredited scope, or past its last date for new enrolments, a red message explains and **Enrol** stays disabled.
5. Press **Enrol N**. Nothing is saved until you do.

Learners ticked, with Enrol 2 selected enabled

The bulk enrol window

Many learners from a spreadsheet

To load a whole cohort at once, use **Settings → Data → Import learners (and enrolments) from CSV** (section 10). Admin only.

4. A learner's profile and their enrolments

The profile is where a learner's whole record lives: their details at the top, then one card for each qualification they are enrolled on. Open it by clicking a learner in the Learners list, in Needs attention on the Dashboard, in My work, or in Search. **Back to learners** returns you to the list.

The header

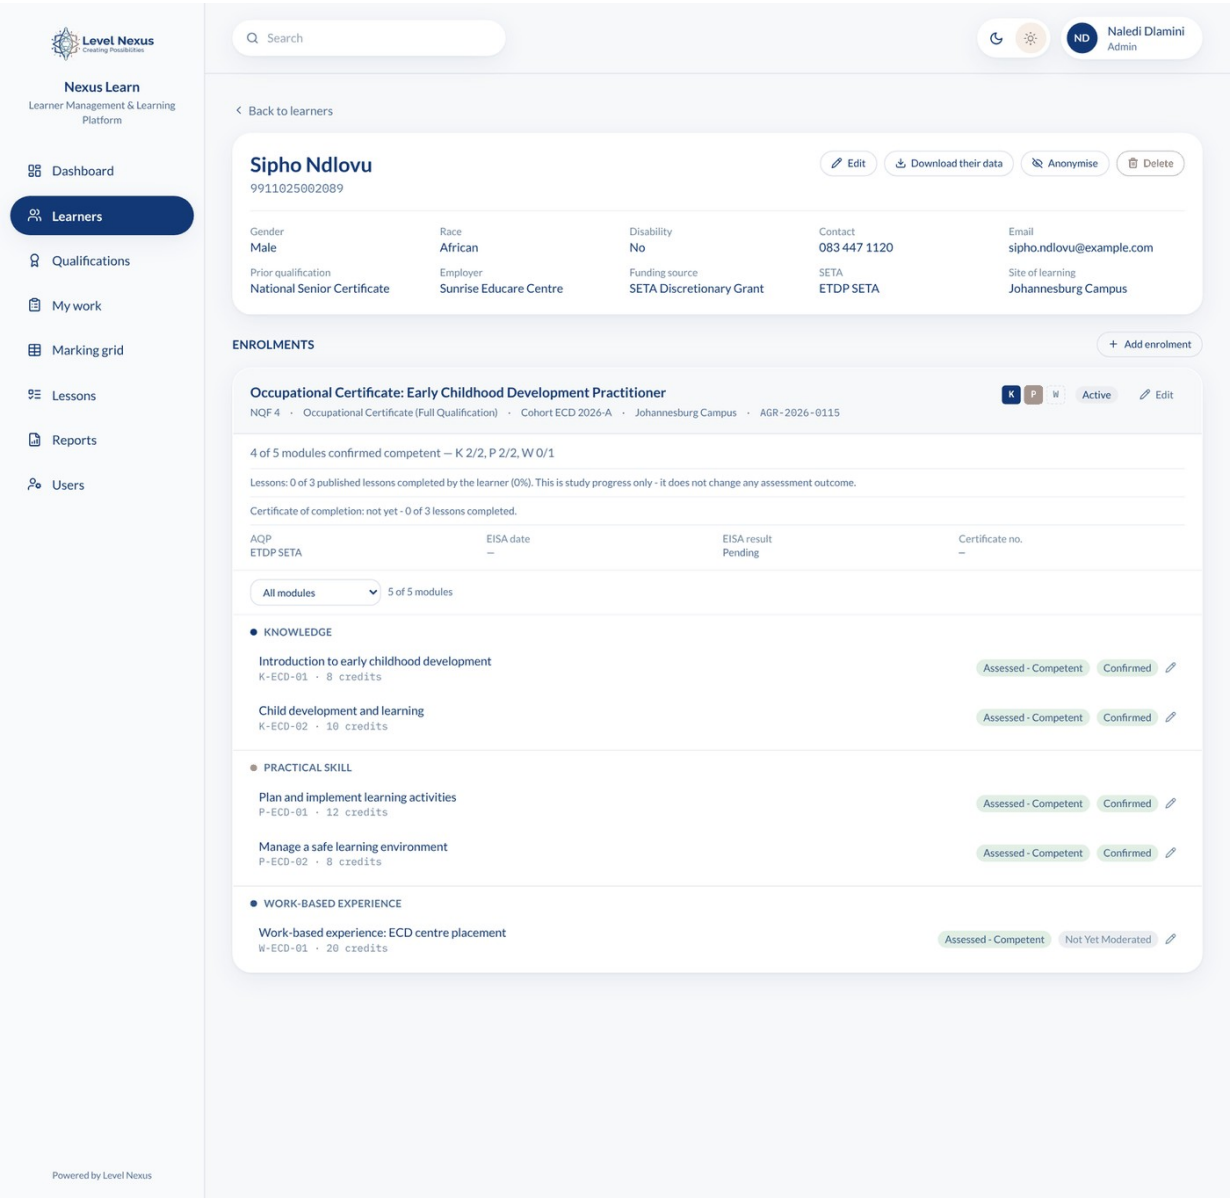

The header shows the name and ID number and ten details: gender, race, disability, contact number, email, prior qualification, employer, funding source, SETA and site of learning. Buttons at the top right depend on your role:

Button	Who sees it	What it does
Edit	Admin, Facilitator/Assessor	Opens the same form as Add learner.
Download their data	Admin, Facilitator/Assessor	Saves a JSON file named `learner-data-<id>-<date>.json` holding everything the system keeps about the learner: record, enrolments, results, lesson progress and certificates. Use it to answer a POPIA request for a copy of their information.
Anonymise	Admin	Permanently removes the learner's identity. See below.
Delete	Admin	Removes the learner and their enrolments after a confirmation. It cannot be undone.

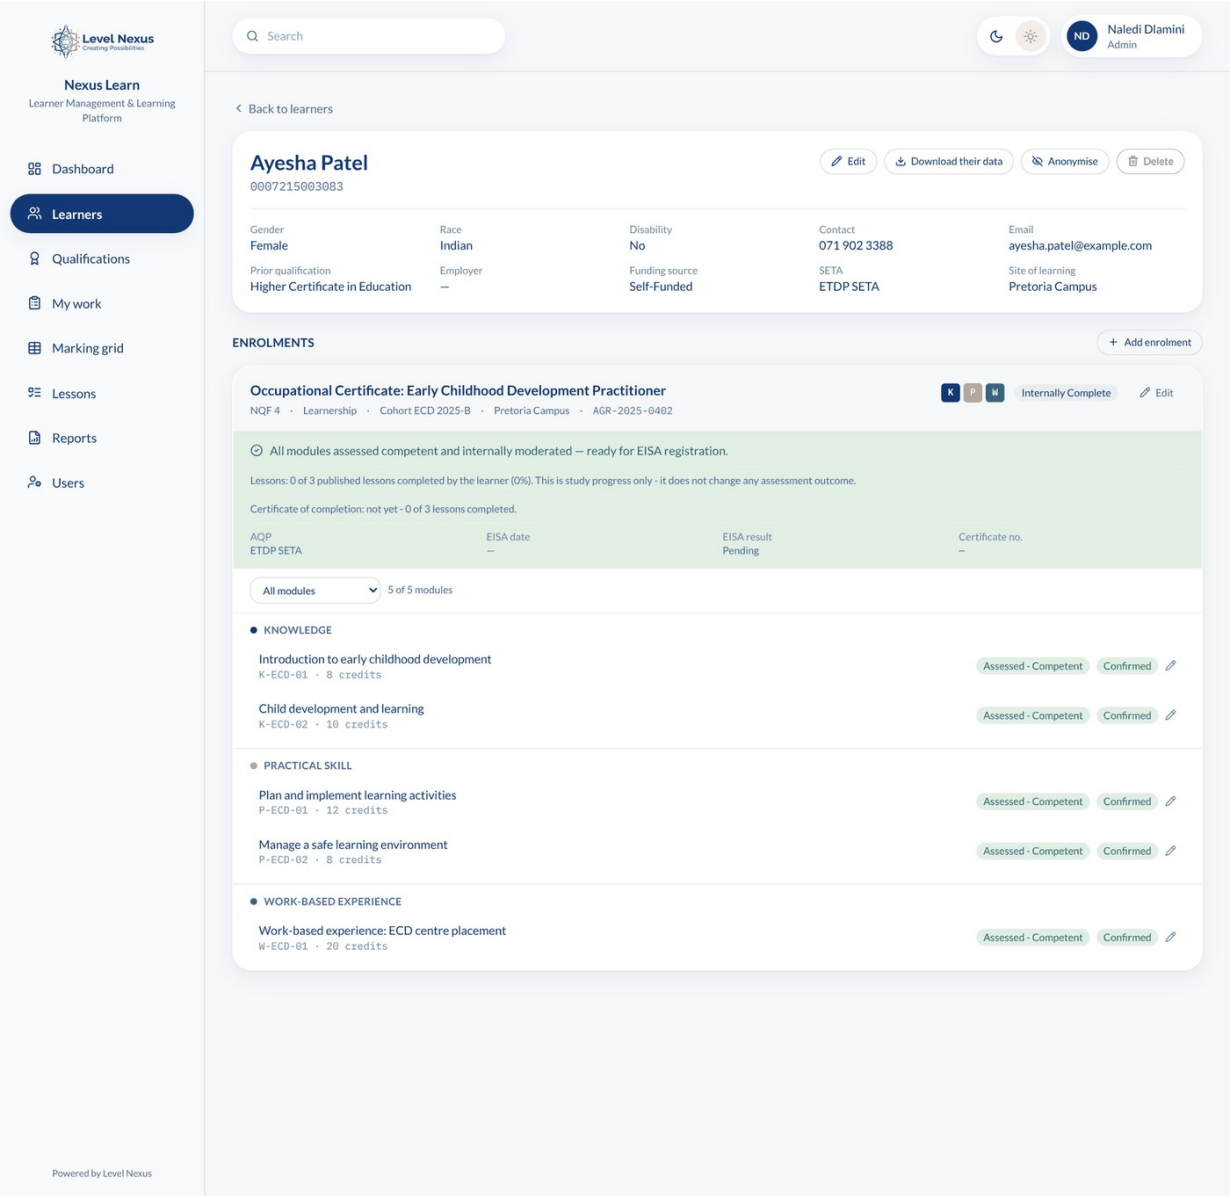

An enrolment card

Each card is one learner on one qualification. From top to bottom:

1. **Heading line.** The qualification title; NQF level, programme type, cohort, site of learning and agreement number; the **K/P/W** tiles (as in section 3); the enrolment status; and **Edit**.
2. **Readiness band.** While modules are outstanding it reads, for example, *4 of 5 modules confirmed competent — K 2/2, P 2/2, W 0/1*. When every module is complete the band turns green and says *All modules assessed competent and internally moderated — ready for EISA registration*. A module counts as complete only when its assessment is **Assessed - Competent** and, unless an Admin has relaxed the rule under Settings → Rules, its moderation is **Confirmed**.
3. **Lessons and certificate lines.** How many published lessons the learner has completed, and either the certificate of completion or the **Issue certificate** button (section 7).
4. **EISA block.** Once the status is EISA Registered or Certified (or an AQP is recorded), the AQP, EISA date, EISA result and certificate number are shown.
5. **Module filter.** *All modules*, *Needs attention*, *Not yet assessed*, *Awaiting moderation* or *Complete*, with a count such as *5 of 5 modules*.
6. **The modules**, grouped under Knowledge, Practical Skill and Work-Based Experience. Each row shows the code, credits, an assessment badge and a moderation badge. Click a row to open that module's assessment form (section 6).

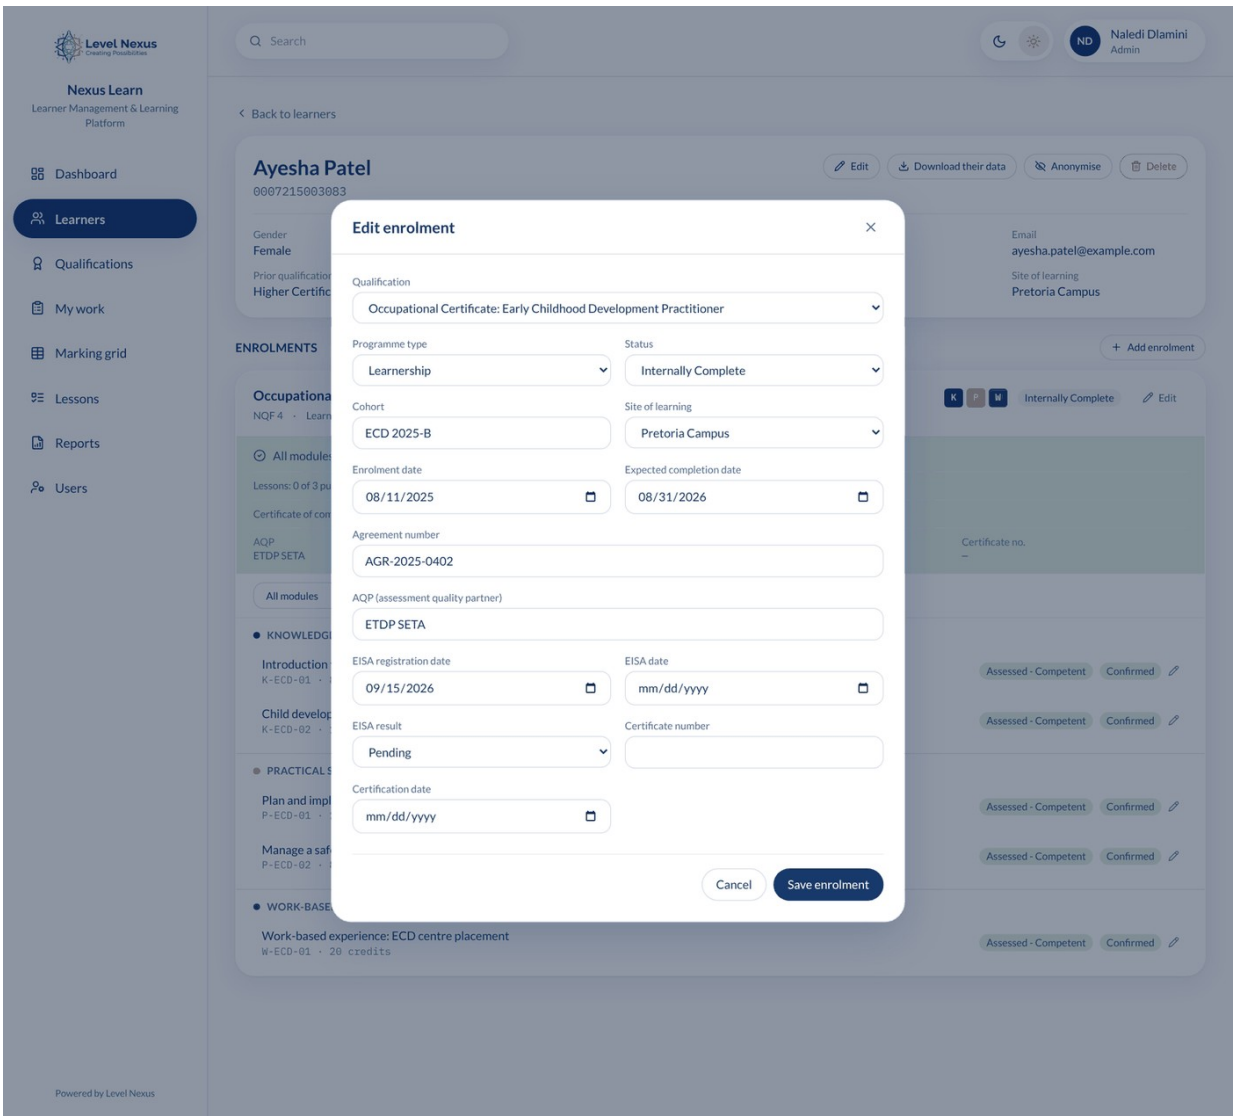

A learner held back from EISA: 4 of 5 modules confirmed, one still awaiting moderation

A learner who is ready for EISA registration

Enrolling a learner on a qualification

1. On the profile press **Add enrolment** (above the cards).
2. Choose the **Qualification**. If it is marked as outside your accredited scope, or its last date for new enrolments has passed, a red message says so and **Save enrolment** stays disabled. Existing enrolments on such a qualification stay editable.
3. Fill in the rest and press **Save enrolment**.

The Edit enrolment form

Field	Notes
Qualification, Programme type, Cohort, Site of learning	Programme type and site are drop-downs when an Admin has set up those lists.
Status	Active, On Hold, Withdrawn, Internally Complete, EISA Registered or Certified. Withdrawn and Certified enrolments drop out of the Dashboard's Active Enrolments count.
Enrolment date, Expected completion date	The enrolment date defaults to today. Once the expected date passes, an Active enrolment appears in Needs attention.
Agreement number, AQP	The learnership agreement number and the assessment quality partner.
EISA registration date, EISA date, EISA result (Pending, Competent, Not Yet Competent)	Fill these as the external assessment happens. Entering an EISA registration date on an Active or Internally Complete enrolment moves its status to **EISA Registered** automatically, unless you changed the status in the same edit.
Certificate number, Certification date	The QCTO's certificate details, once it has issued one. The system does not issue these; the certificates in section 7 are different.

Only Admins and Facilitator/Assessors can save enrolment changes.

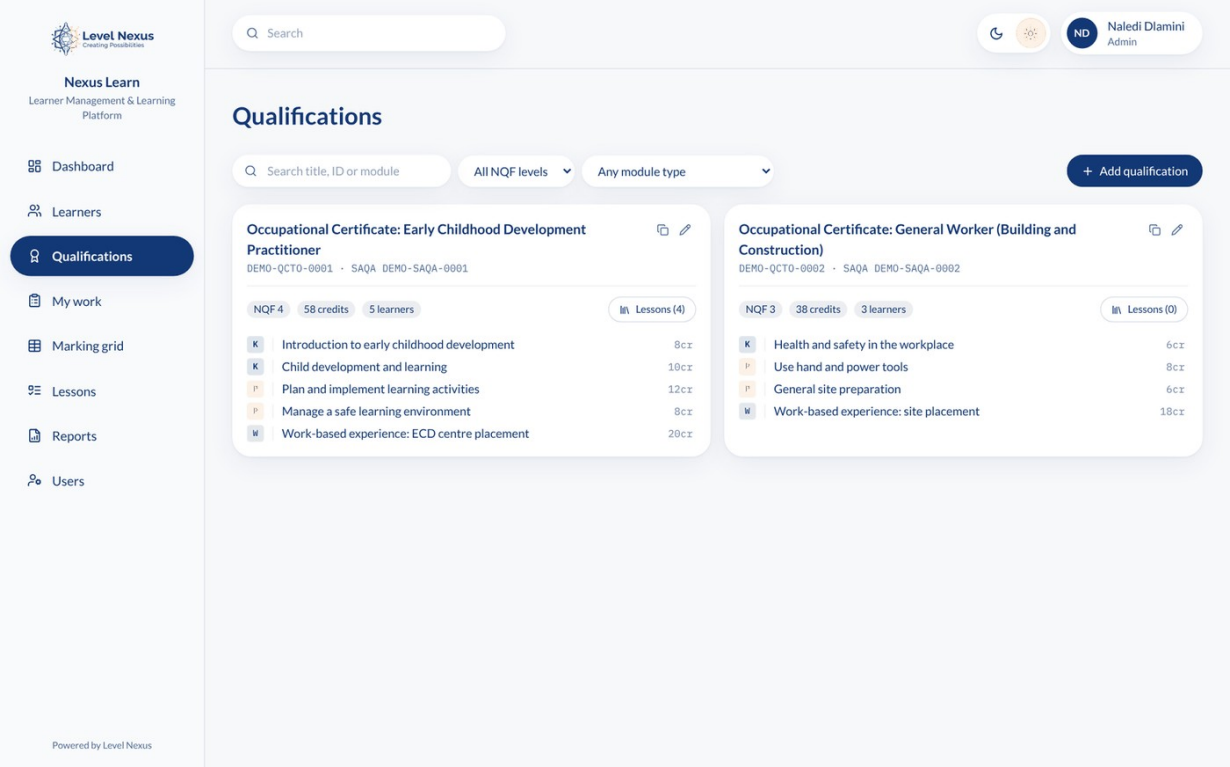

Anonymising a learner

Anonymise is for POPIA erasure requests and for records past the retention period. It asks you to type **ANONYMISE** to confirm. The dialog first tells you whether the record is still inside your retention period (set under Settings → Organisation) and warns you not to continue if the QCTO, a SETA or a funder may still need it. It then removes the name, ID number, contact details and demographics, plus the evidence notes, evidence links, appeal notes and attempt notes on the learner's results, any queued emails to them, and their login profile (which is deactivated). Enrolments and outcomes stay, but without a name they can no longer be submitted against a person.

> **Anonymising does not reach everything.** The dialog lists what needs separate handling: the sign-in account itself in Firebase Authentication, any certificate that carries the learner's name, any file in a shared Drive folder, and stored backup snapshots, which keep the record as it was until they age out or are deleted.

5. Qualifications and their modules

A qualification is the thing you are accredited to deliver. Each one holds its modules, and every module is Knowledge (K), Practical skill (P) or Work-based experience (W). Everyone except learners can see this screen; only **Admins** can add, copy or edit a qualification.

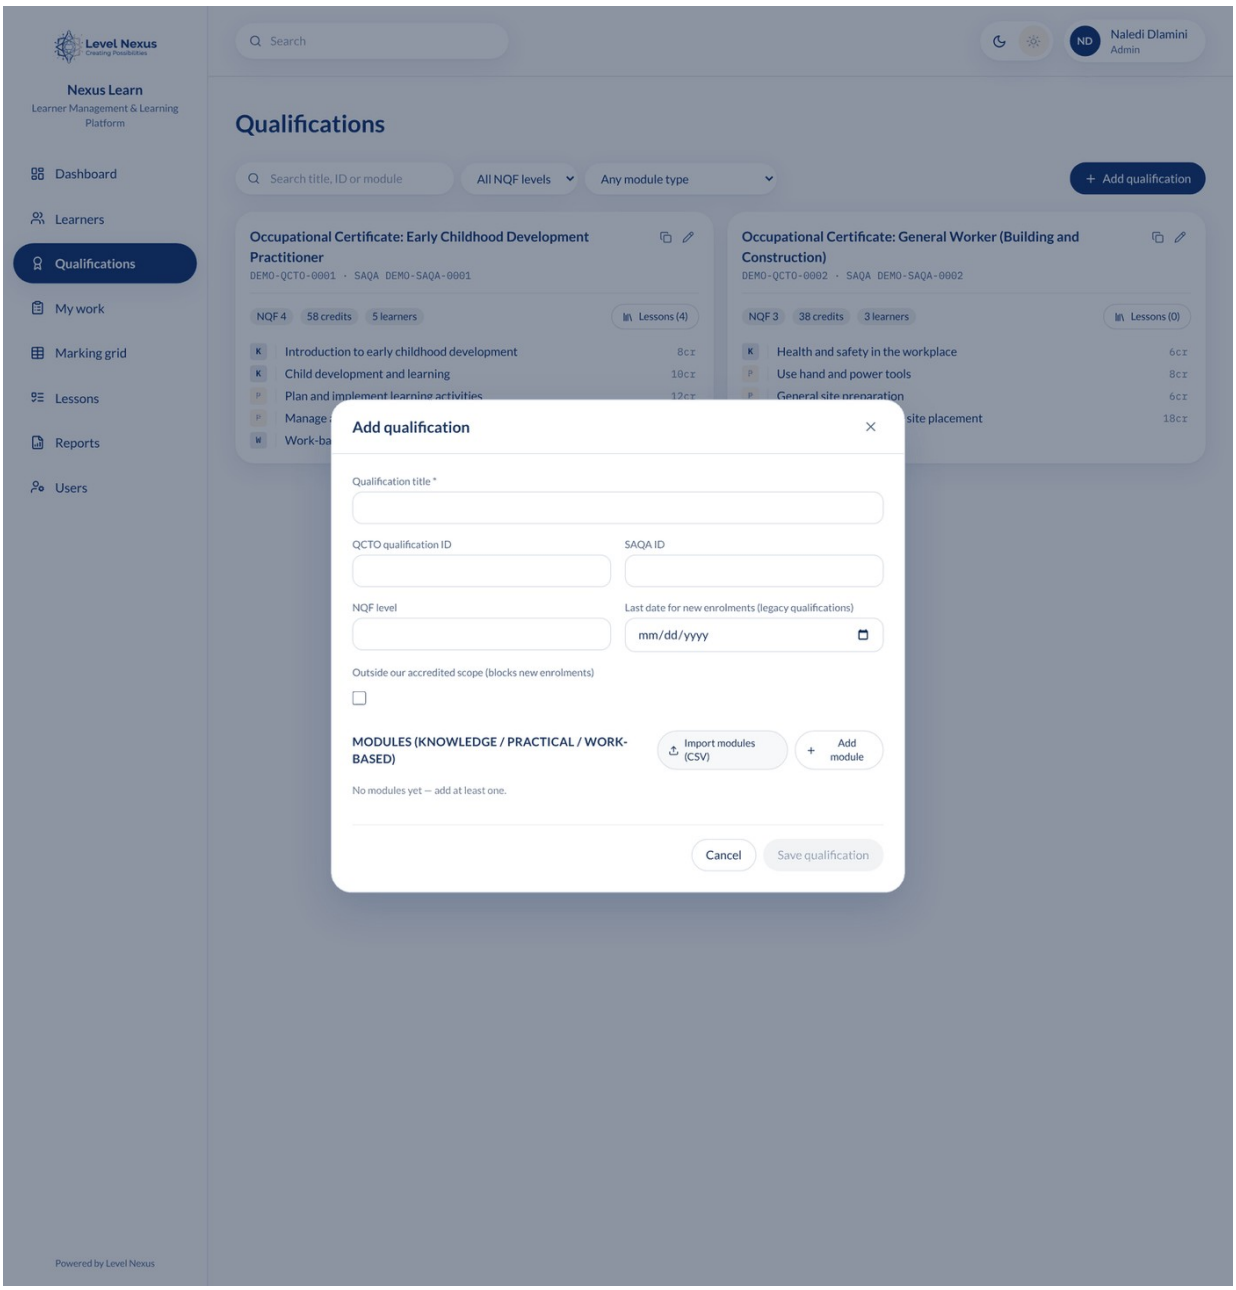

The Qualifications screen

Each card shows the title, the QCTO ID and SAQA ID, badges for NQF level, total credits and number of enrolled learners, a **Lessons (n)** button that opens that qualification's lessons (section 7), and the module list with its credits. The search box matches the title, QCTO ID, SAQA ID, and any module code or title, so you can find a qualification from a module you remember. Two dropdowns filter by NQF level and by whether the qualification has Knowledge, Practical or Work-based modules.

Adding a qualification (Admin)

1. Press **Add qualification**.
2. Enter the **Qualification title** (required), **QCTO qualification ID**, **SAQA ID** and **NQF level**. Copy the IDs, module codes and credits from your accreditation letter; they appear on every submission.
3. Add the modules. Press **Add module** for each one and choose its type (Knowledge, Practical or Work-Based), then fill in the module code, title and credits. To load many at once, press **Import modules (CSV)** and choose a file with the columns `type` (Knowledge, Practical or Work-based), `code`, `title` and `credits`. Imported modules are added to the end of the list, and any rows that could not be read are listed so you can fix them.
4. Press **Save qualification**. It stays greyed out until there is a title and at least one module.

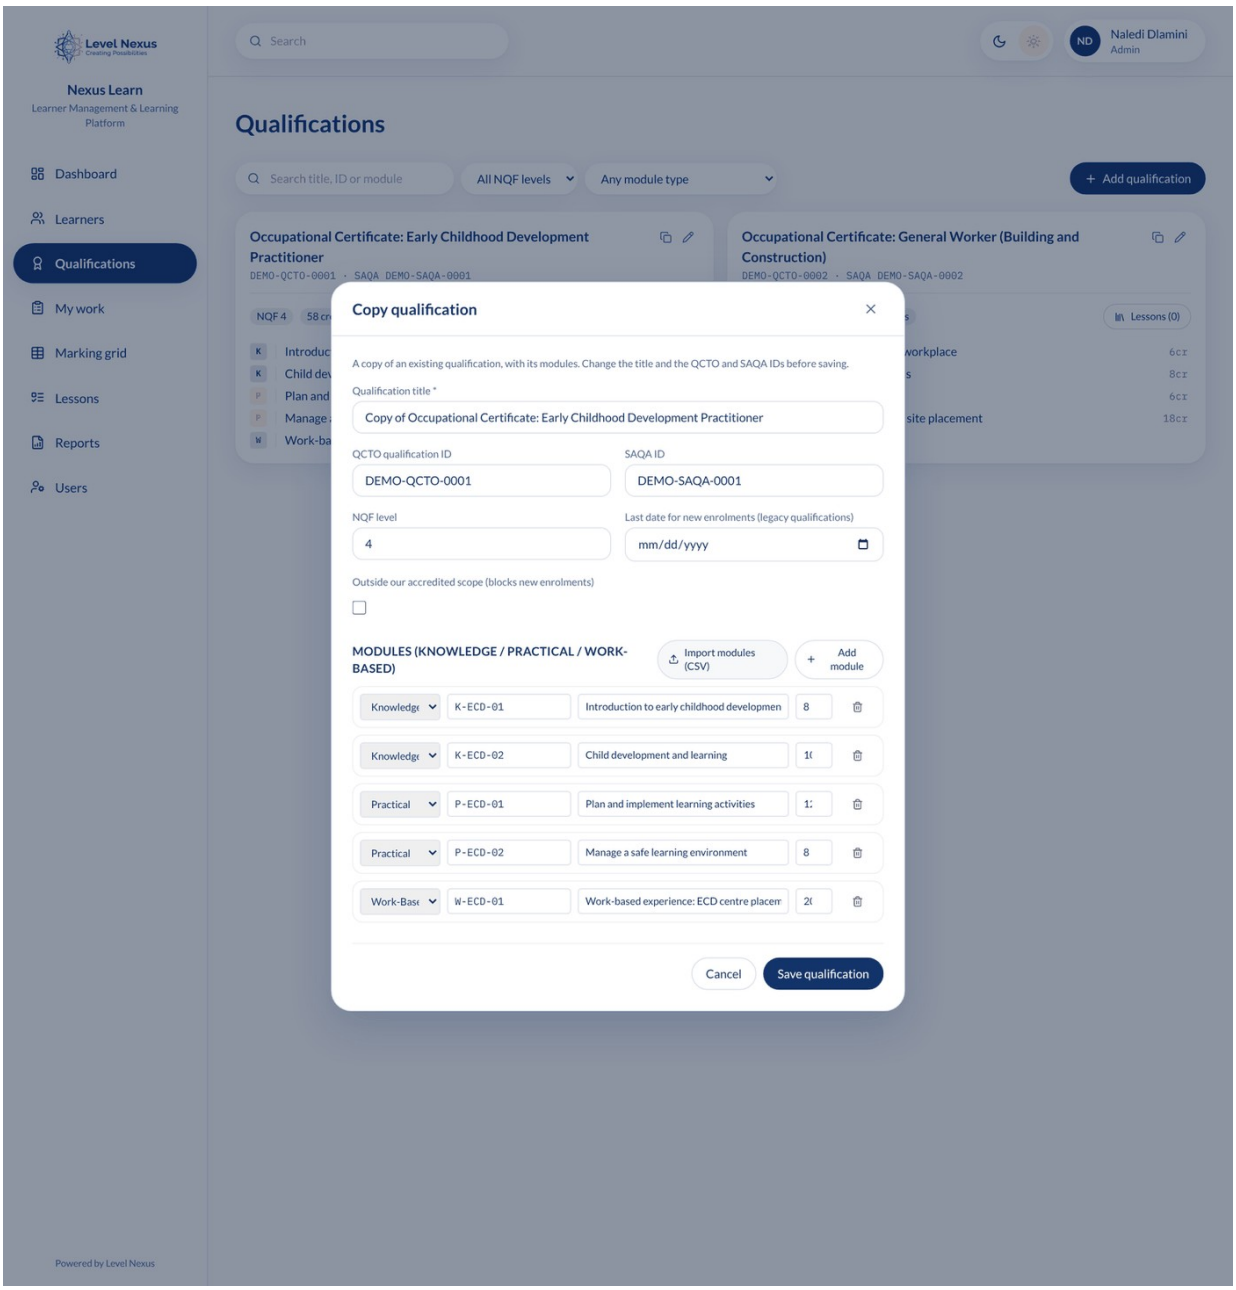

The Add qualification form

Two settings that control who can be enrolled

Setting on the form	Effect
Outside our accredited scope (blocks new enrolments)	Tick this for a qualification you are not accredited to deliver. New enrolments on it are refused, with the reason shown. Existing enrolments stay editable.
Last date for new enrolments (legacy qualifications)	For a qualification being phased out. After this date no new enrolment can be made on it. Check the date in the notice from your SETA or the QCTO.

Copying a qualification

The copy icon on a card makes a new qualification from an existing one, with all its modules. Change the title and the QCTO and SAQA IDs before saving, so the copy is not mistaken for the original.

Copying a qualification: the title reads “Copy of …” until you change it

Editing a qualification (Admin)

The pencil icon opens the same form. You can correct a title, ID or credit value, add modules, or remove them. Removing a module that already has assessments recorded against it does not delete those records, but the module stops appearing in the Module progress report, which leaves a hole in your audit trail. The form therefore warns you (*This removes assessment records from every report*, listing the modules) and changes the button to **Save anyway**. Press it only if you are sure.

There is no button to delete a whole qualification. If one should no longer be used, tick **Outside our accredited scope** or set a last date for new enrolments.

6. Assessing, marking and moderating

A module is finished only after two different people have signed it off: an assessor records the result, then a moderator confirms it. This section follows that path in order.

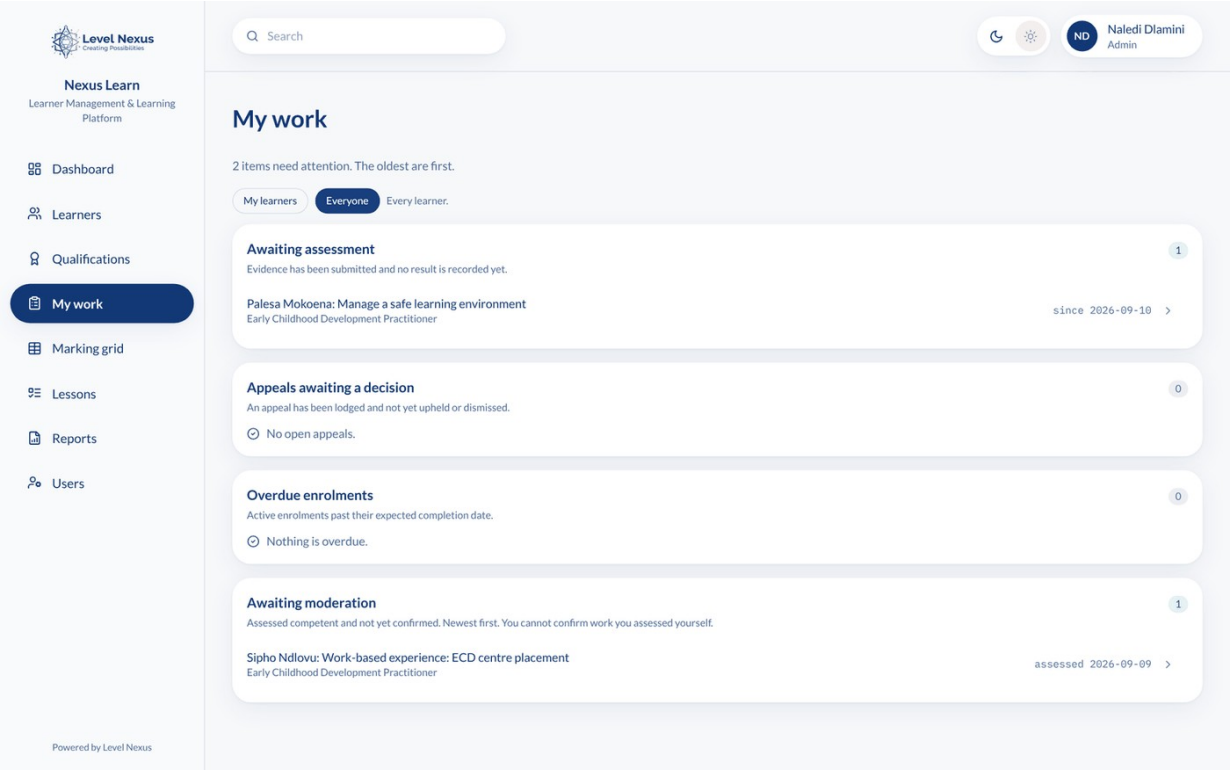

1. The learner submits evidence. The assessor records **Evidence Submitted** (or the learner's module simply stays *In Progress*).
2. The assessor records an outcome: **Assessed - Competent** or **Assessed - Not Yet Competent**, with an attempt entry. A learner who is not yet competent can be assessed again; each time adds another attempt.
3. A moderator reviews work marked competent and sets moderation to **Confirmed** (or **Not Confirmed - Review Required**). A moderator cannot confirm work they assessed themselves.
4. When every module in the qualification is complete, the enrolment becomes **EISA-Ready**. Registration for the external assessment is then recorded on the enrolment (section 4).

My work: your queue

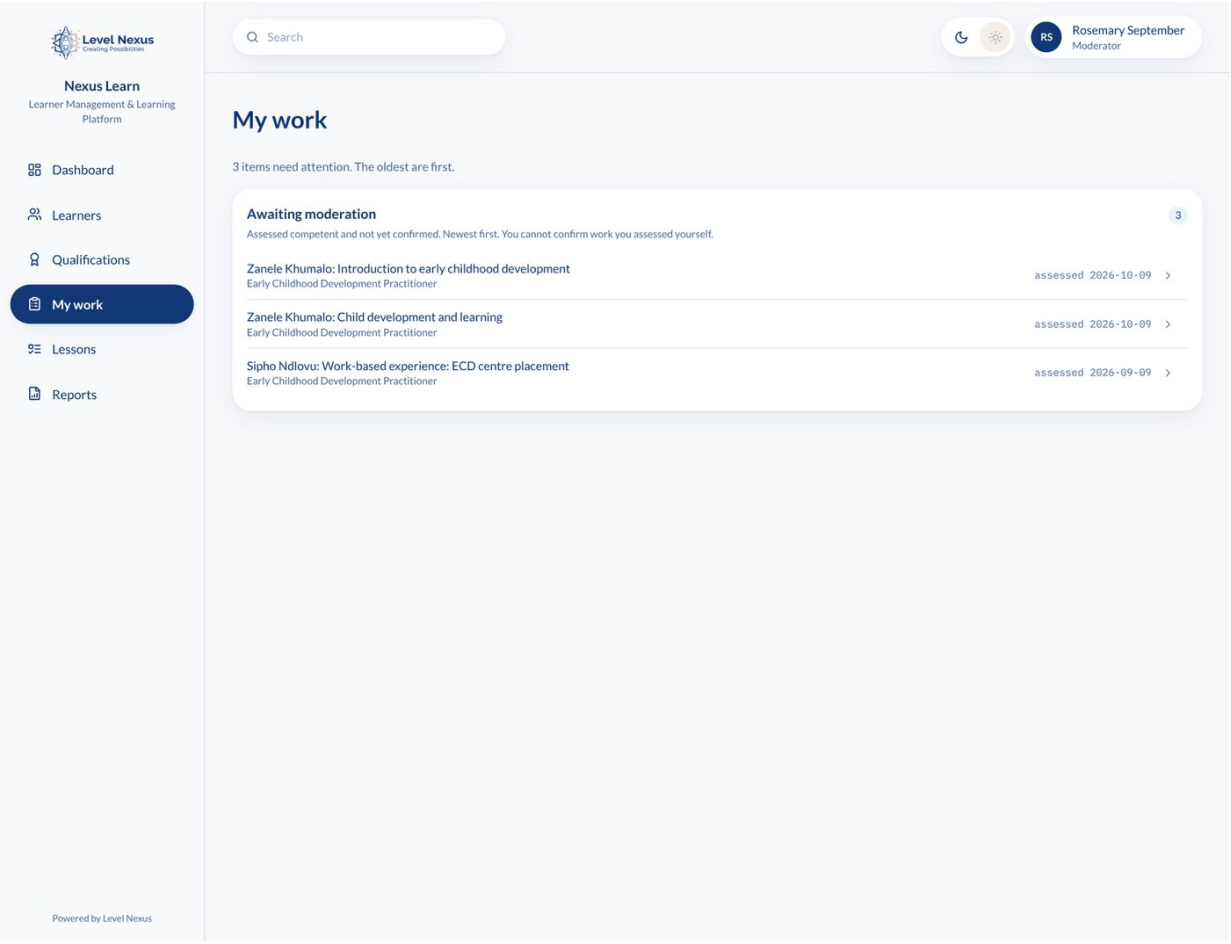

My work lists what needs a person, oldest first, under a line such as *2 items need attention. The oldest are first.* Click any row to open that module's form.

List	Who sees it	What is in it
Awaiting assessment	Admin, Facilitator/Assessor	Modules with evidence submitted and no result yet. Shows the date the evidence was submitted.
Appeals awaiting a decision	Admin, Facilitator/Assessor	Modules where an appeal is **Lodged** and not yet **Upheld** or **Dismissed**.
Overdue enrolments	Admin, Facilitator/Assessor	Active enrolments past their expected completion date. Opens the learner.
Awaiting moderation	Admin, Moderator	Modules assessed competent and not yet confirmed, newest first. A **You assessed this** tag marks work you cannot confirm; **Review required** marks work a moderator did not confirm.

Assessors can switch between **My learners** (learners you have assessed, plus evidence nobody has picked up yet, so nothing falls between people) and **Everyone**.

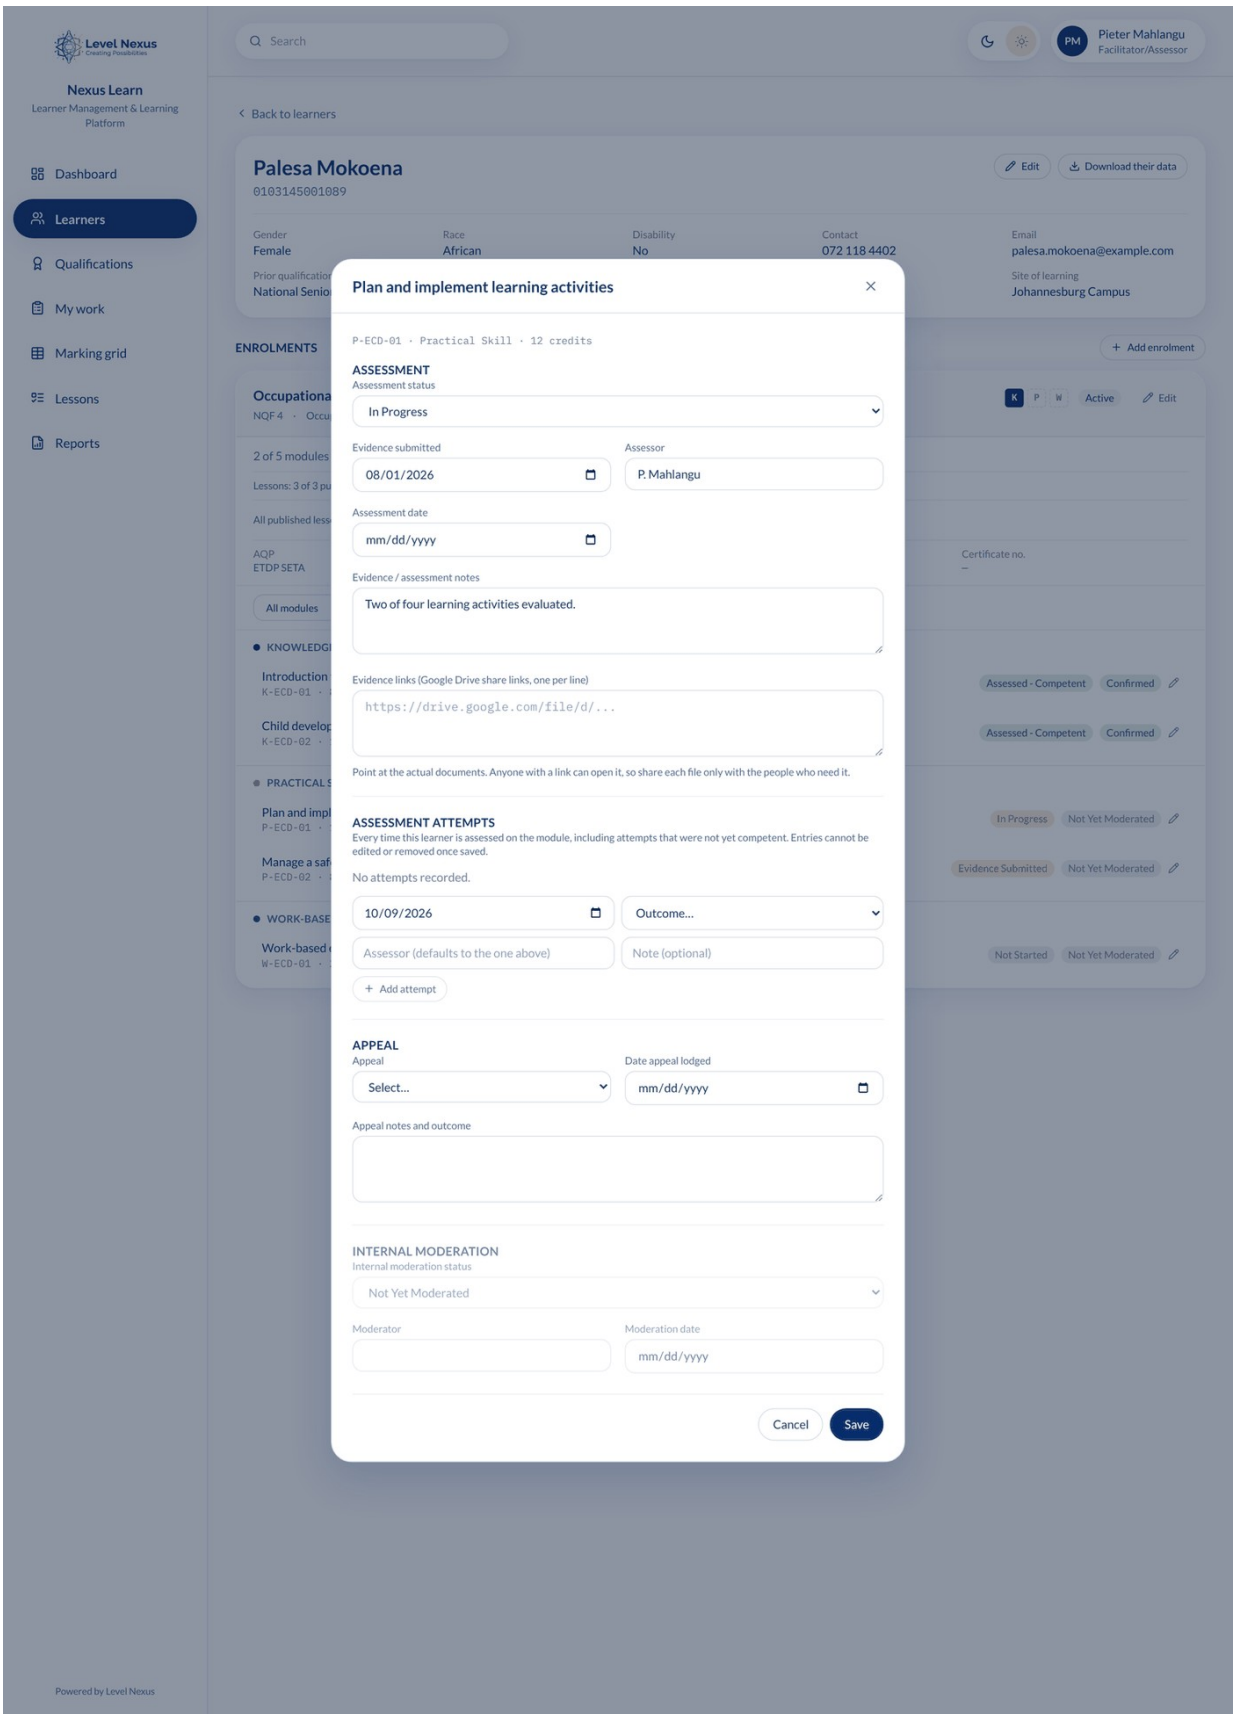

My work as an Admin, with the My learners and Everyone switch

My work as a Moderator

Recording an assessment

Open the learner's profile, then click the module (or click its row in My work). The module form opens. Admins and Facilitator/Assessors can change the **Assessment** and **Appeal** parts; the **Internal moderation** part is greyed out for them.

The module form as an assessor sees it: Assessment, attempts, Appeal, and a greyed-out Internal moderation

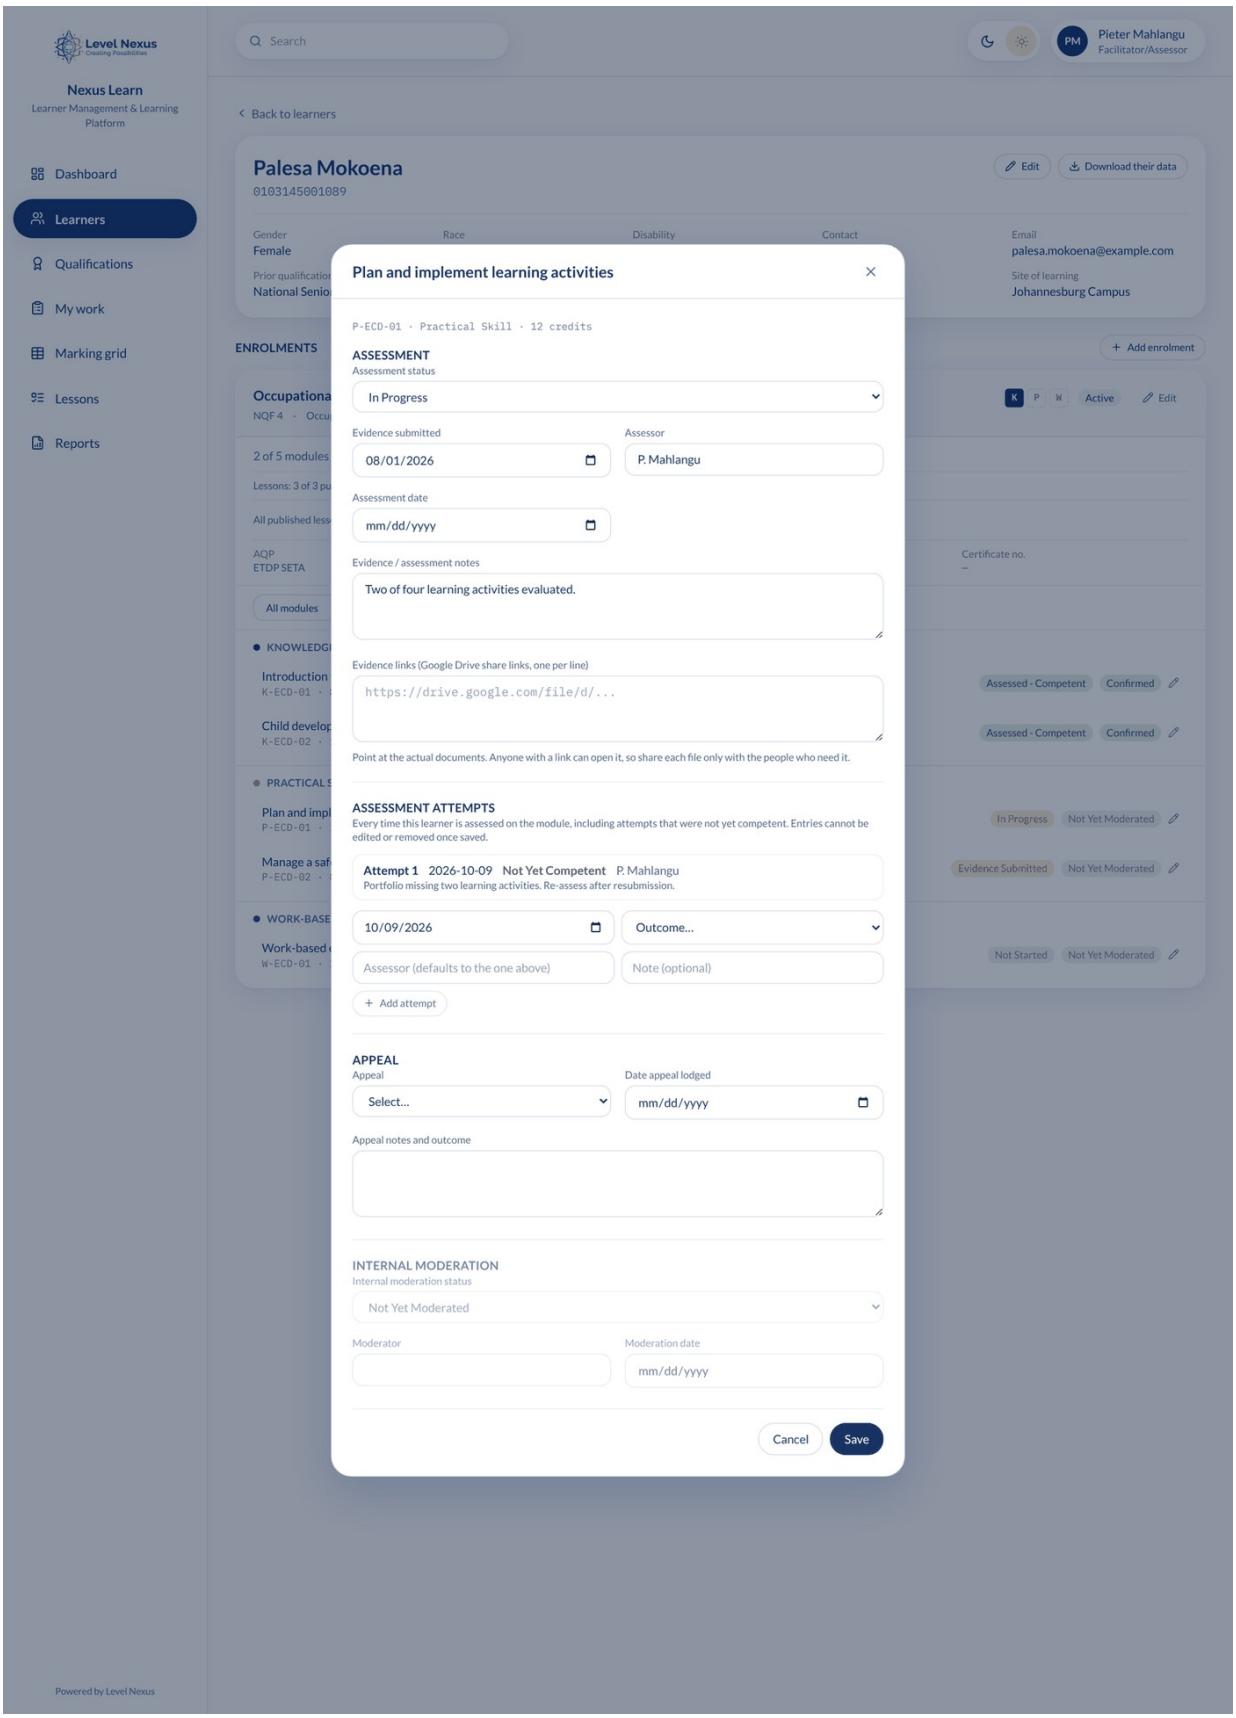

1. Set **Assessment status**: Not Started, In Progress, Evidence Submitted, Assessed - Competent or Assessed - Not Yet Competent.
2. Fill in **Evidence submitted** (date), **Assessor**, **Assessment date** and **Evidence / assessment notes**. For a Work-based module there is also **Logged workplace hours**.

3. Under **Evidence links**, paste Google Drive share links to the actual documents, one per line. A link that is not a valid Drive address is flagged and blocks saving. Anyone holding a link can open the file, so share each file only with the people who need it.
4. Record the attempt (next block).
5. Press **Save**. If you leave the assessment date blank on an assessed module it is filled with today's date, and a blank assessor is filled with your name.

Assessment attempts

The attempts list is the history of every time this learner was assessed on the module, including the attempts that were not yet competent. To add one, choose the date, the **Outcome** (Competent or Not Yet Competent), the assessor (defaults to the one above) and an optional note of up to 500 characters, then press **Add attempt**. It appears as *Attempt 1*, *Attempt 2* and so on.

> **Attempts cannot be edited or removed once saved**, and a module holds at most 10. Adding an attempt does not change **Assessment status**; set the status yourself so the two agree.

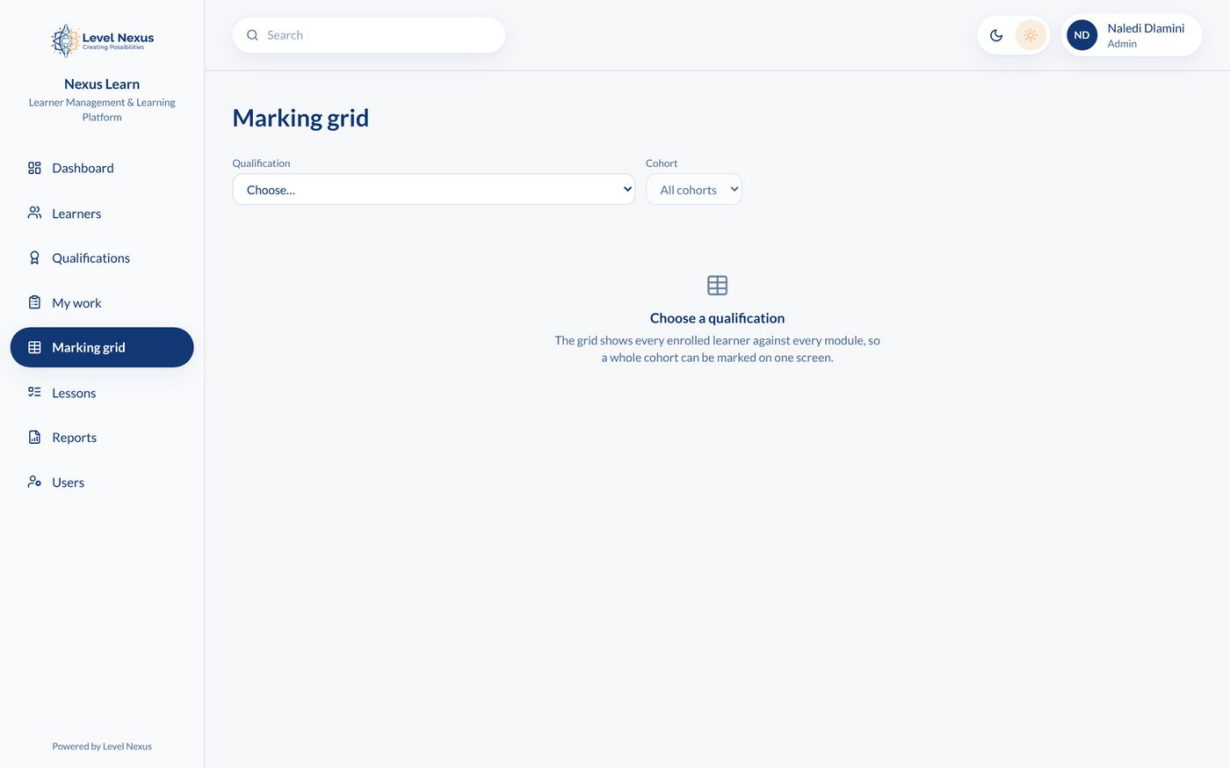

An attempt added: Attempt 1, Not Yet Competent, with a note

Appeals

If a learner appeals a result, set **Appeal** to **Lodged**, enter the **Date appeal lodged**, and record the outcome in **Appeal notes and outcome**. The module then shows in *Appeals awaiting a decision* and the marking grid will not overwrite its result. When the appeal is decided, change Appeal to **Upheld** or **Dismissed**.

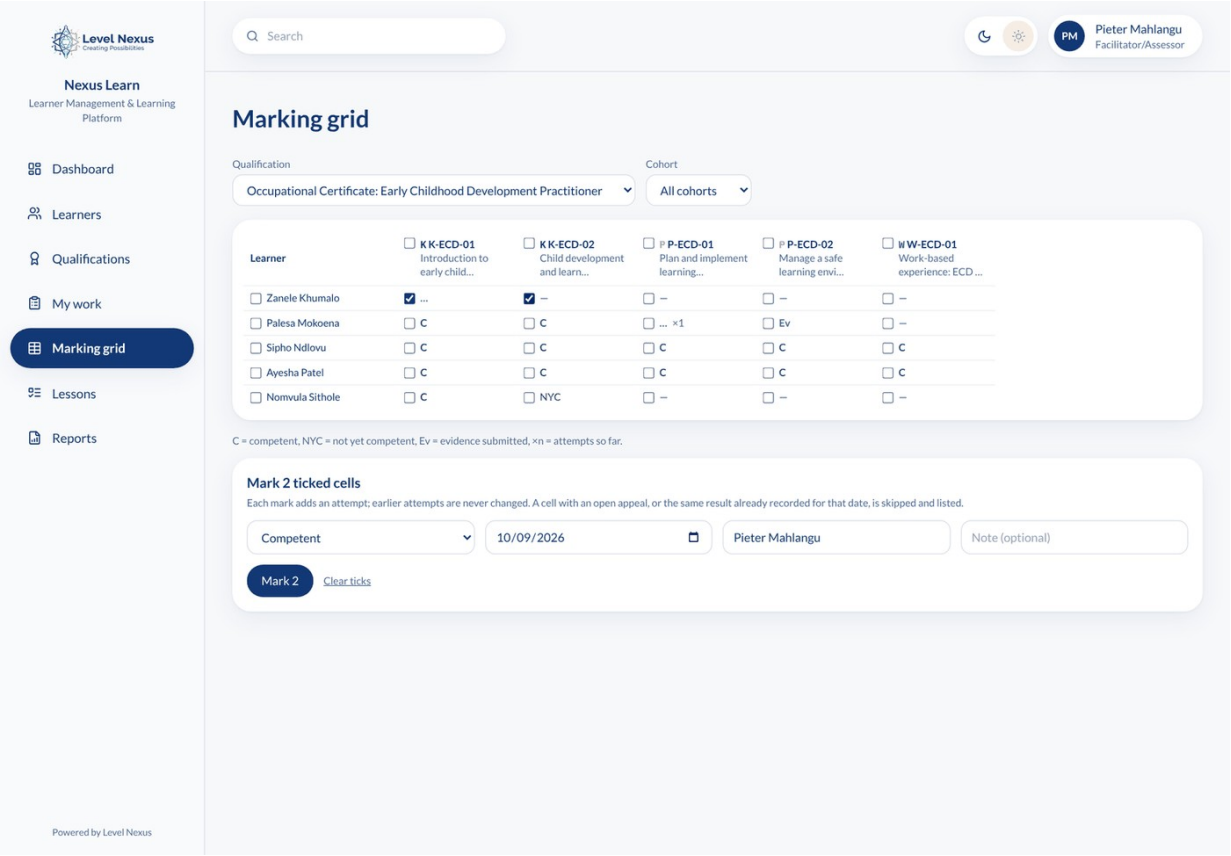

The marking grid: a whole cohort on one screen

For marking many learners at once, use **Marking grid** (Admins and Facilitator/Assessors).

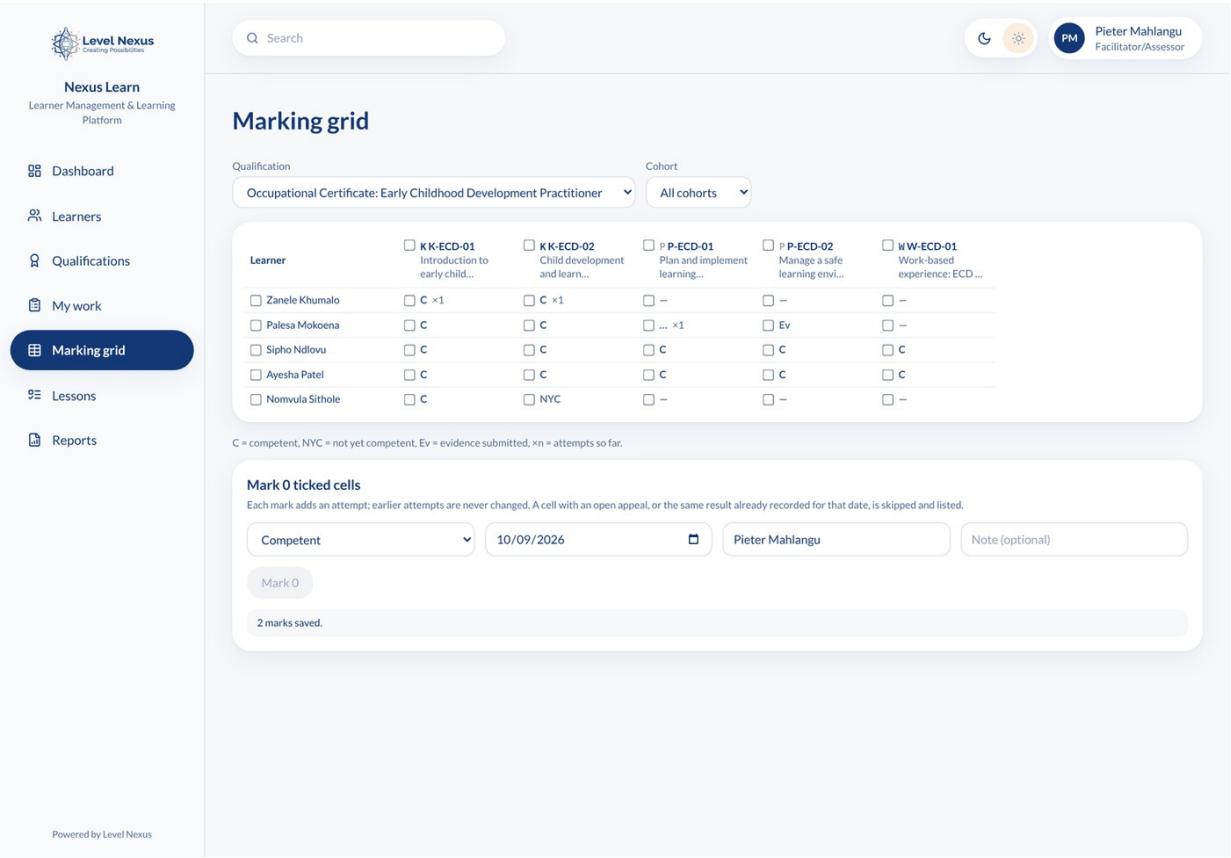

The Marking grid before a qualification is chosen

1. Choose a **Qualification**, and optionally a **Cohort**. Learners (not Withdrawn) run down the left, sorted by surname; modules run across the top.
2. Each cell shows the module's current result: **C** competent, **NYC** not yet competent, **Ev** evidence submitted, **…** in progress, **—** not started, and **×n** for the attempts so far.
3. Tick the cells to mark. The box beside a learner ticks every module for them; the box in a module's heading ticks every learner for it.
4. Under *Mark N ticked cells* choose the **Outcome**, the **Assessment date** (today by default), the **Assessor** (your name by default) and an optional **Note**.
5. Press **Mark N**. The message *N marks saved.* appears.

Two cells ticked, ready to mark

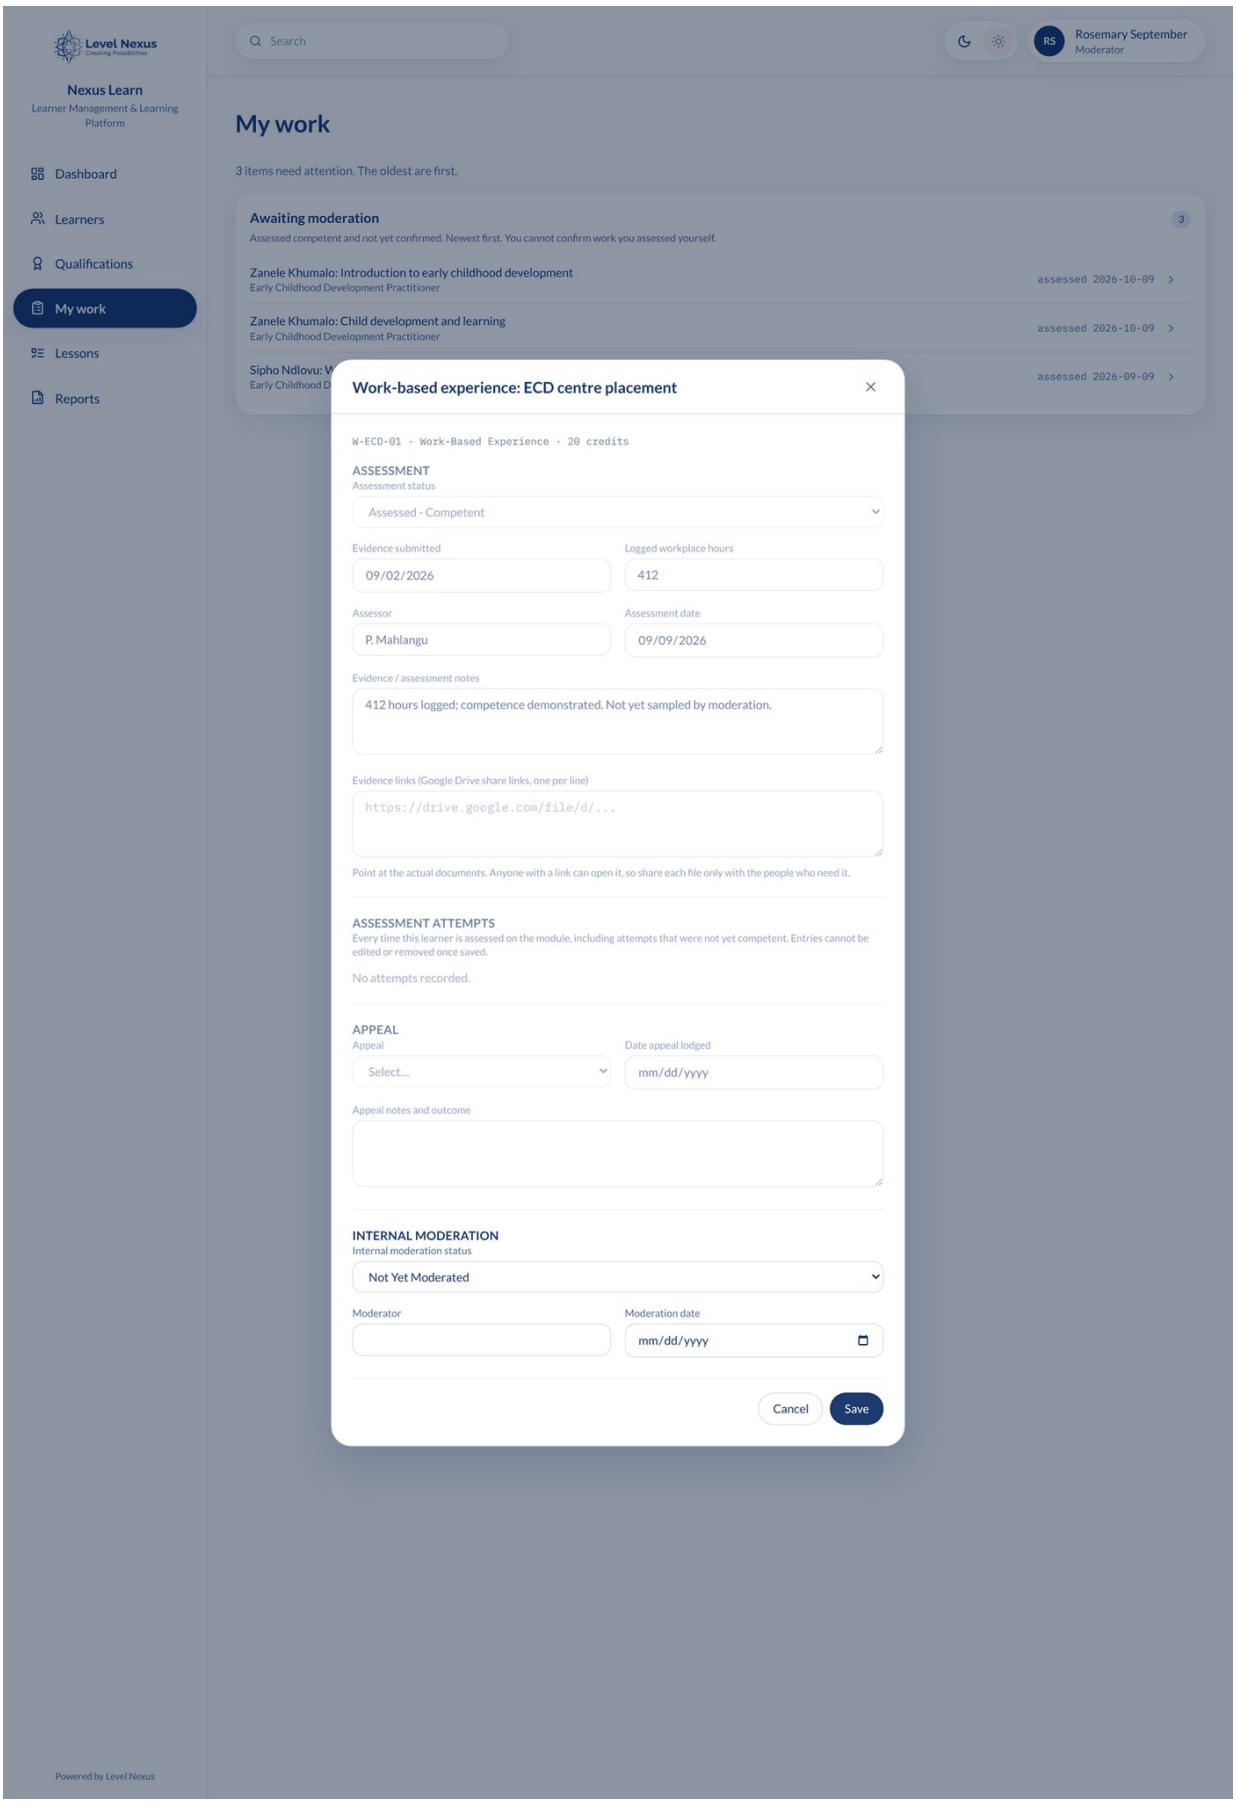

After marking: 2 marks saved, and the cells now show C ×1

Every mark adds an attempt and leaves earlier attempts alone. A cell is **skipped, and listed with the reason**, when it has an open appeal, when the same result is already recorded for that date, or when it has reached 10 attempts. The grid does not touch moderation.

Moderating

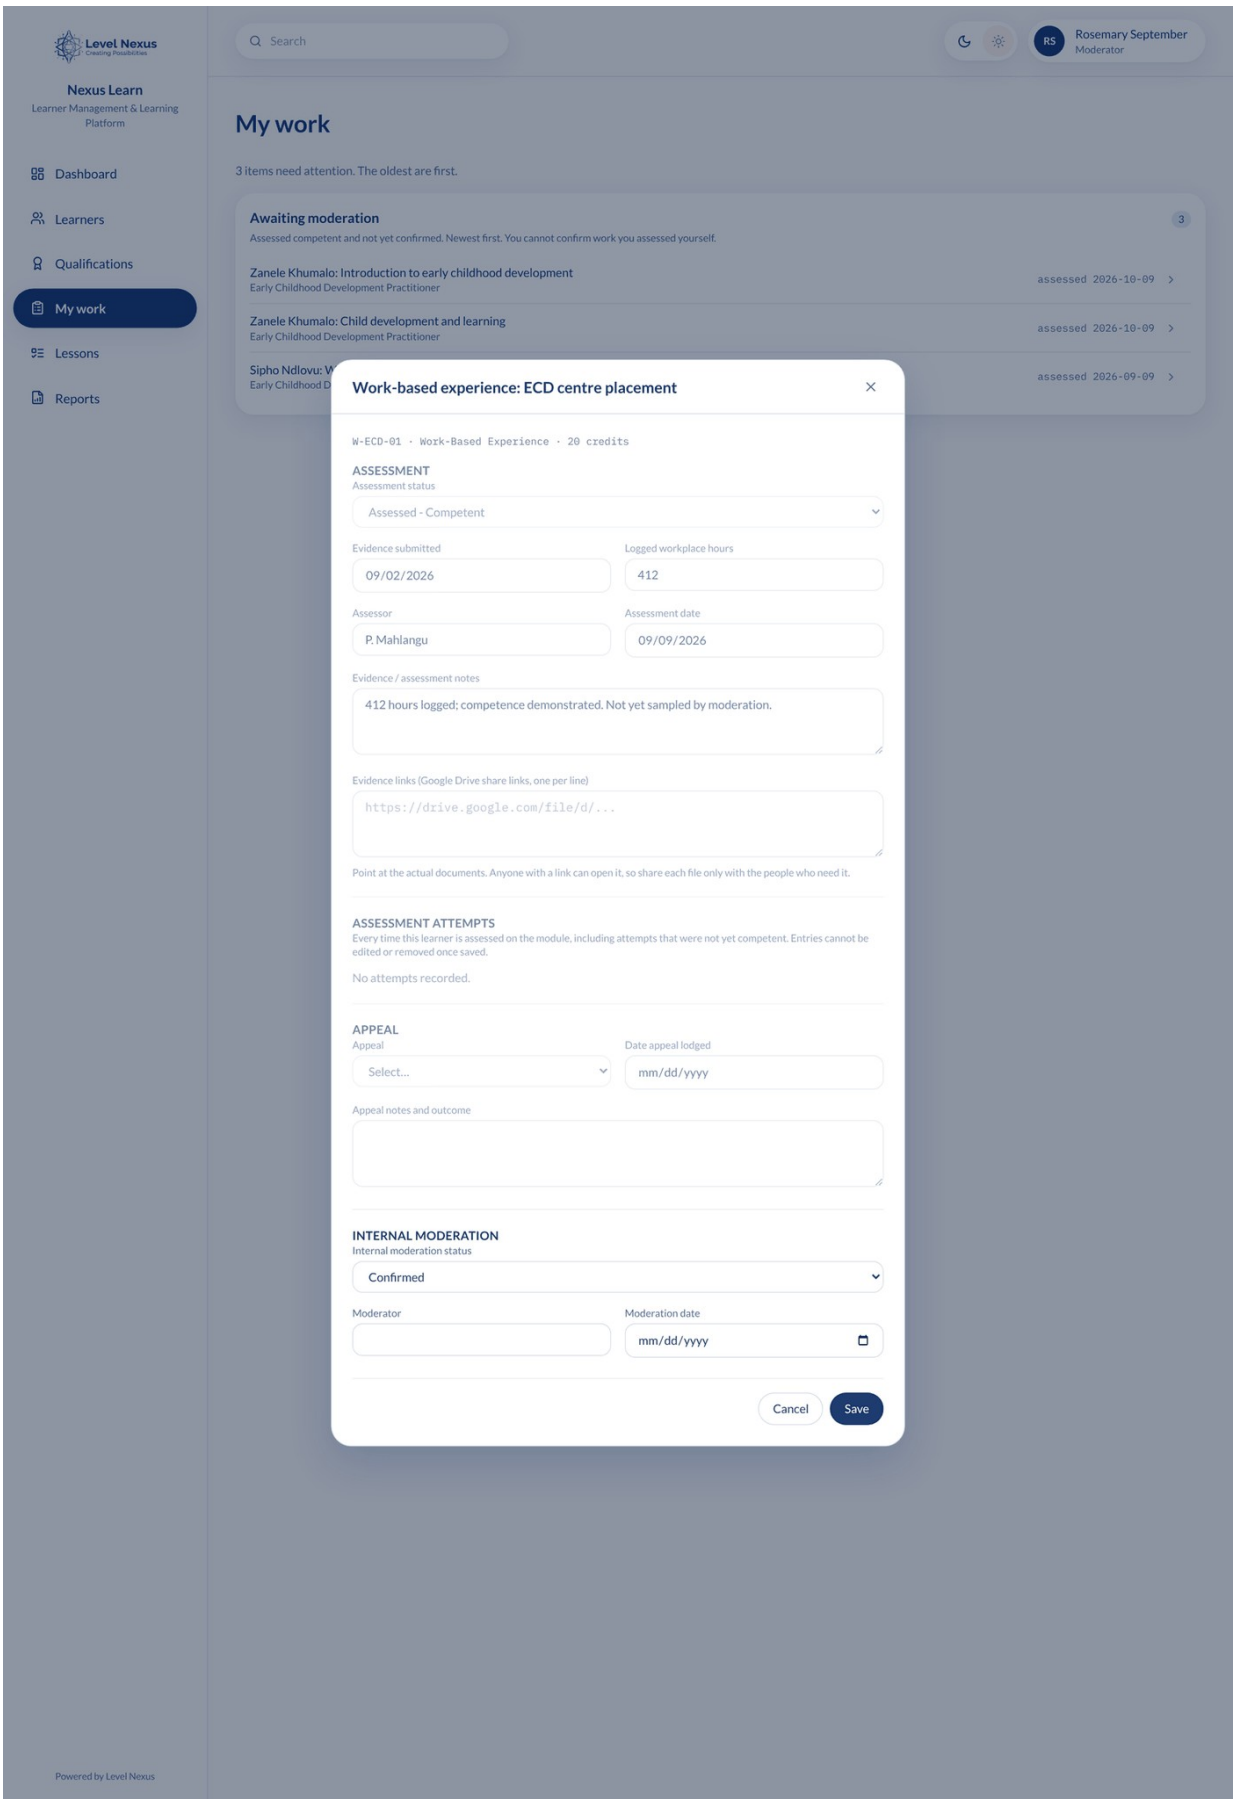

Moderators and Admins use the **Internal moderation** part of the same form. Open the module from **Awaiting moderation**.

The module form as a moderator sees it: Assessment is greyed out, Internal moderation is open

1. Check the assessor's evidence and attempts.

2. Set **Internal moderation status** to **Confirmed**, or **Not Confirmed - Review Required** if the result should be looked at again. **Not Yet Moderated** is the starting state.
3. **Moderator** and **Moderation date** fill in automatically (your name, today) when you record a decision; correct them if needed.
4. Press **Save**.

A module confirmed by the moderator

If you assessed the module yourself, a red message says *You assessed this module yourself, so you cannot confirm it. Another moderator has to.* and **Save** is disabled. A module marked **Not Confirmed - Review Required** shows in the Dashboard's Needs attention list (priority Medium) until it is reviewed again.

What changes afterwards

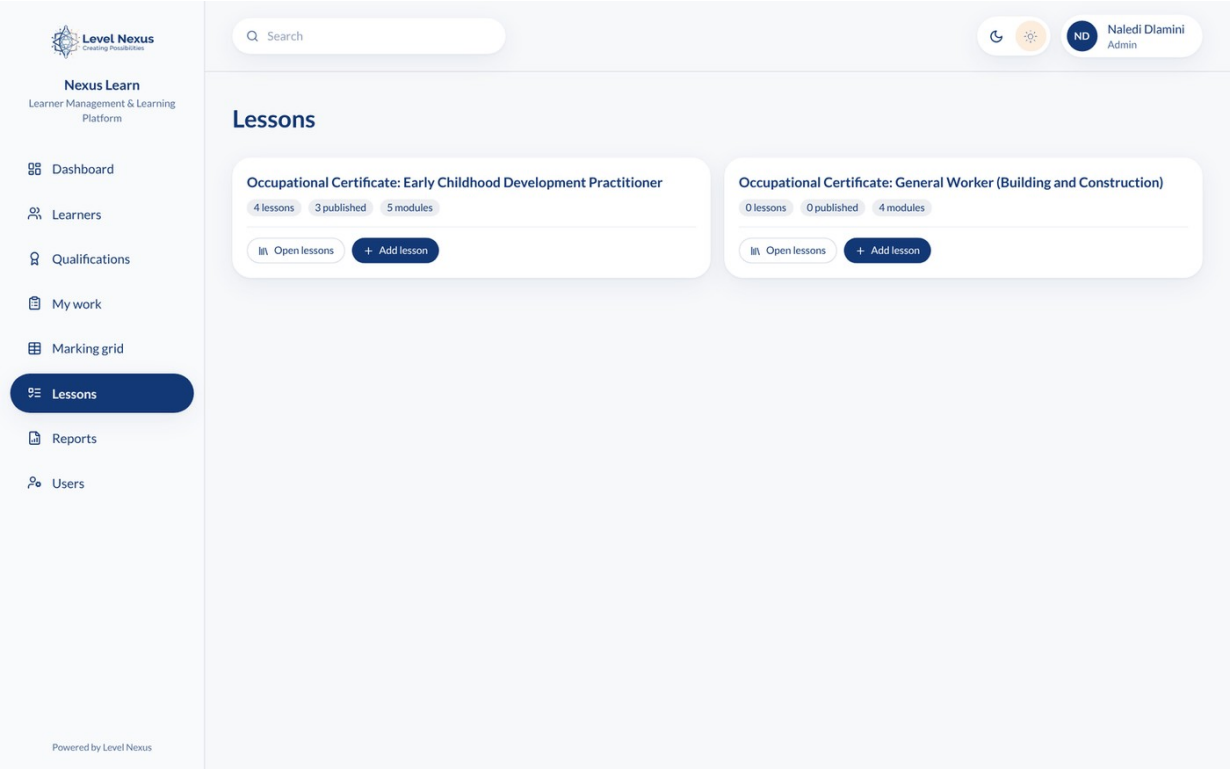

Once a module is **Assessed - Competent** and **Confirmed** it counts as complete in the K/P/W tiles, the readiness band and the EISA-Ready count. Under **Settings → Rules** an Admin can switch the moderation requirement off, or set a minimum number of logged hours for Work-based modules; both change what counts as complete everywhere at once and never alter the stored records.

7. Lessons and certificates of completion

Lessons are teaching material that learners study online. Finishing a lesson never marks a module competent; only an assessor does that (section 6). Admins and Facilitator/Assessors write lessons and issue certificates; Moderators can read lessons but not change them.

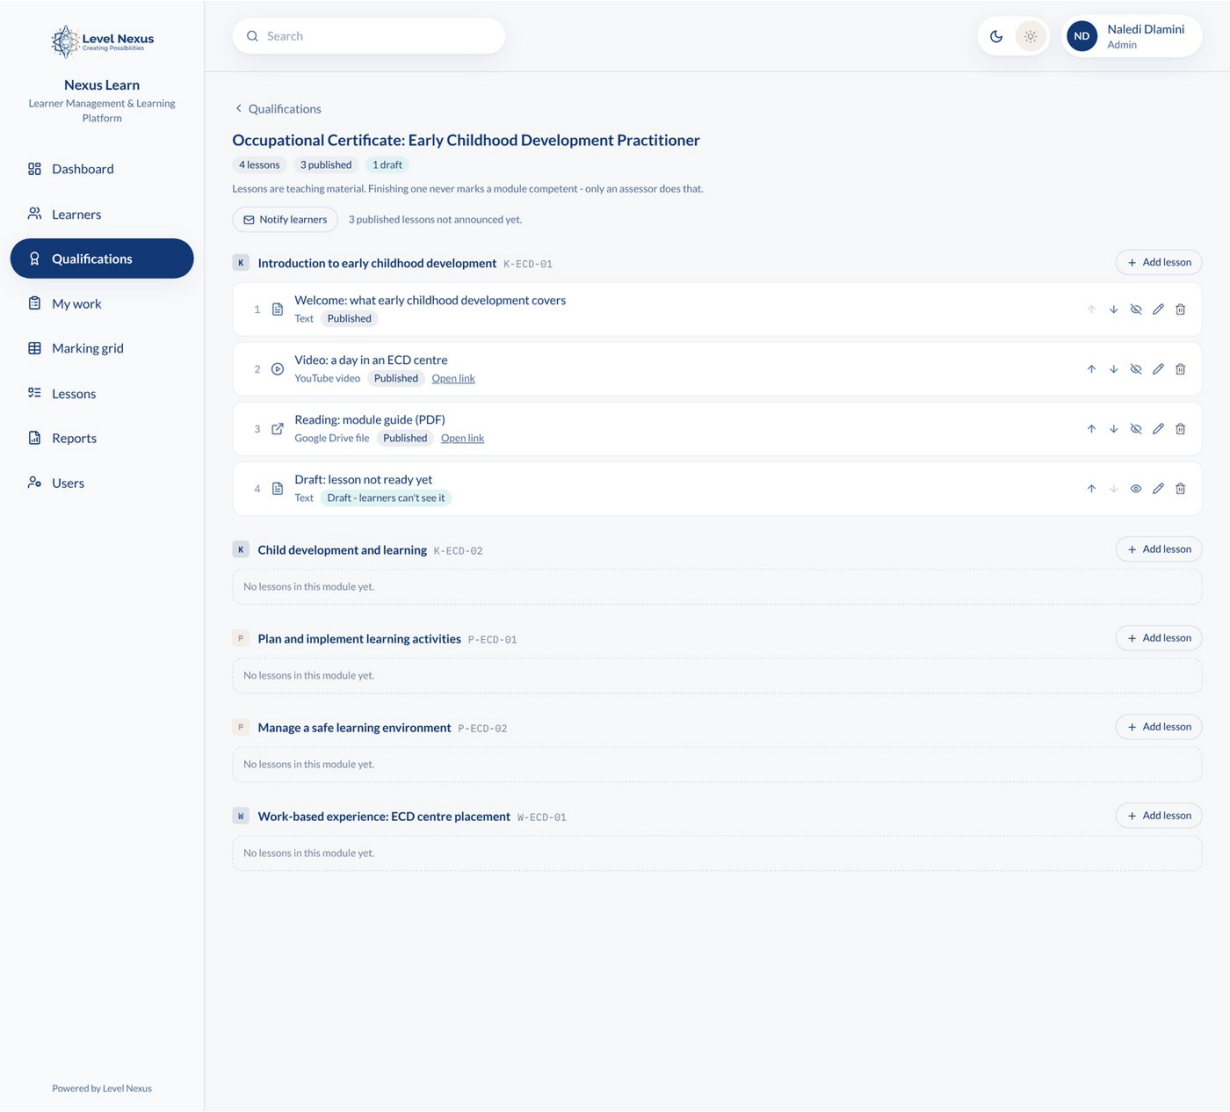

Where lessons are

There are two ways in. **Lessons** in the menu shows one card per qualification with badges for lessons, published lessons and modules, an **Open lessons** button and an **Add lesson** button. The **Lessons (n)** button on a qualification card opens the same place.

The Lessons hub

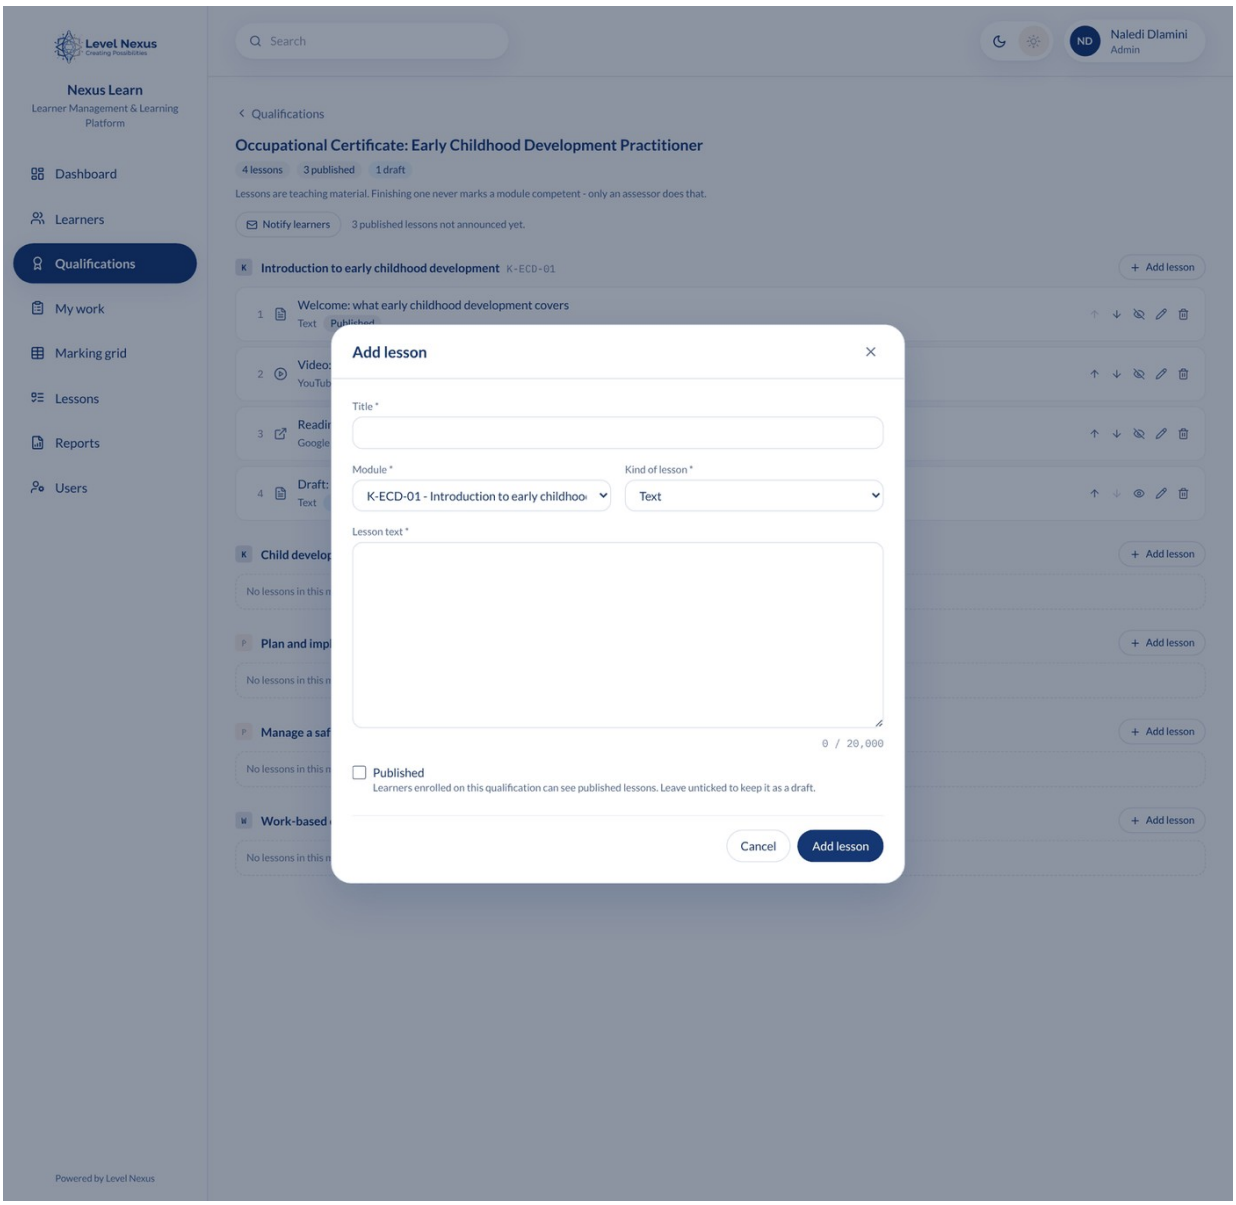

A qualification's lessons screen lists its modules in turn, with the lessons inside each in the order learners will see them. Each lesson row shows its number, its kind (Text, YouTube video or Google Drive file), a **Published** badge or a **Draft - learners can't see it** badge, and an **Open link** link for video and Drive lessons. The icons at the right move a lesson up or down, publish or unpublish it (eye), edit it (pencil) or delete it (bin, after a confirmation).

One qualification's lessons, by module, with a published draft and a link lesson

Adding a lesson

1. Press **Add lesson** beside the module, or on the card in the Lessons hub.
2. Type a **Title** (up to 120 characters) and check the **Module**.
3. Choose the **Kind of lesson**:
   - **Text**: type or paste the **Lesson text** (up to 20,000 characters, shown to learners as plain text).
   - **YouTube video**: paste the link. Only YouTube addresses are accepted. Use an *unlisted* video: anyone with the link can watch it.
   - **Google Drive file**: paste a Drive or Google Docs share link, with sharing set so anyone with the link can view. Only Google addresses are accepted.
   - **Bunny Stream video** appears only after an Admin turns it on under Settings → Lessons.
4. Tick **Published** when learners should see it. Leave it unticked to keep a draft.
5. Press **Add lesson**. The link is checked as you type, with a green tick when it is recognised and a red message when it is not.

The Add lesson form

Telling learners about new lessons

On a qualification's lessons screen, **Notify learners** is enabled when published lessons have not been announced yet (*N published lessons not announced yet*). Pressing it asks you to confirm how many learners will be emailed about how many lessons, then marks those lessons as announced so nobody is told twice. Learners who are Withdrawn or Certified, or who have no email address, are not emailed.

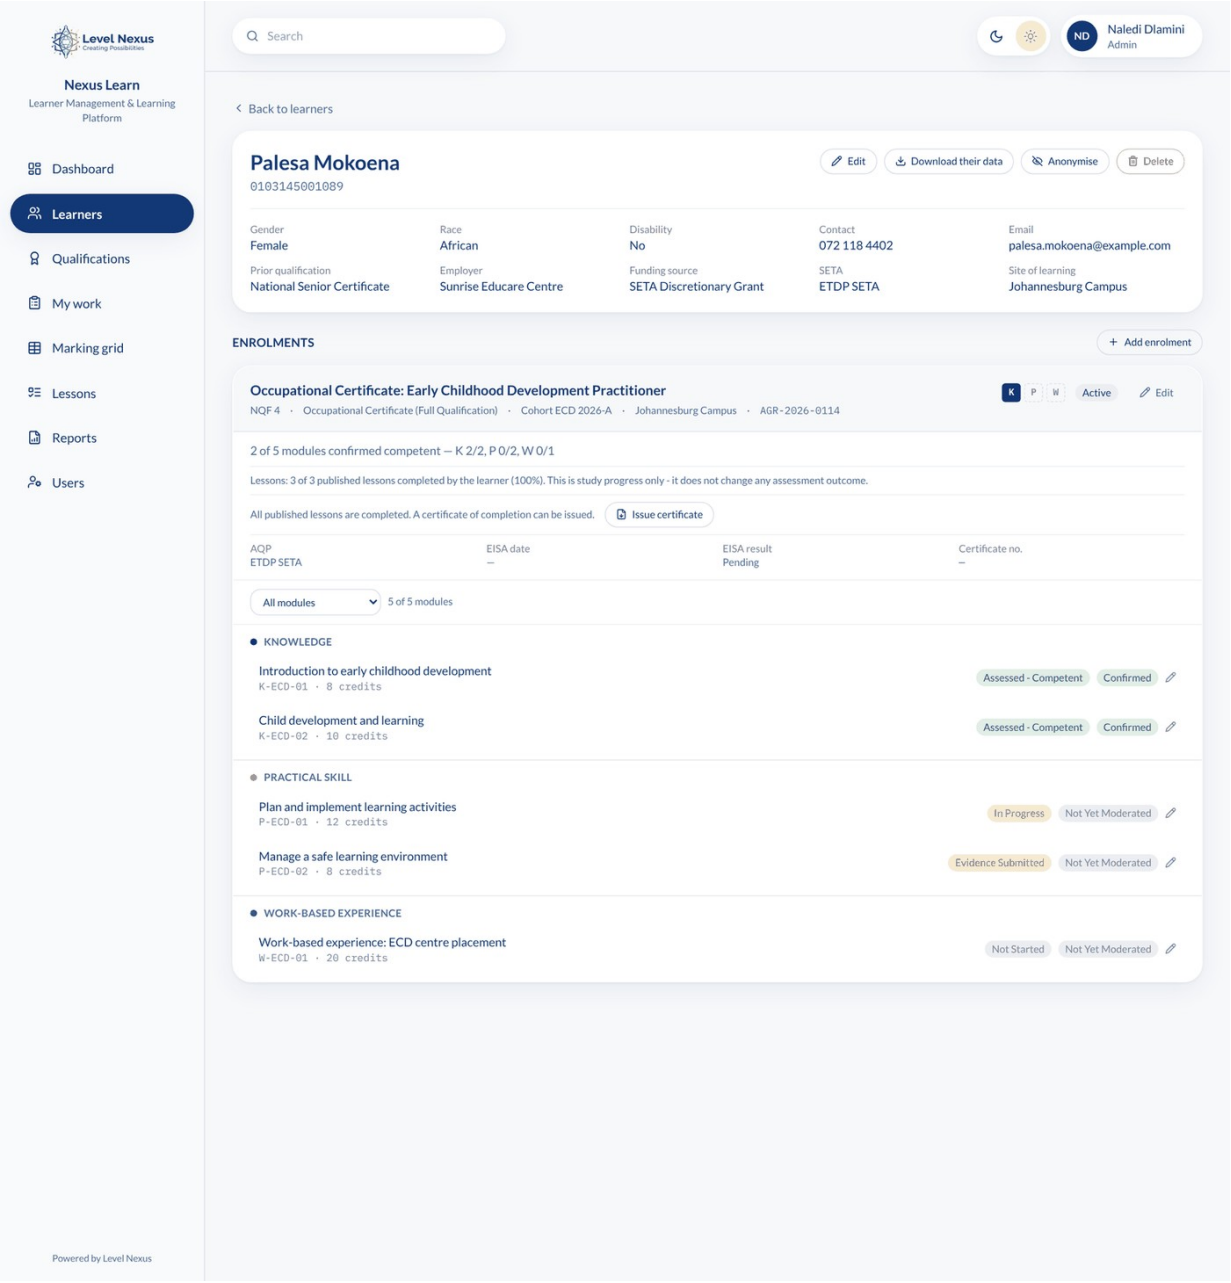

> **The system queues these emails; it does not send them.** They are only delivered once your administrator has set up the email sender described in the deployment guide. Until then, **Notify learners** records the announcement but nobody receives anything. Tell learners some other way.

Certificates of completion

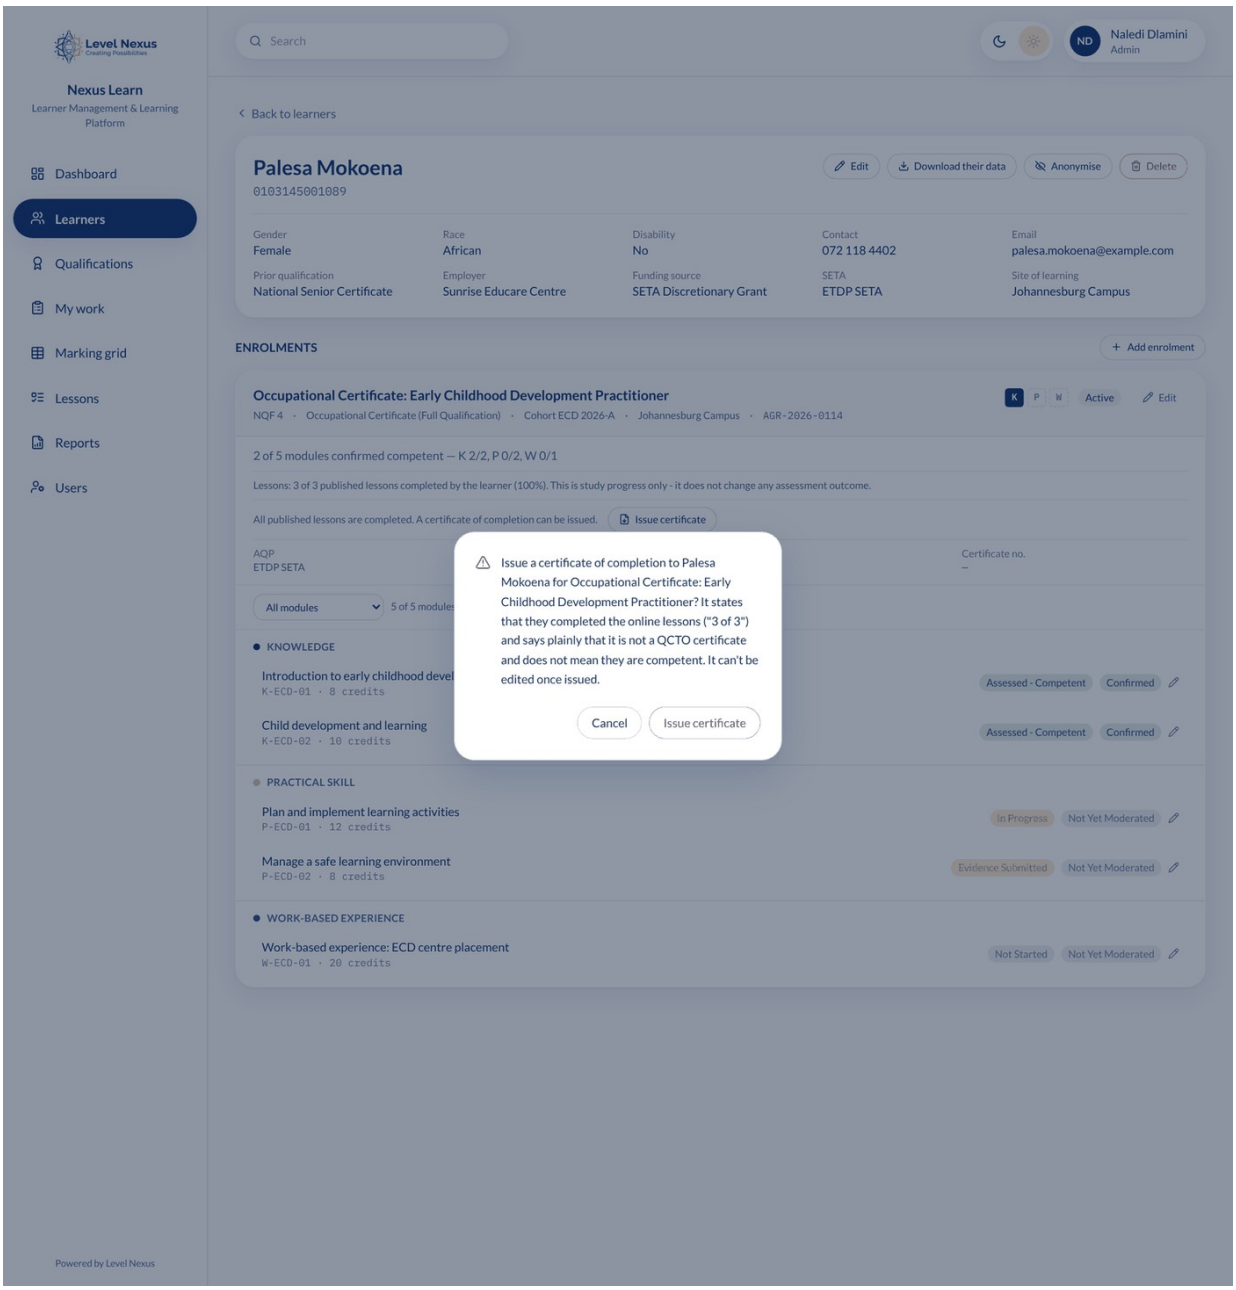

A certificate of completion records that a learner finished the published online lessons of a qualification. It is **not** a QCTO certificate and does not say the learner is competent; the certificate says so in as many words. Only staff issue it, so a learner cannot award themselves one by ticking boxes.

1. Open the learner's profile and look at the enrolment card. Under the readiness band it reads either *Certificate of completion: not yet — N of M lessons completed* or, once every published lesson is ticked by the learner, *All published lessons are completed. A certificate of completion can be issued.*

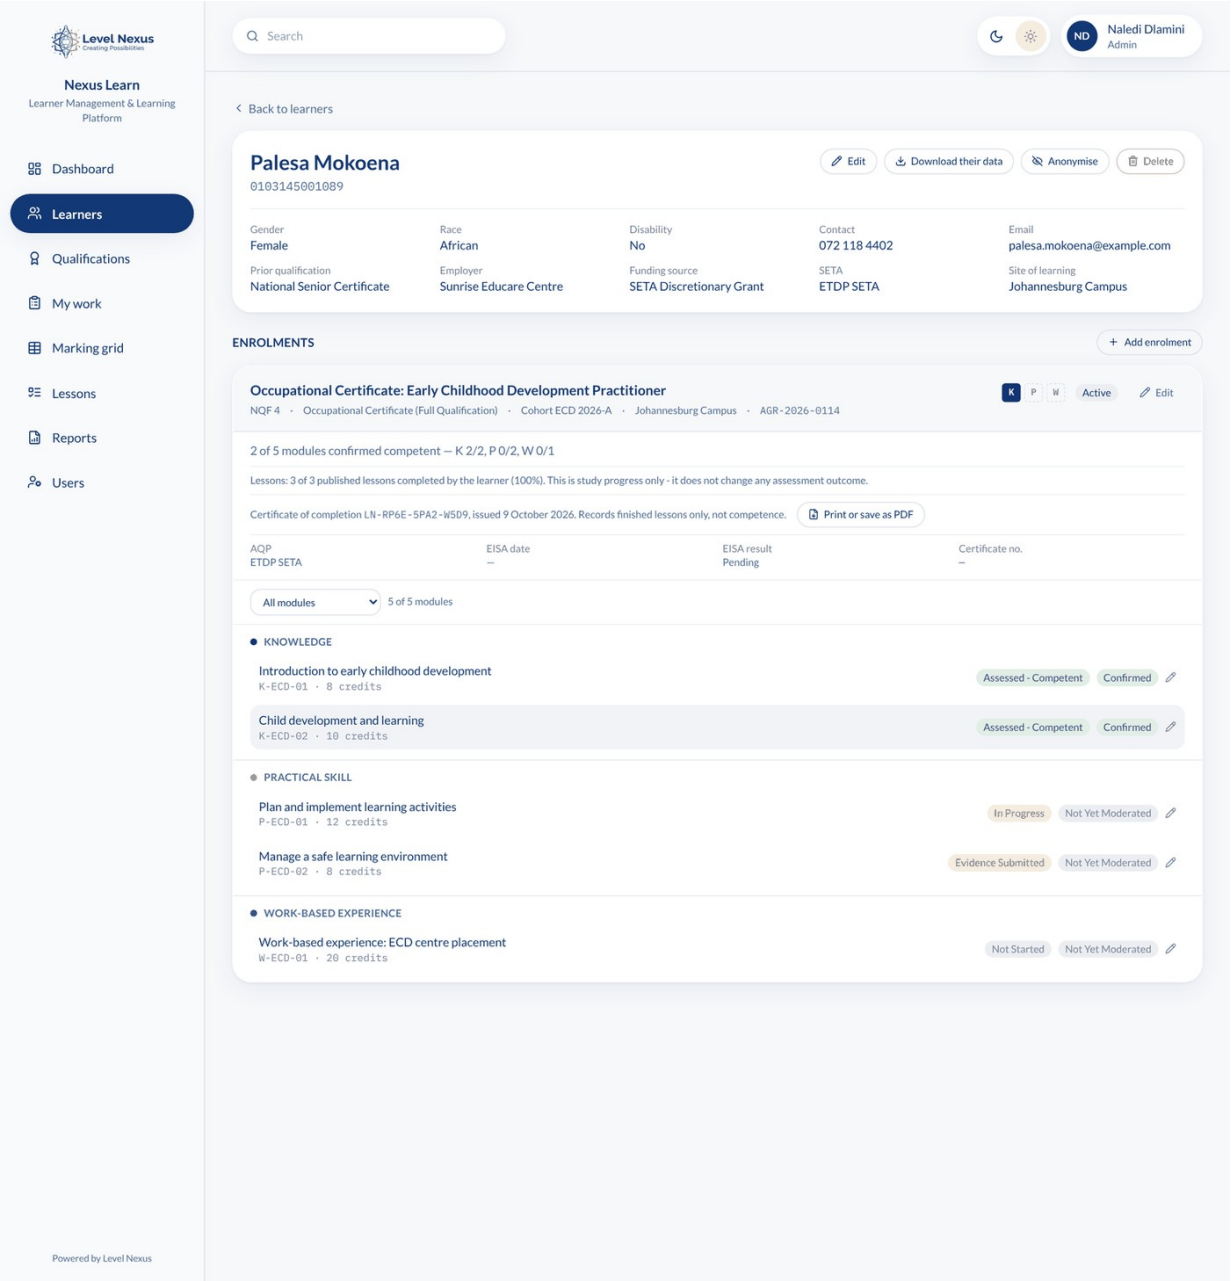

2. Press **Issue certificate**.
3. Read the confirmation. It states how many lessons were completed (for example “3 of 3”), repeats that this is not a QCTO certificate, and warns that the certificate **cannot be edited once issued**. Press **Issue certificate** again to confirm.
4. The card now shows the certificate number (of the form `LN-XXXX-XXXX-XXXX`), the date issued, and **Print or save as PDF**.

An eligible enrolment with the Issue certificate button

The confirmation before issuing

The issued certificate on the enrolment card

Print or save as PDF opens the certificate in a print window; choose *Save as PDF* as the printer to keep a copy. The learner sees the same certificate on their own Dashboard (section 11).

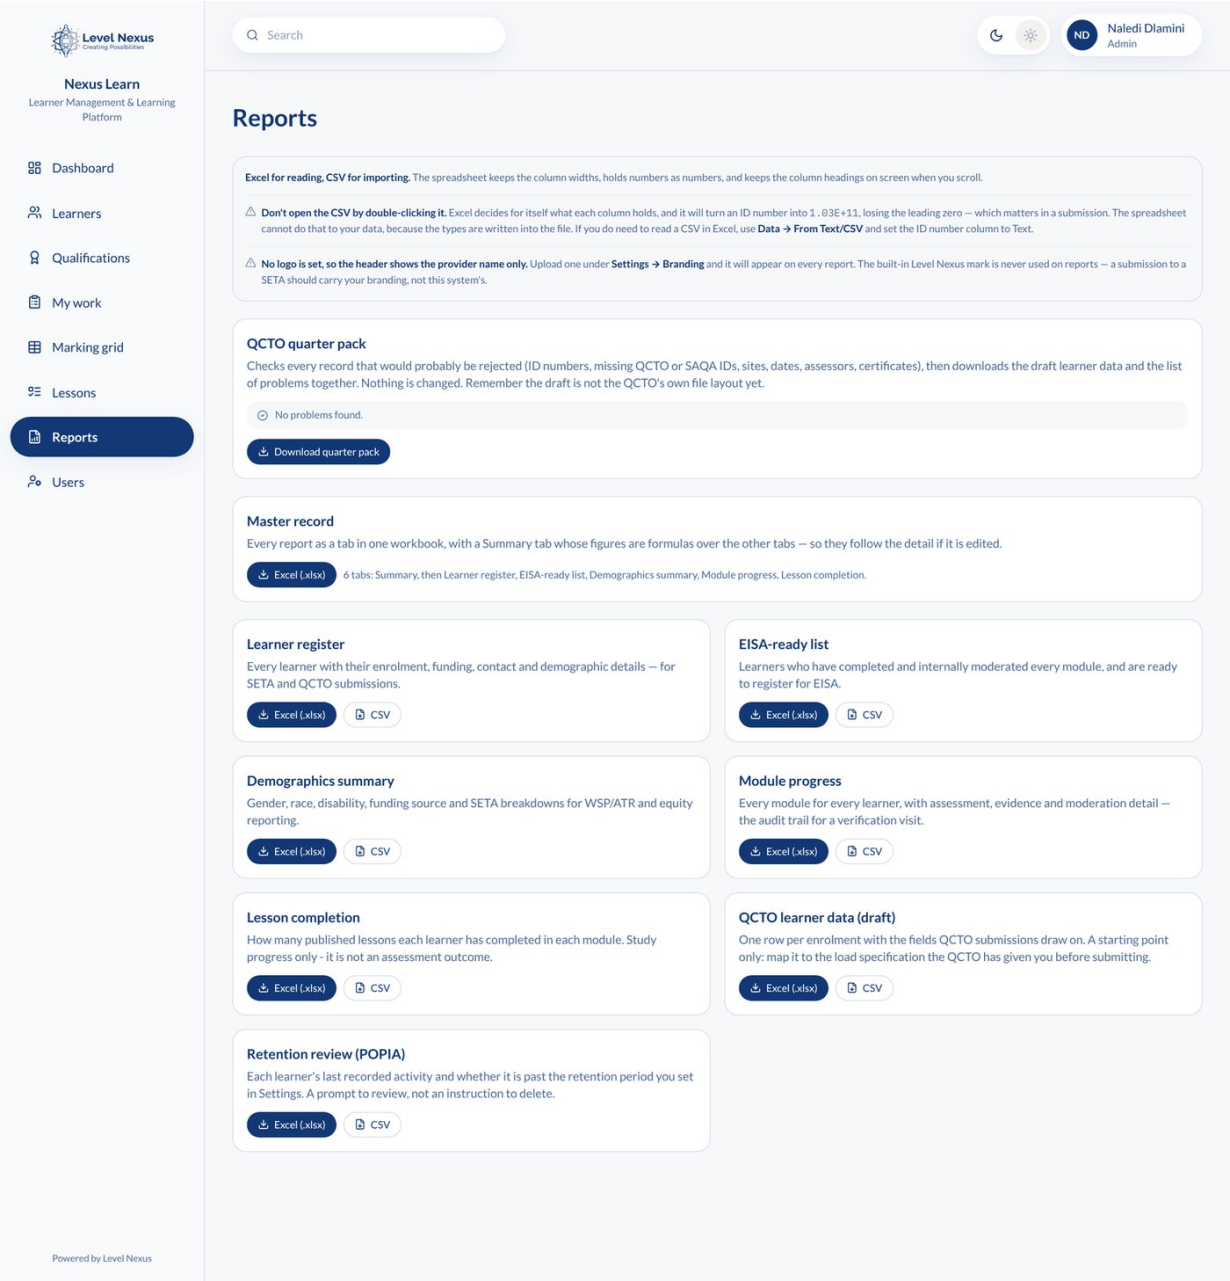

The printable certificate

Good to know: a certificate needs at least one published lesson and every published lesson ticked, and each enrolment can have only one. The lesson count printed on it is frozen on the day it is issued. There is no public page for checking a certificate number, so a person verifying one needs a staff login. If the learner is later anonymised (section 4), the certificate keeps their name and needs separate handling.

8. Reports and exports

The **Reports** screen produces the files you send to a SETA, the QCTO or a funder. Admins, Facilitator/Assessors and Moderators can open it. Every report is built from the live records, so it always agrees with the Dashboard. Each report downloads to your device.

The Reports screen

Excel or CSV?

Most reports offer both buttons.

- **Excel (.xlsx)** is for reading. It keeps the column widths, holds numbers as numbers and keeps the headings on screen when you scroll. Use this unless another system needs a CSV.
- **CSV** is for importing into other systems. **Do not open a CSV by double-clicking it.** Excel guesses each column's type and will turn a 13-digit ID number into something like `1.03E+11`, dropping the leading zero, which matters in a submission. If you must read a CSV in Excel, use **Data → From Text/CSV** and set the ID number column to Text.

The notice at the top of the screen repeats this. If it also says *No logo is set* or *Your logo will be left off the header*, upload (or re-save) your logo under Settings → Branding so that it appears on every report. The built-in product logo is never put on a report.

The reports

Report	What it holds	Formats
QCTO quarter pack	Runs the data-quality check, then downloads the draft learner data and the list of problems together (section below).	Two CSV files
Master record	Every report as a tab in one workbook, plus a *Summary* tab whose figures are formulas over the other tabs, so they follow the detail if it is edited. Six tabs: Summary, Learner register, EISA-ready list, Demographics summary, Module progress, Lesson completion.	Excel only
Learner register	Every learner with their enrolment, funding, contact and demographic details, for SETA and QCTO submissions.	Excel, CSV
EISA-ready list	Learners who have completed and internally moderated every module and are ready to register for EISA.	Excel, CSV
Demographics summary	Gender, race, disability, funding source and SETA breakdowns for WSP/ATR and equity reporting.	Excel, CSV
Module progress	Every module for every learner, with assessment, evidence and moderation detail: the audit trail for a verification visit.	Excel, CSV
Lesson completion	How many published lessons each learner has completed in each module. Study progress only.	Excel, CSV
QCTO learner data (draft)	One row per enrolment with the fields QCTO submissions draw on. A starting point only: it is **not** the QCTO's own file layout, so map it to the load specification the QCTO gives you before submitting.	Excel, CSV
Retention review (POPIA)	Each learner's last recorded activity and whether it is past the retention period set in Settings. A prompt for a person to review; nothing is deleted.	Excel, CSV

The **Dashboard's Export** button downloads the Master record. How the files are written (comma or semicolon, byte-order mark, date in the filename, the header block above the table) is set under Settings → Exports (section 10). Dates inside exports are always written year-month-day, whatever the on-screen date format.

Running the quarter pack

1. Open **Reports**. The pale box under *QCTO quarter pack* already says either *No problems found* or *N problems found. Fix them before you submit.*
2. If there are problems, press **Show problems** to list them as Learner, Qualification and Problem (the first 200 are shown; the download has them all).
3. Fix each one at its source on the learner's profile or the qualification, then come back. Nothing is changed by the check itself.
4. Press **Download quarter pack**. Two files are saved a moment apart: `qcto-learner-data-draft.csv` and `qcto-submission-problems.csv`. If your browser asks whether to allow multiple downloads, allow it.

The check looks for the problems the QCTO is likely to reject:

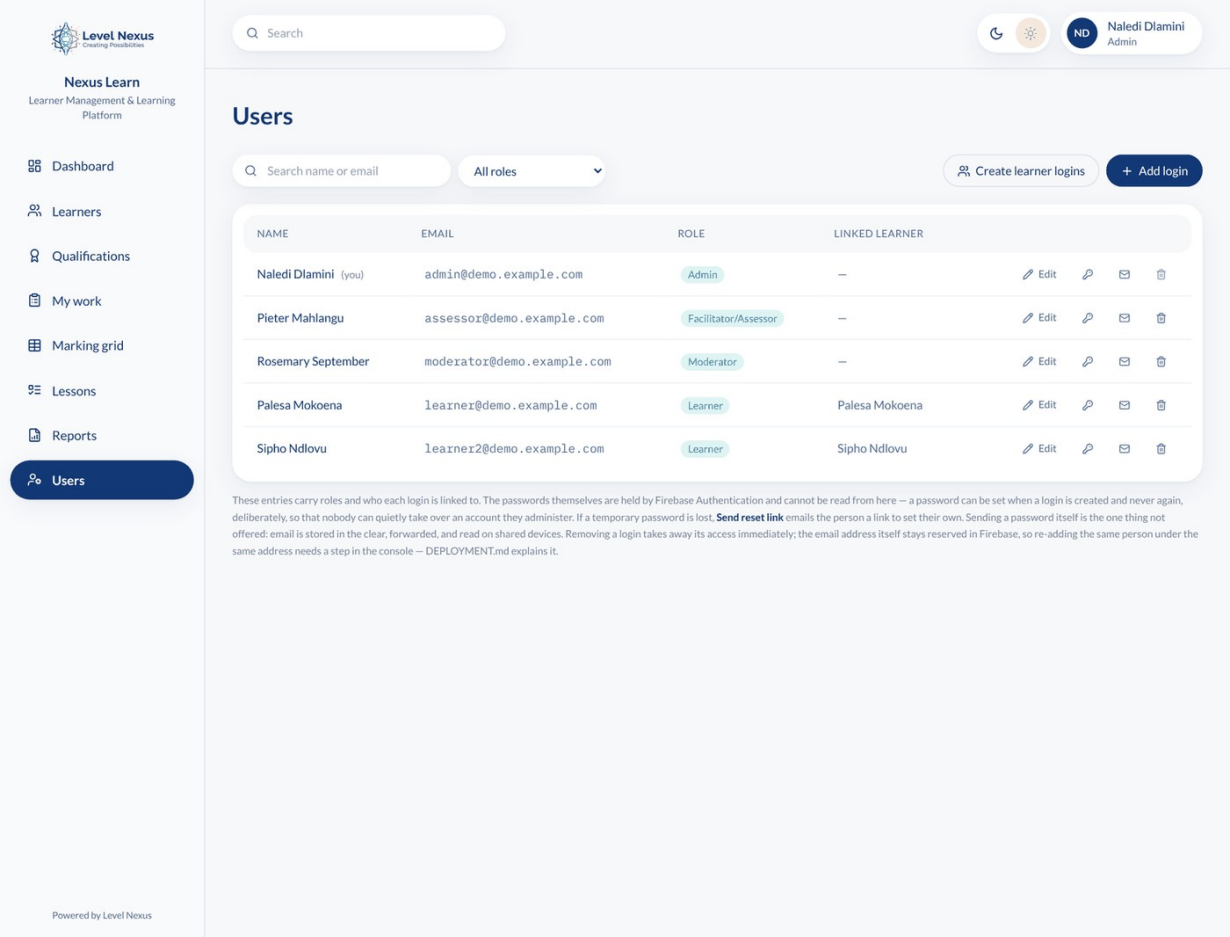

Problem reported	Where to fix it
ID number missing, not exactly 13 digits, containing an impossible birth date, with an invalid citizenship digit, or failing the check-digit test (checked for learners who have at least one enrolment)	The learner's record (Edit)
Qualification has no QCTO ID, or no SAQA ID	Qualifications → Edit

Problem reported	Where to fix it
No site of learning (neither on the enrolment nor on the learner)	The enrolment or learner record
No enrolment date	The enrolment
No assessor recorded on any module (for enrolments that are assessed or finished)	A module's Assessor field
Certified, but no certificate number or no certification date	The enrolment (Edit)
The qualification record for an enrolment is missing	Contact your administrator

Reports contain personal information. A downloaded file leaves the system's access controls. Keep it where only the people who need it can open it, send it only to the organisation it is for, and delete copies you no longer need.

9. Users and logins (Admin only)

The **Users** screen is where an Admin gives people access. A login has an email address, a role and, for a learner, the learner record it may see. The role decides what the person can do (see the table in the introduction); the database itself enforces it, so hiding a button is never the only protection.

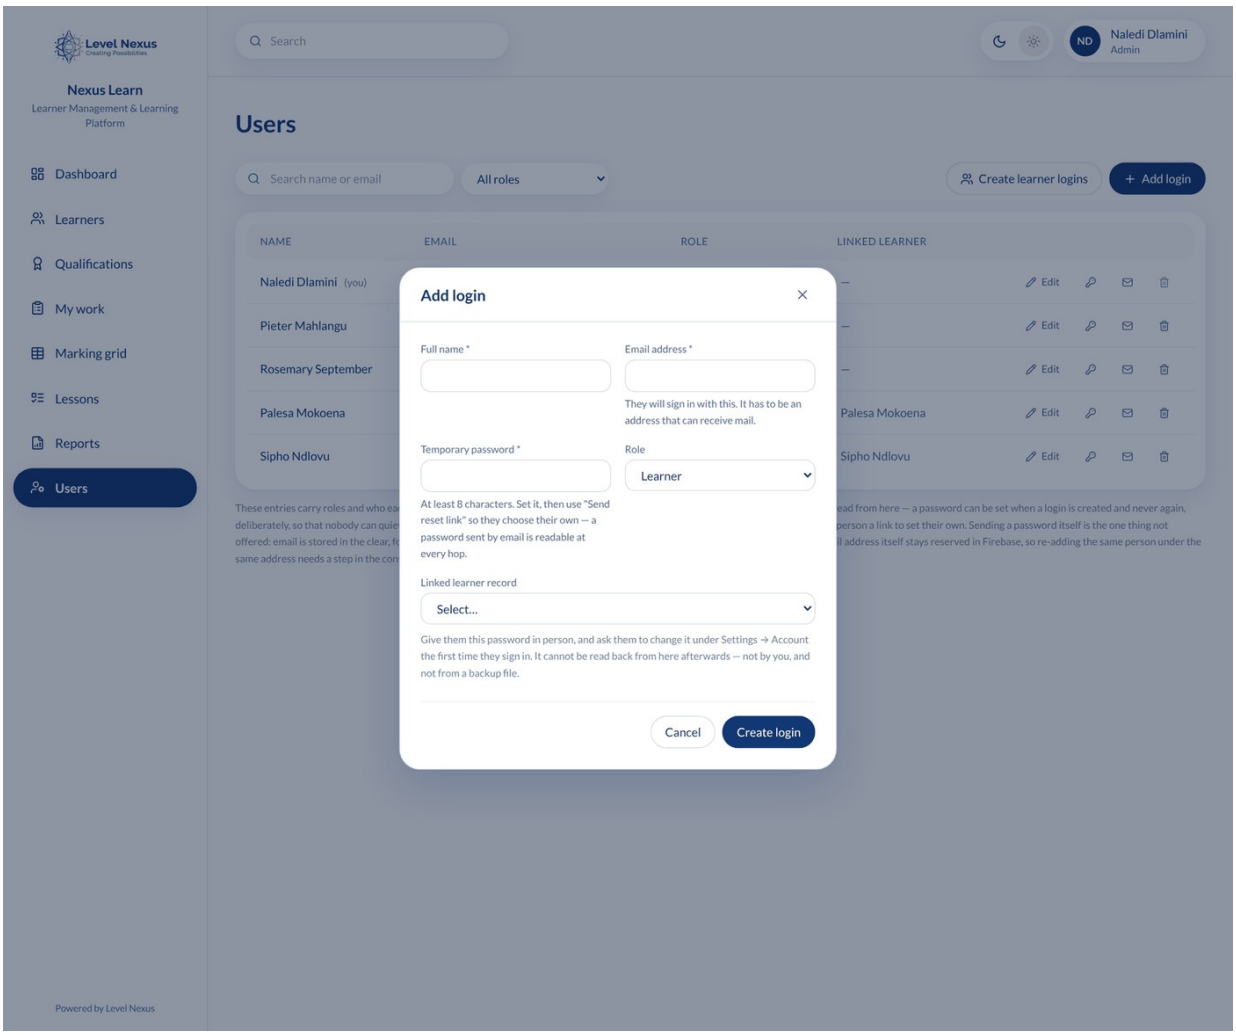

The Users screen

The list shows **Name**, **Email**, **Role** and **Linked learner**, with *(you)* beside your own row. Search by name, email or linked learner, and filter by role. The icons at the right of each row are, in order: **Edit**, **Send reset link** (key), **Email details** (envelope) and **Remove** (bin; disabled on your own row).

Adding one login

1. Press **Add login**.
2. Enter **Full name** and **Email address** (it has to be an address that can receive mail), and a **Temporary password**.
3. Choose the **Role**: Admin, Facilitator/Assessor, Moderator or Learner. For a Learner, also choose the **Linked learner record**; a learner login is required to be linked, and it sees only that record.
4. Press **Create login**.
5. Give the person the temporary password in person, then press **Send reset link** on their row so they choose their own. Never send a password by email.

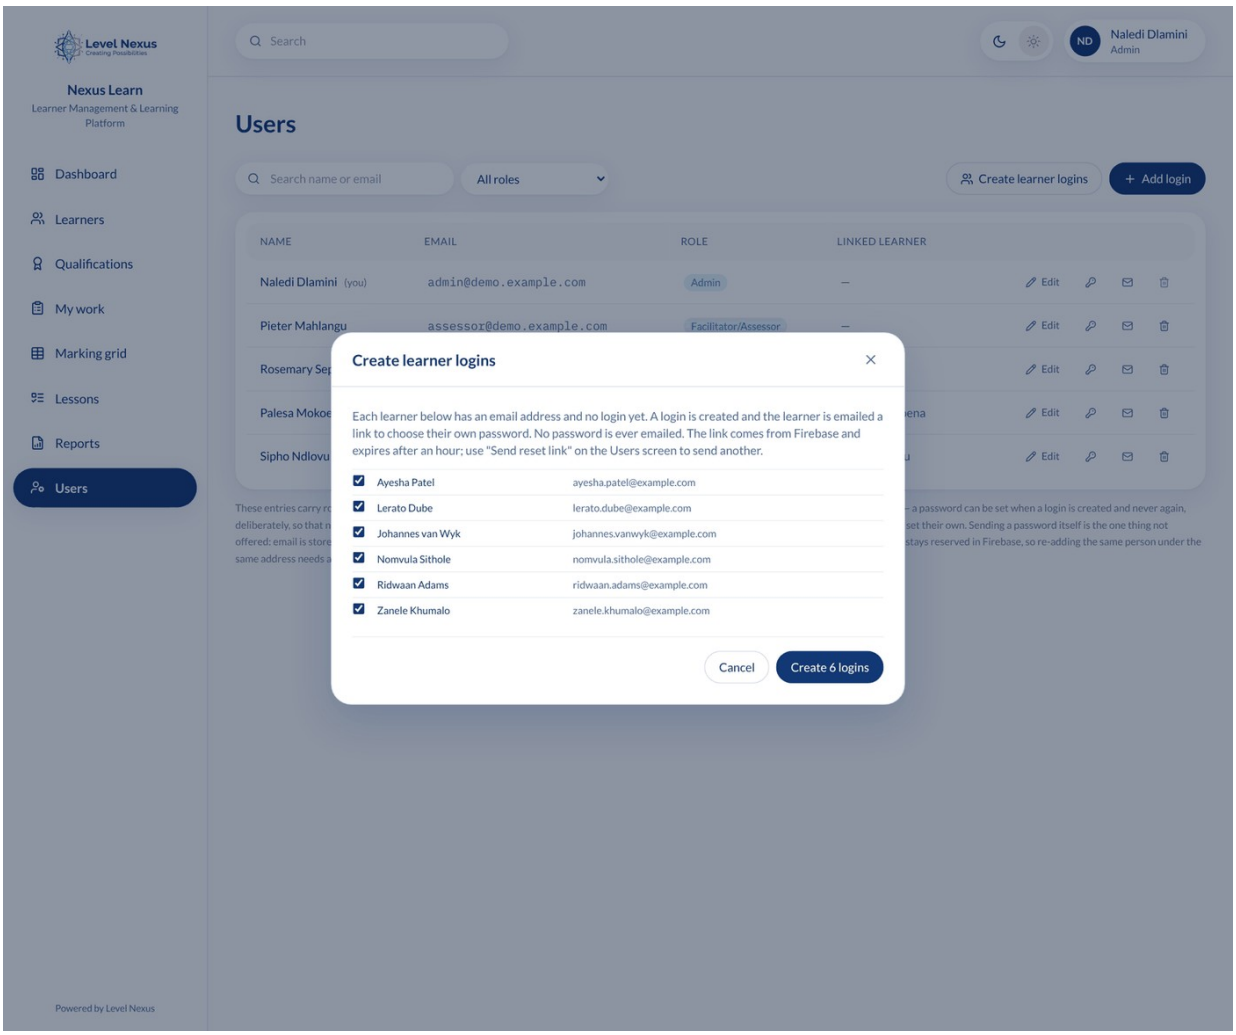

The Add login form

The temporary password must be at least the minimum length set under Settings → Security. Nobody, including you, can read a password back afterwards, and an Admin cannot set another person's password after the login exists. That is deliberate: it stops an administrator quietly taking over someone else's account.

Creating learners' logins in one go

Once learners have an email address on their record, **Create learner logins** makes all their accounts together.

1. Press **Create learner logins**. The window lists every learner who has an email address and no login yet, all ticked.
2. Untick anyone who should wait. A *N learners cannot get a login yet* note lists the rest and why (no email address, an invalid address, or that address already has a login).
3. Press **Create N logins**. Each learner gets an account with a password nobody sees and is emailed Firebase's own link to choose a password. The window reports *N created* and names anyone it failed for; the rest still go ahead.

Create learner logins

Sending a reset link

Send reset link emails the person a link, sent by Firebase, to choose their own password. The page confirms *Password reset link sent to …* and says the link expires after an hour; press it again for a fresh link. This is also what to do when someone forgets their password.

Emailing sign-in details

Email details queues a welcome message that tells the person how to sign in (it never contains a password). The page says *queued*, not *sent*: like the lesson announcements in section 7, it is delivered only once an email sender is set up. If the person needs access today, send the reset link as well.

Editing and removing a login

- **Edit** changes the name, role and linked learner. The email address is shown but cannot be changed, because it belongs to the sign-in account. To correct a mistyped address, remove the login and add it again under the right address; the old address stays reserved in Firebase, so freeing it takes one console step that is described in the deployment guide and repeated in SOP-05.
- **Remove** takes away access immediately, after a confirmation. The person can still type their password, but is told *This sign-in has no access record* and sees nothing. You cannot remove your own login.

Removing a login does not remove the person's sign-in account, and the email address stays reserved. If a learner has left, also consider anonymising their record (section 4), which deactivates their login profile.

10. Settings

Settings is where an Admin makes the installation yours: provider details, logo and colours, the dropdown lists, the readiness rules, export formats, backups and bulk import. Open it from the profile menu at the top right. Ten tabs run across the top, in this order: **Account**, **Organisation**, **Branding**, **Lists**, **Rules**, **Lessons**, **Exports**, **Data**, **Security** and **Activity**.

Every signed-in person sees **Account**, because it is where you change your own password. The other nine tabs need the Admin role.

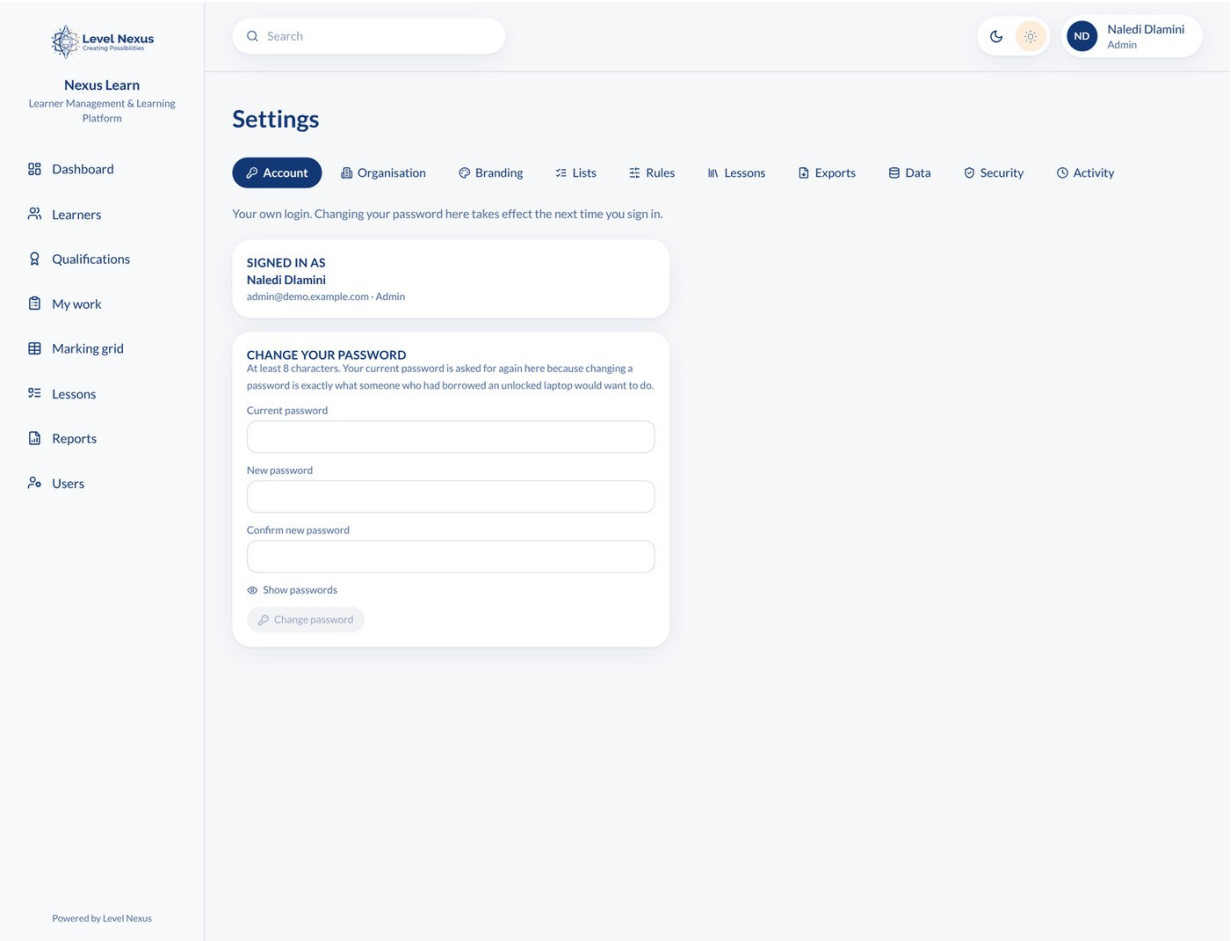

How saving works

Two patterns, and it helps to know which tab uses which:

- **Organisation, Lists, Rules, Lessons, Exports and Security** share one draft. Change as many of them as you like, then press **Save settings** in the bar pinned to the bottom of the screen. **Discard changes** throws the draft away. The bar shows *Unsaved changes* until you save, then *Saved*.
- **Branding, Data and Account** save themselves with their own buttons. **Activity** is read-only.

Account (everyone)

The **Signed in as** panel shows who you are and your role. Under **Change your password**, type your current password, then the new one twice, and press **Change password**. Tick **Show passwords** if you want to see what you are typing.

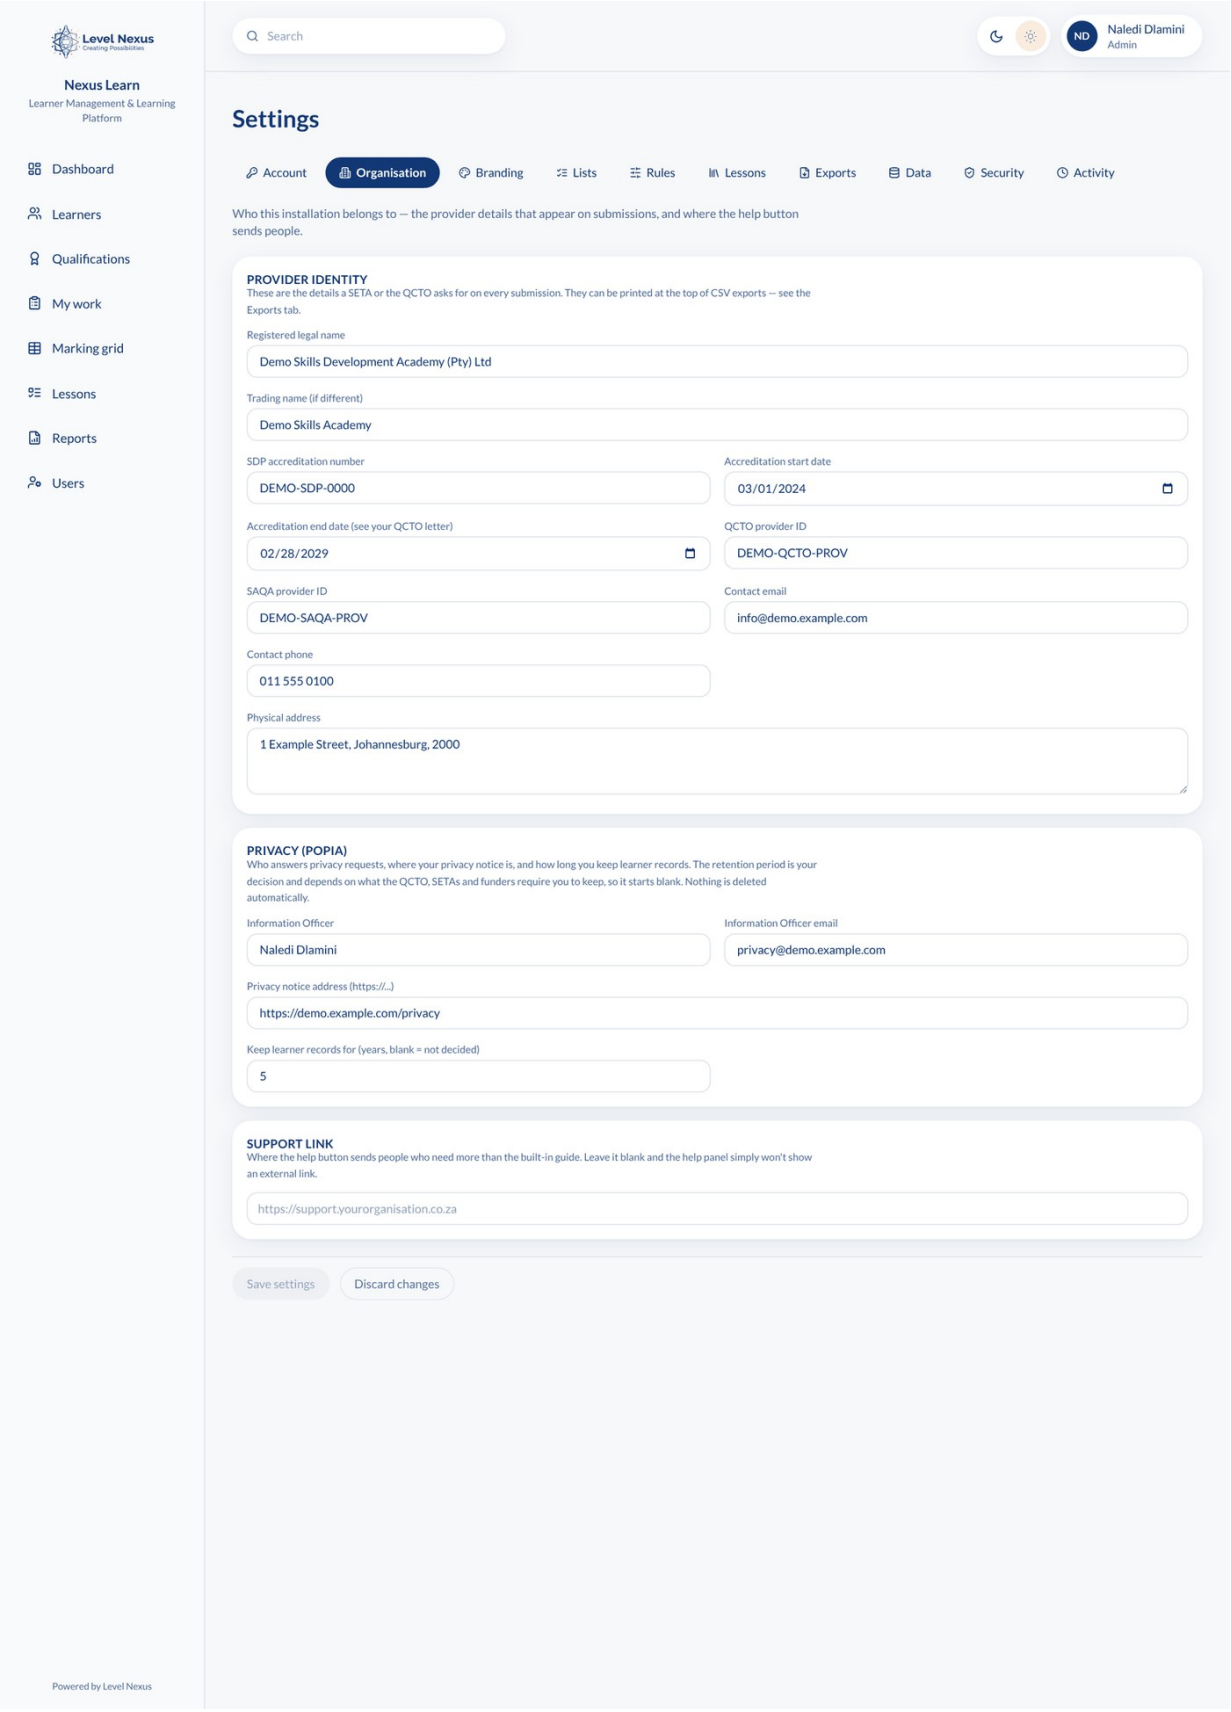

Settings, Account tab: signed in as, and Change your password

Three messages you may meet: *Your new password must be at least N characters.* (N is set in the Security tab), *The two new passwords don't match.*, and *That's not your current password.* The new password takes effect the next time you sign in.

Organisation

Who this installation belongs to. Fill these in once; they appear on submissions and exports.

Group	Fields
Provider identity	Registered legal name, Trading name (if different), SDP accreditation number, Accreditation start date, Accreditation end date (see your QCTO letter), QCTO provider ID, SAQA provider ID, Contact email, Contact phone, Physical address
Privacy (POPIA)	Information Officer, Information Officer email, Privacy notice address (a link starting https://), Keep learner records for (years; the Provider uses 5)
Support	Support link: where the **Help** button sends people. It must start with http:// or https://

Settings, Organisation tab

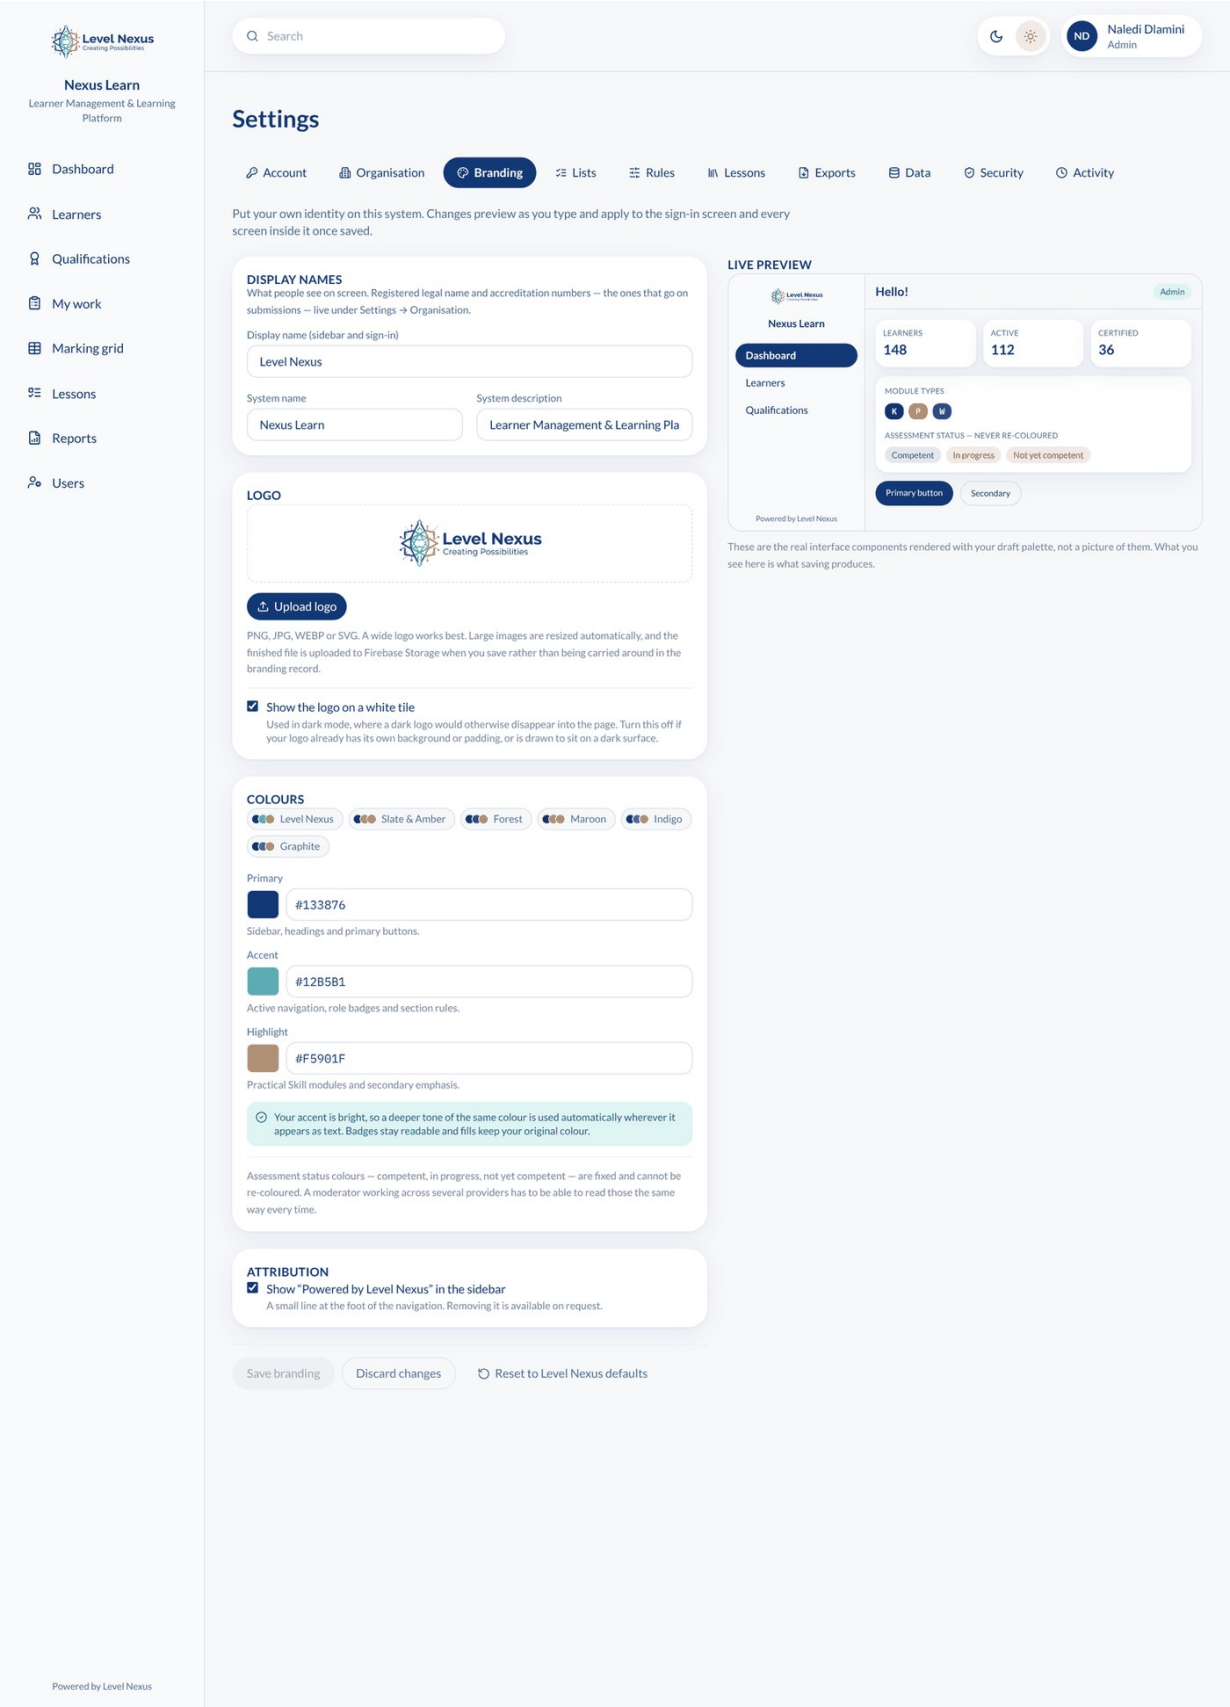

The Information Officer details and the privacy notice address are what a learner sees under **Your information** on their Dashboard (section 11), so fill them in before you give learners their logins.

Branding

Put your own identity on the system. Changes preview as you type, in a live preview panel, and apply to the sign-in screen and every screen after it once you save.

- **Display names:** *Display name* (shown in the sidebar and on the sign-in screen), *System name* and *System description*.
- **Logo:** PNG, JPEG, WEBP or SVG. Press **Upload logo** (it reads **Replace logo** once one is set). The file is uploaded when you save; if file storage is unavailable the logo is kept inline instead, so the screen still works. A smaller copy is made automatically for printed reports. In dark mode, **Show the logo on a white tile** keeps a dark logo readable.
- **Colours:** pick a preset, or type your own hex codes for **Primary**, **Accent** and **Highlight**. An accent that is too bright to read as text is darkened automatically. Status colours (competent, in progress, not yet competent) are never re-coloured, so a learner's status always means the same thing.
- **Show Powered by Level Nexus in the sidebar** is a toggle.

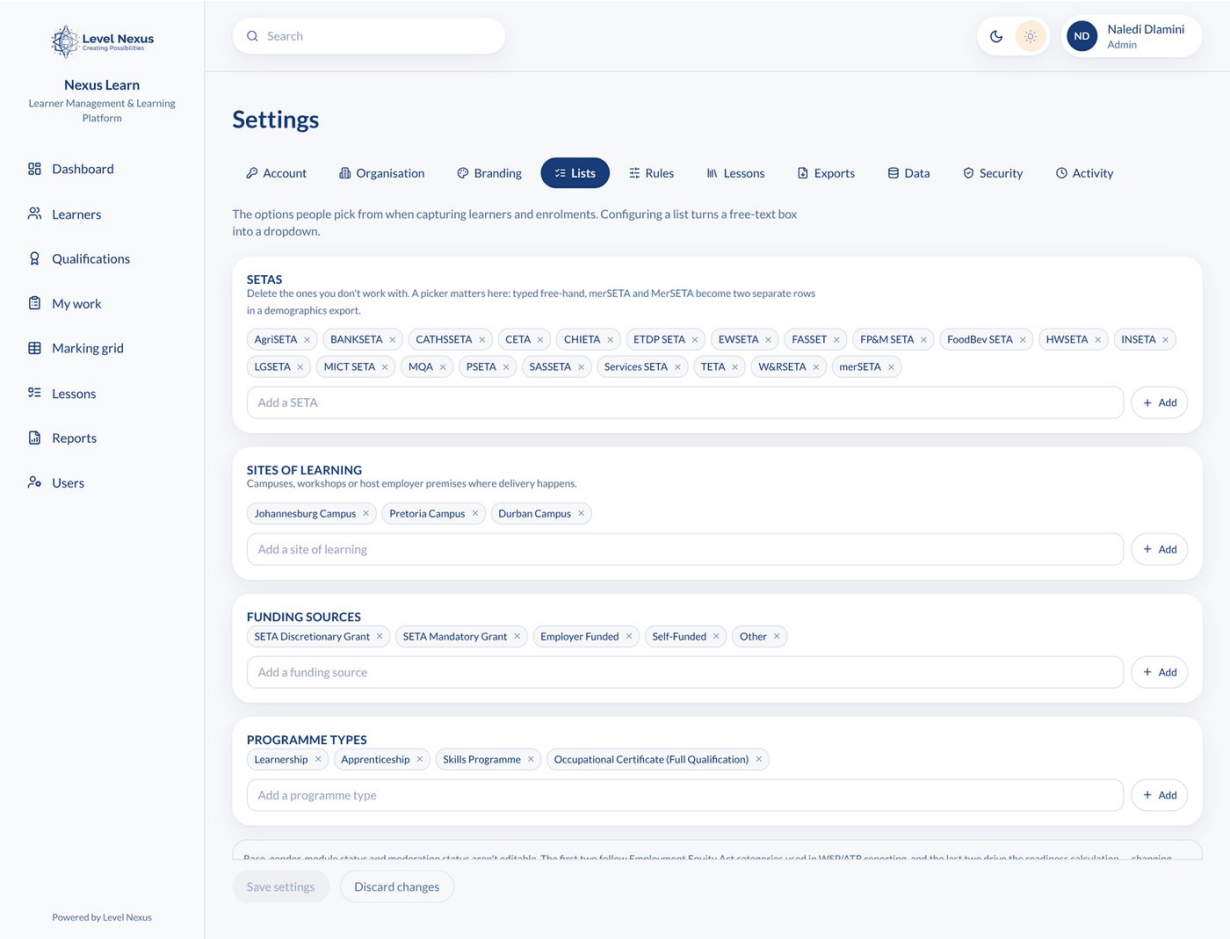

The buttons are **Save branding**, **Discard changes** and **Reset to Level Nexus defaults**.

Settings, Branding tab with live preview

Lists

The choices in the dropdowns on learner, enrolment and qualification forms. Four lists can be edited, each as removable chips with an **Add** box: **SETAs**, **Sites of learning**, **Funding sources** and **Programme types**.

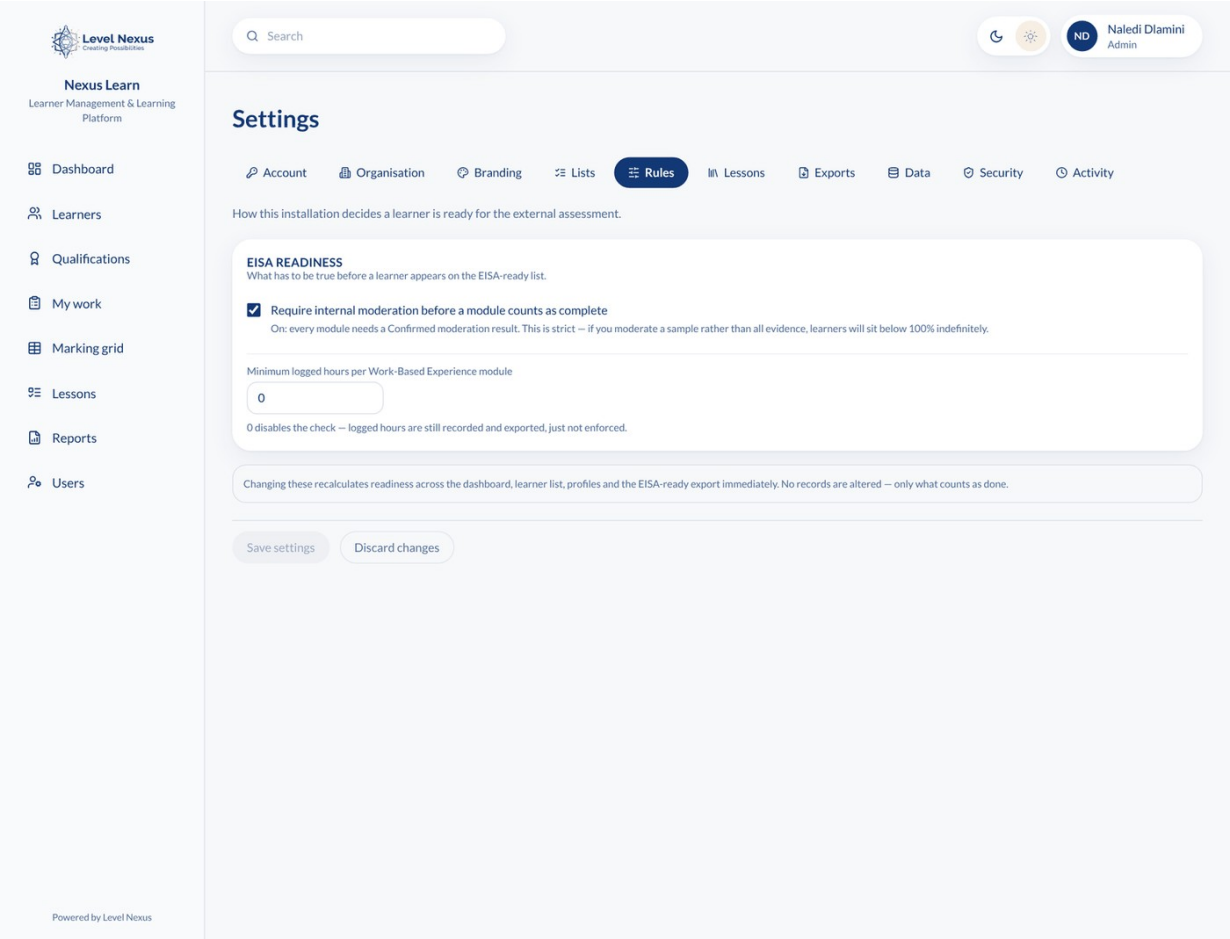

Settings, Lists tab

If you empty a list, that dropdown turns into a free-text box. Removing a chip does not change records that already use the value. Race, gender, module status and moderation status are fixed and cannot be edited here.

Rules

Two switches that decide when a module counts as complete (see “Ready for EISA” at the start of this manual).

Setting	What it does
Require internal moderation before a module counts as complete	On by default. A module needs a moderator’s *Confirmed* as well as an *Assessed - Competent* result.
Minimum logged hours per Work-Based Experience module	Default 0 (no minimum). Set a number and a W module is not complete until that many hours are logged.

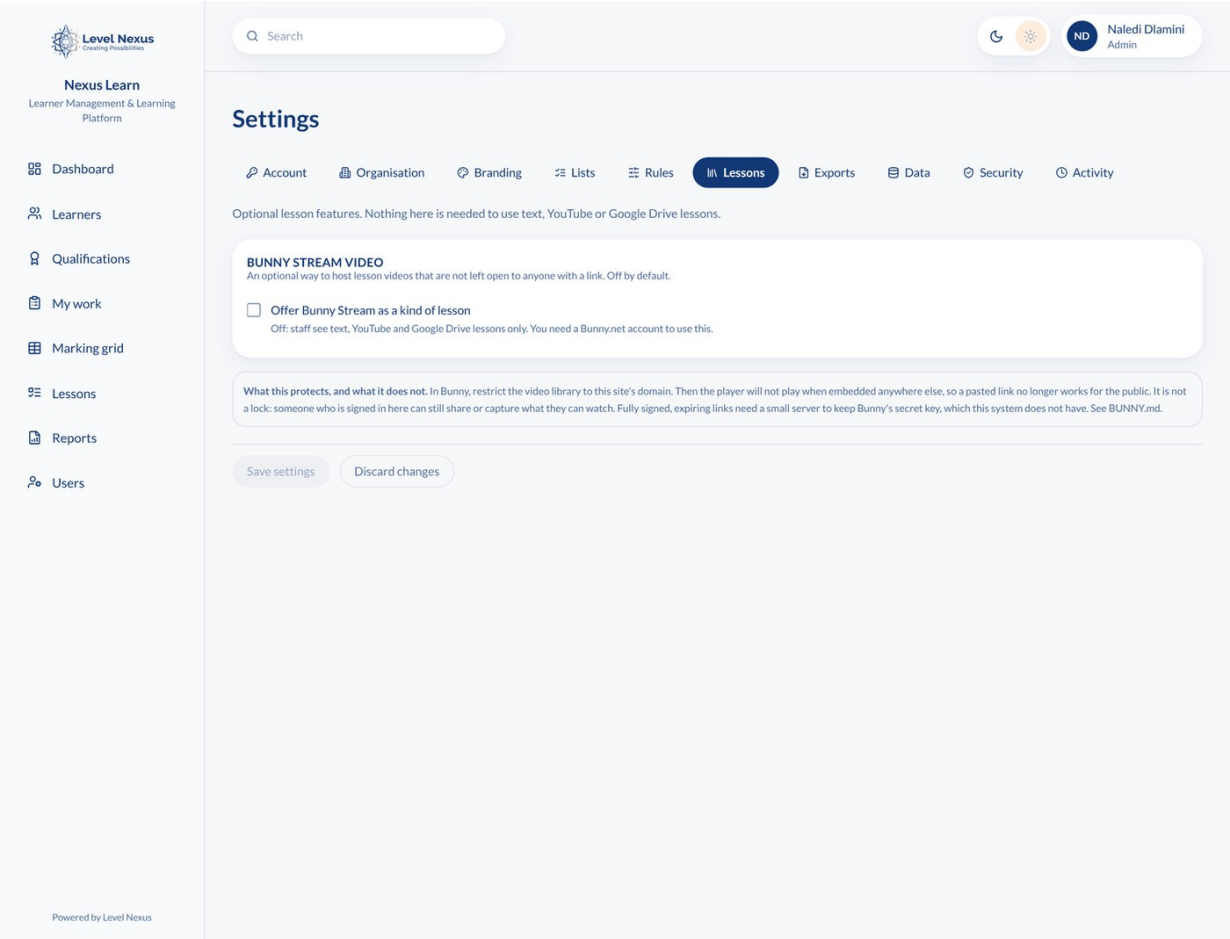

Settings, Rules tab

Changing a rule recalculates readiness everywhere on screen straight away. It does not alter any learner's saved records, so you can change it back.

Lessons

One toggle: **Offer Bunny Stream as a kind of lesson**. Turning it off only hides the option when adding a lesson; existing Bunny lessons keep playing. If you use Bunny, restrict your Bunny library to your site's domain. The steps are in BUNNY.md in the project files.

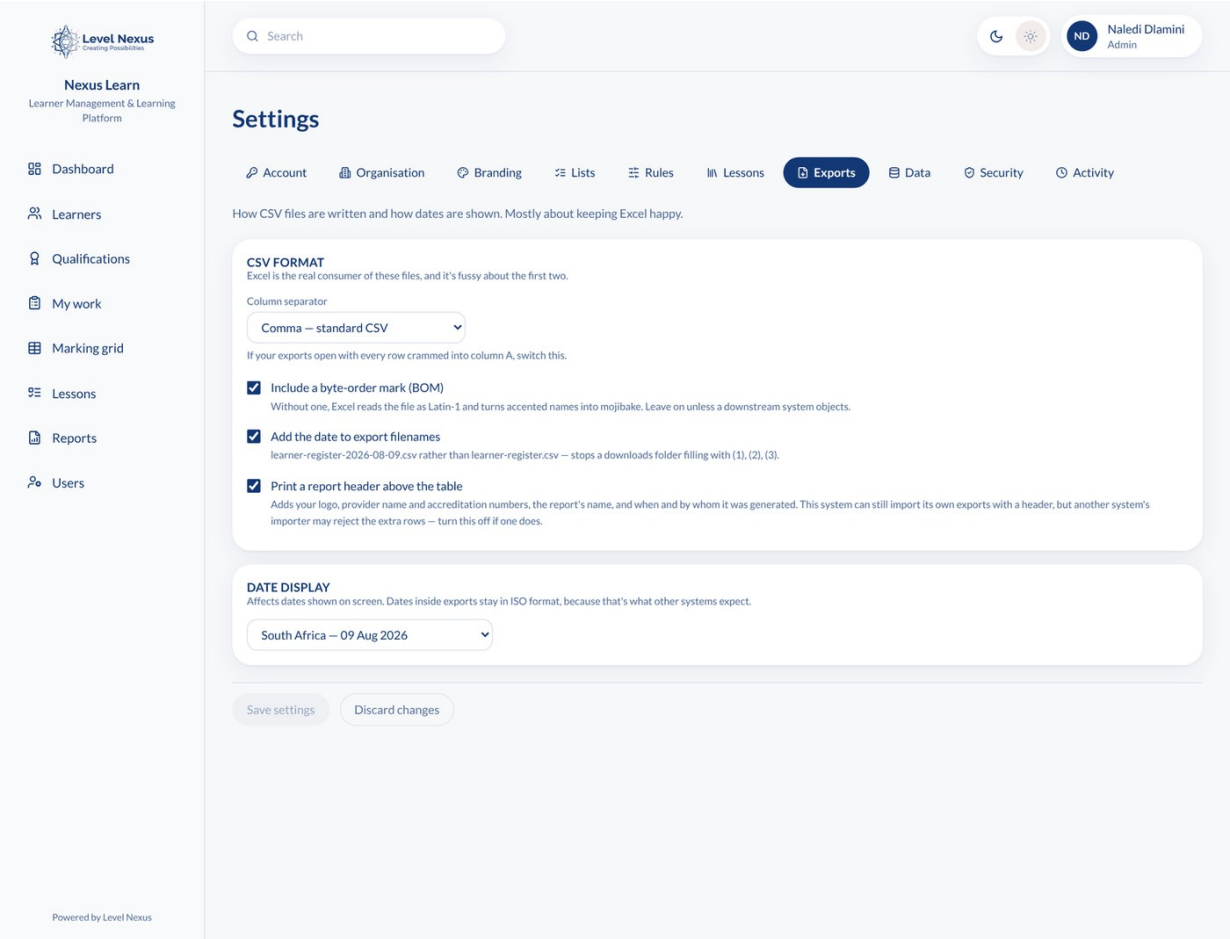

Settings, Lessons tab

Exports

How downloaded files and printed reports look.

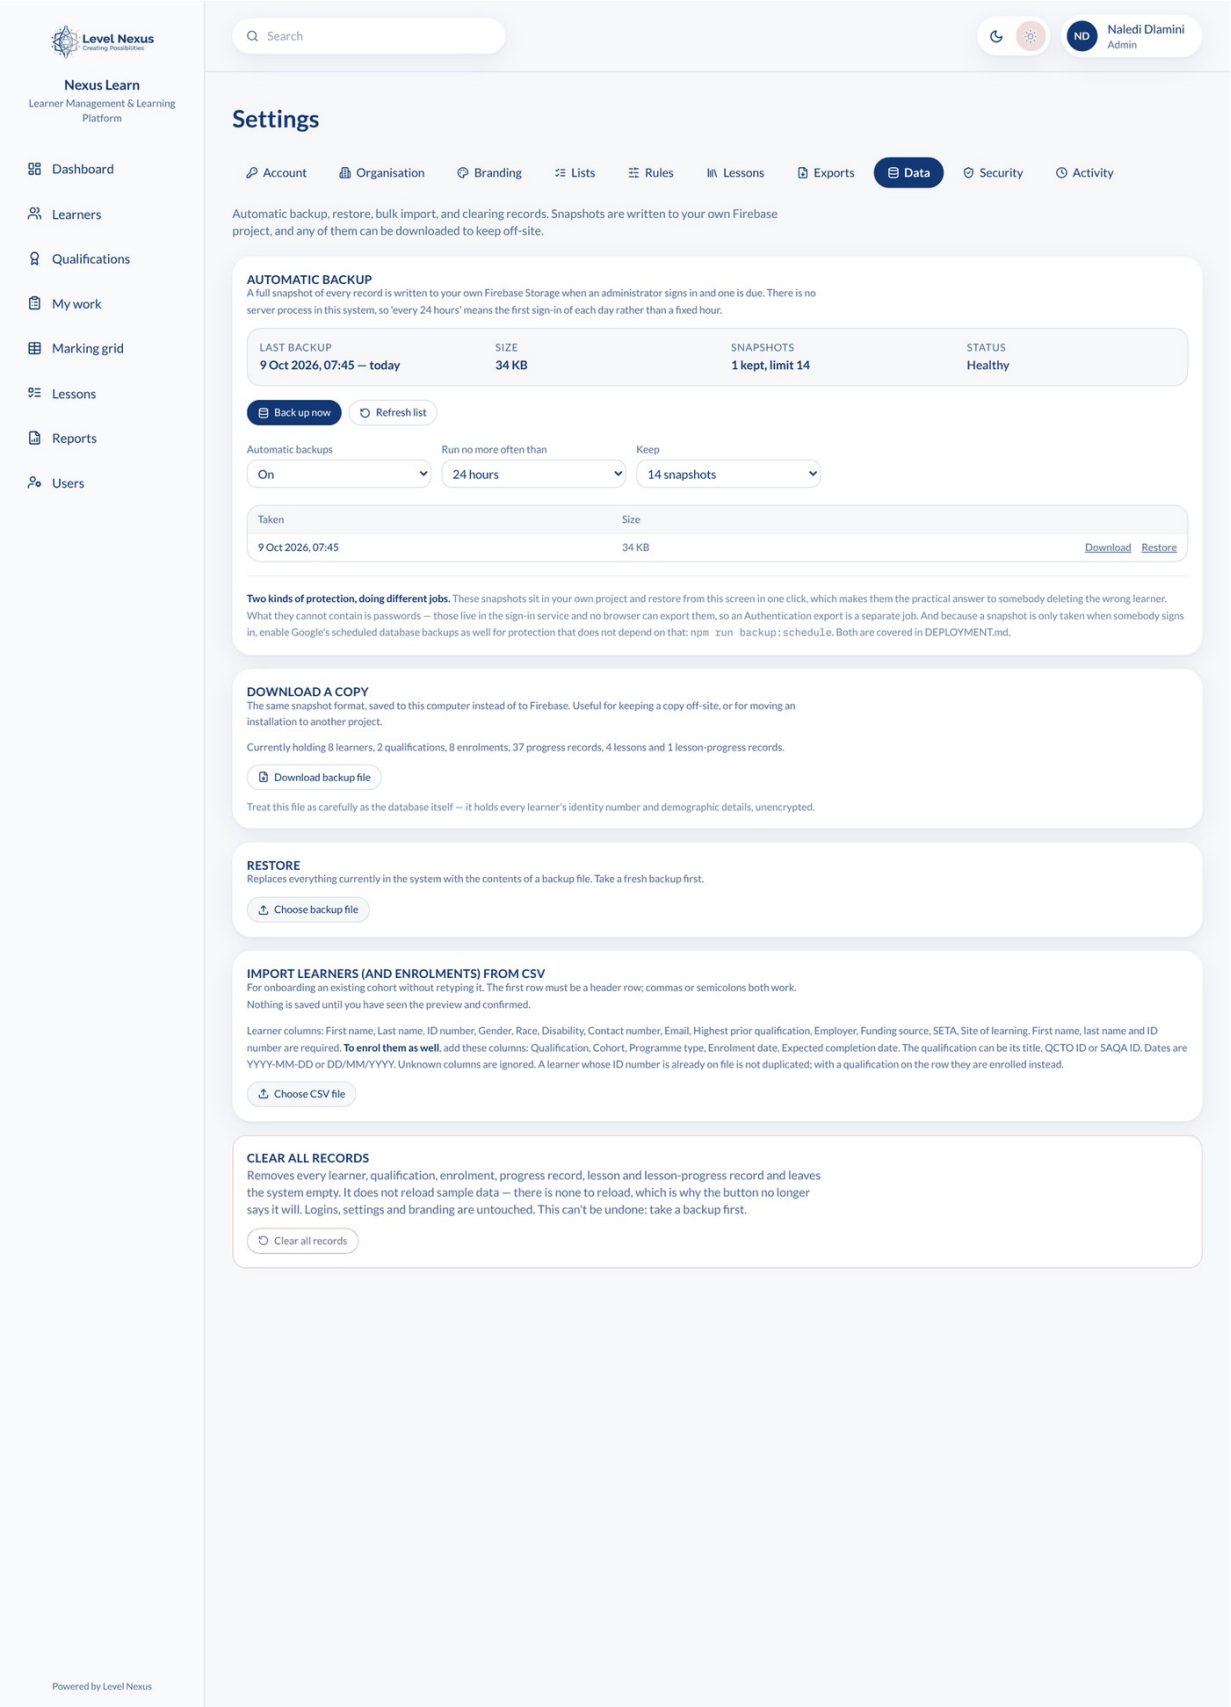

Setting	What it does
Column separator	Comma (standard CSV) or semicolon (for Excel on some regional settings). If your exports open with every row crammed into column A, switch it.
Include a byte-order mark (BOM)	On by default. Without it Excel turns accented names into garbled text. Leave it on unless a system receiving the file objects.
Add the date to export filenames	On by default. You get learner-register-2026-08-09.csv rather than learner-register.csv, which stops a downloads folder filling with (1), (2), (3).
Print a report header above the table	On by default. Adds your logo, provider name and accreditation numbers, the report's name, and when and by whom it was generated. Turn it off if another system's importer rejects the extra rows.
Date display	South Africa (default), United Kingdom, United States or ISO-style, each shown with an example date. It changes dates shown on screen only; dates inside exported files stay in ISO form (YYYY-MM-DD).

Settings, Exports tab

Data: backup, restore, import and clear

The Data tab protects and moves your records. It has five panels.

Settings, Data tab

Automatic backup. A full snapshot of every record is written to your own Firebase Storage when an Admin signs in and one is due. There is no background server in this system, so “every 24 hours” really means the first Admin sign-in of each day. The panel shows *Last backup*, *Size*, *Snapshots* (how many are kept, and the limit) and *Status* (Healthy, Failing or Off). Buttons: **Back up now** and **Refresh list**. Three controls:

Control	Choices
Automatic backups	On, or Off (snapshots only when you press the button)
Run no more often than	12 hours, 24 hours (default), 3 days, 7 days
Keep	7, 14 (default), 30 or 90 snapshots

Each snapshot in the list has **Download** and **Restore** links. If a run fails, the panel says why and a retry is made at the next Admin sign-in, no sooner than ten minutes later.

> **Two kinds of protection.** These snapshots live in your own project and restore in one click, which is the practical answer to somebody deleting the wrong learner. They cannot contain passwords (those live in the sign-in service). And because a snapshot is only taken when somebody signs in, also switch on Google's scheduled database backups. The project's DEPLOYMENT.md covers it. Both kinds of backup, and the uploaded logo, use Firebase services that need the paid Blaze plan, and their cost is in the Running Costs document.

Download a copy. Download backup file saves the same snapshot format to your computer, for keeping a copy off-site or moving an installation to another project. The panel lists how many learners, qualifications, enrolments, progress records, lessons and lesson-progress records it currently holds. Treat the file like the database itself: it holds every learner's ID number and demographic details, unencrypted.

Restore. Choose backup file replaces everything in the system with the contents of a backup. You must type RESTORE to confirm, and the window tells you how many learners, qualifications and enrolments the file holds and the date it was exported. Logins are not affected. Take a fresh backup first: your current records will be gone and this cannot be undone. Restoring from a snapshot in the list above works the same way.

Import learners (and enrolments) from CSV. For onboarding an existing cohort without retyping it. Nothing is saved until you have seen the preview and confirmed.

1. Prepare a CSV with a header row. Commas and semicolons both work. Required columns: **First name**, **Last name**, **ID number**. Optional learner columns: Gender, Race, Disability, Contact number, Email, Highest prior qualification, Employer, Funding source, SETA, Site of learning. To enrol the learners at the same time, add: **Qualification** (its title, QCTO ID or SAQA ID), Cohort, Programme type, Enrolment date and Expected completion date. Dates can be YYYY-MM-DD or DD/MM/YYYY. Unknown columns are ignored.
2. Press **Choose CSV file** and pick the file.
3. Read the **Preview**. Each row says *New learner*, *New learner + enrolment*, *Enrol existing learner* or *Skipped*, with notes beside it. A learner whose ID number is already on file is not duplicated; with a qualification on the row they are enrolled instead.
4. If the preview warns that enrolments fall outside your accredited scope or past a qualification's last date for new enrolments, they are left out unless you tick **Enrol them anyway**.
5. Press **Import N learners and M enrolments**, or **Cancel**.

The preview lists the first 300 rows; all rows are imported.

> **Excel and ID numbers.** If you build the CSV in Excel, format the ID number column as text before pasting. Excel turns a 13-digit number into scientific notation (such as 8.0E+12) and the import will reject or mis-read it.

Move assessor notes. Visible to Admins only, and only while some assessment records still hold their notes inside the record itself, which is the case on an installation that held data before notes became staff-only. It says how many records are affected. Press the button once: every evidence note, appeal note and attempt note moves to the staff-only store, nothing is lost, and the panel disappears when none are left. It is safe to run again. Do it straight after the new version goes live, because until then a learner can still read the old notes in their own record.

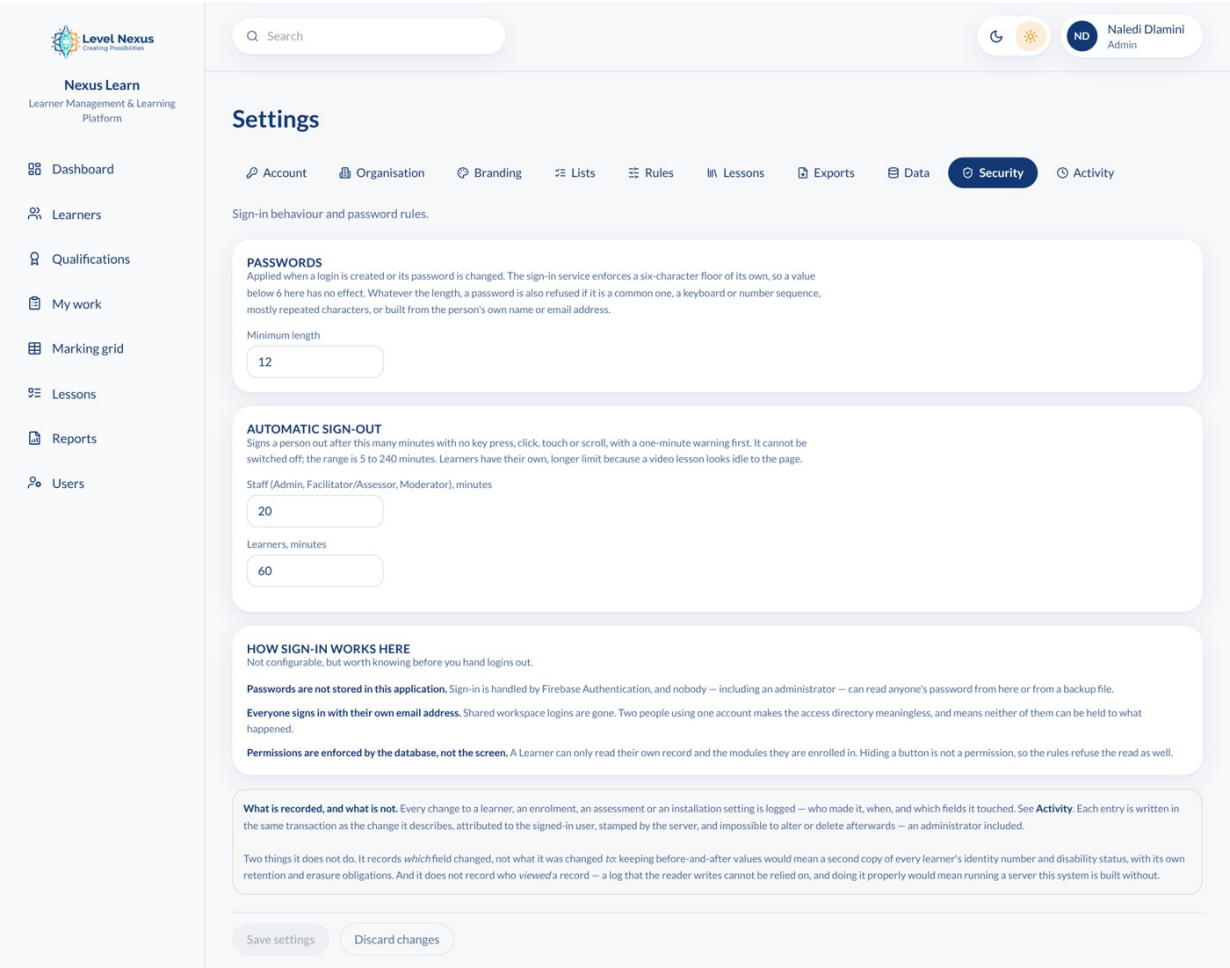

Clear all records. Visible to Admins only. Removes every learner, qualification, enrolment, progress record, lesson, lesson-progress record and certificate, and leaves the system empty. Logins, settings and branding are untouched. You must type DELETE to confirm, and it cannot be undone, so take a backup first.

Security

Passwords: the **Minimum length** for new passwords, 6 to 64 characters, default 12 (the sign-in service itself will not accept fewer than 6). Whatever the length, a password is also refused if it is a common one, a keyboard or number sequence, mostly repeated characters, or built from the person's name or email address.

Automatic sign-out: the minutes of inactivity after which staff are signed out (default 20) and, separately, learners (default 60, longer because a video lesson looks idle to the page). The range is 5 to 240 minutes and it cannot be switched off. A one-minute warning appears first.

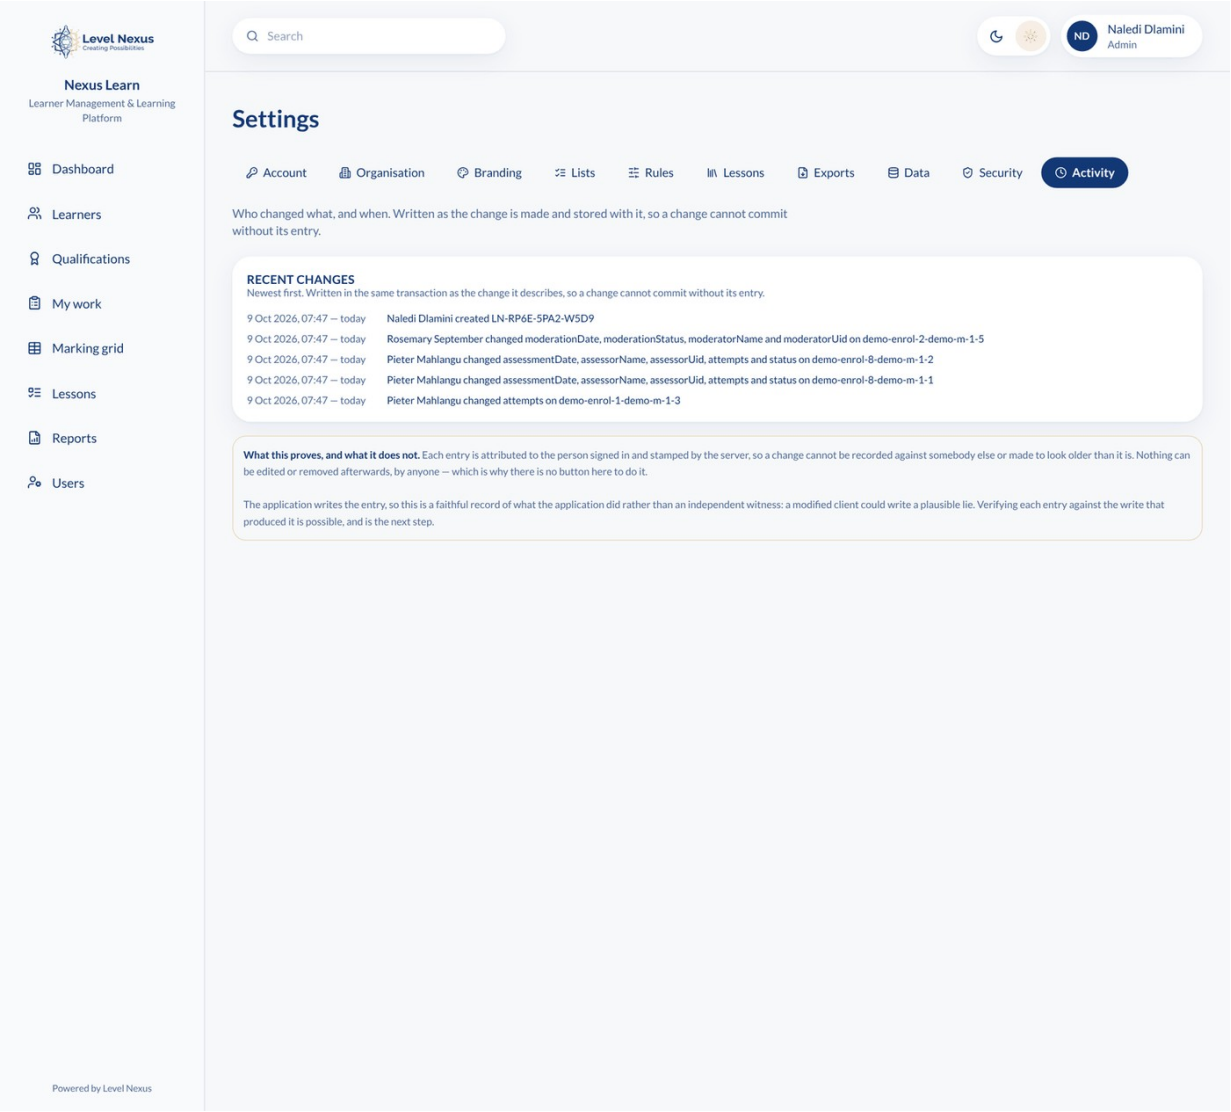

The tab also explains how sign-in works here, and what the change log does and does not record.

Settings, Security tab

Activity

A read-only list of **Recent changes**, newest first, up to the last 200. Each entry is written in the same step as the change it describes, so a change cannot be saved without leaving a trace.

Settings, Activity tab: recent changes

Know its limits before you rely on it in an audit. It records which fields changed, not their values; it does not record who merely *viewed* a record; and it is a faithful record of what the application did, not an independent witness. An Admin with direct access to the database console could change data without a trace here.

11. The learner's view

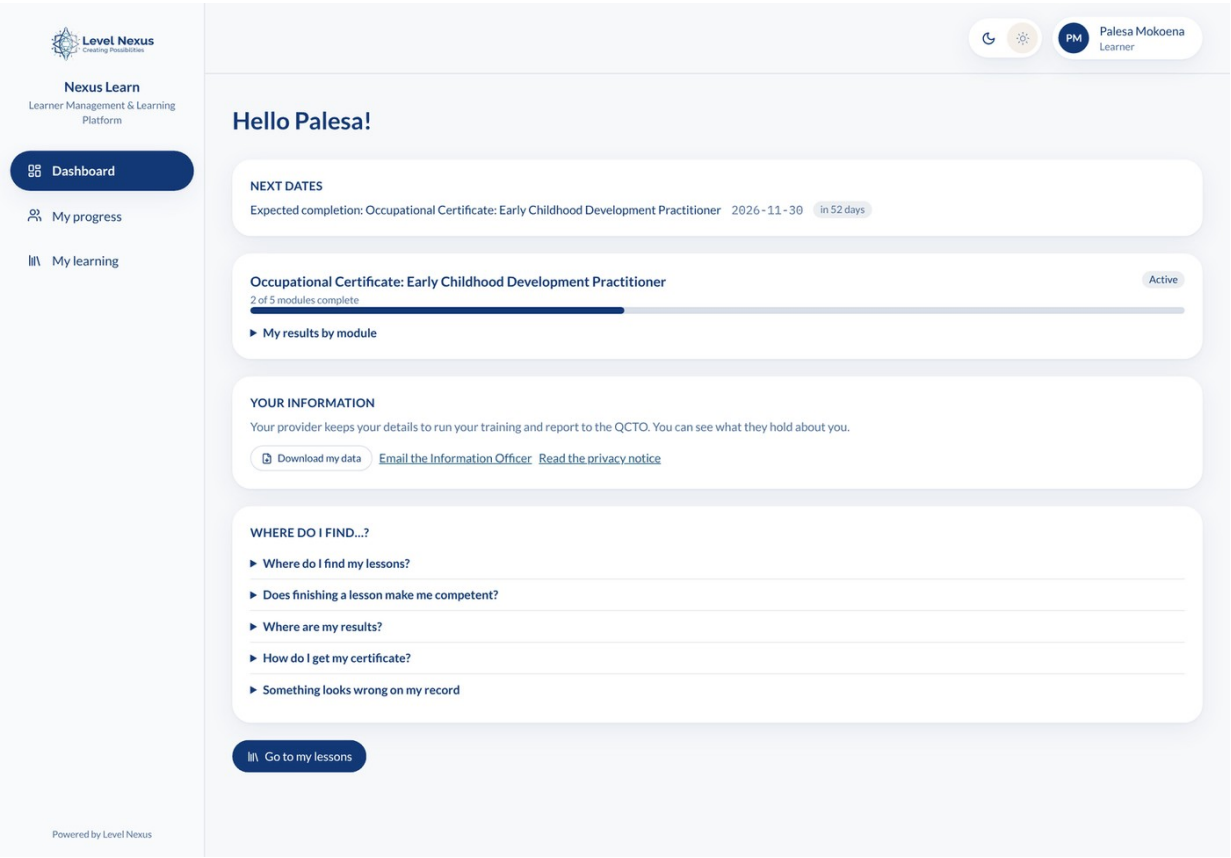

A learner signs in the same way as everyone else (section 1) and sees a much smaller system. Three items in the menu: **Dashboard**, **My progress** and **My learning**. There is no search box, and **Settings** in the profile menu opens only the Account tab, for changing their password. On a phone the three items sit in the bottom bar as Dashboard, Progress and Learn.

A learner sees only their own records. If you are training learners to use the system, this section is the one to hand them, or to walk through on a screen.

> **Before a learner can sign in** an Admin must create their login and link it to their learner record (section 9). A learner whose login is not linked sees *No learner record linked*, with the message *Your login isn't linked to a learner record yet. Ask your admin to link it under Users.* A learner with a record but no enrolment yet sees *You are not enrolled on a qualification yet*.

The Dashboard

The greeting, *Hello* and the learner's first name, is followed by these panels, top to bottom.

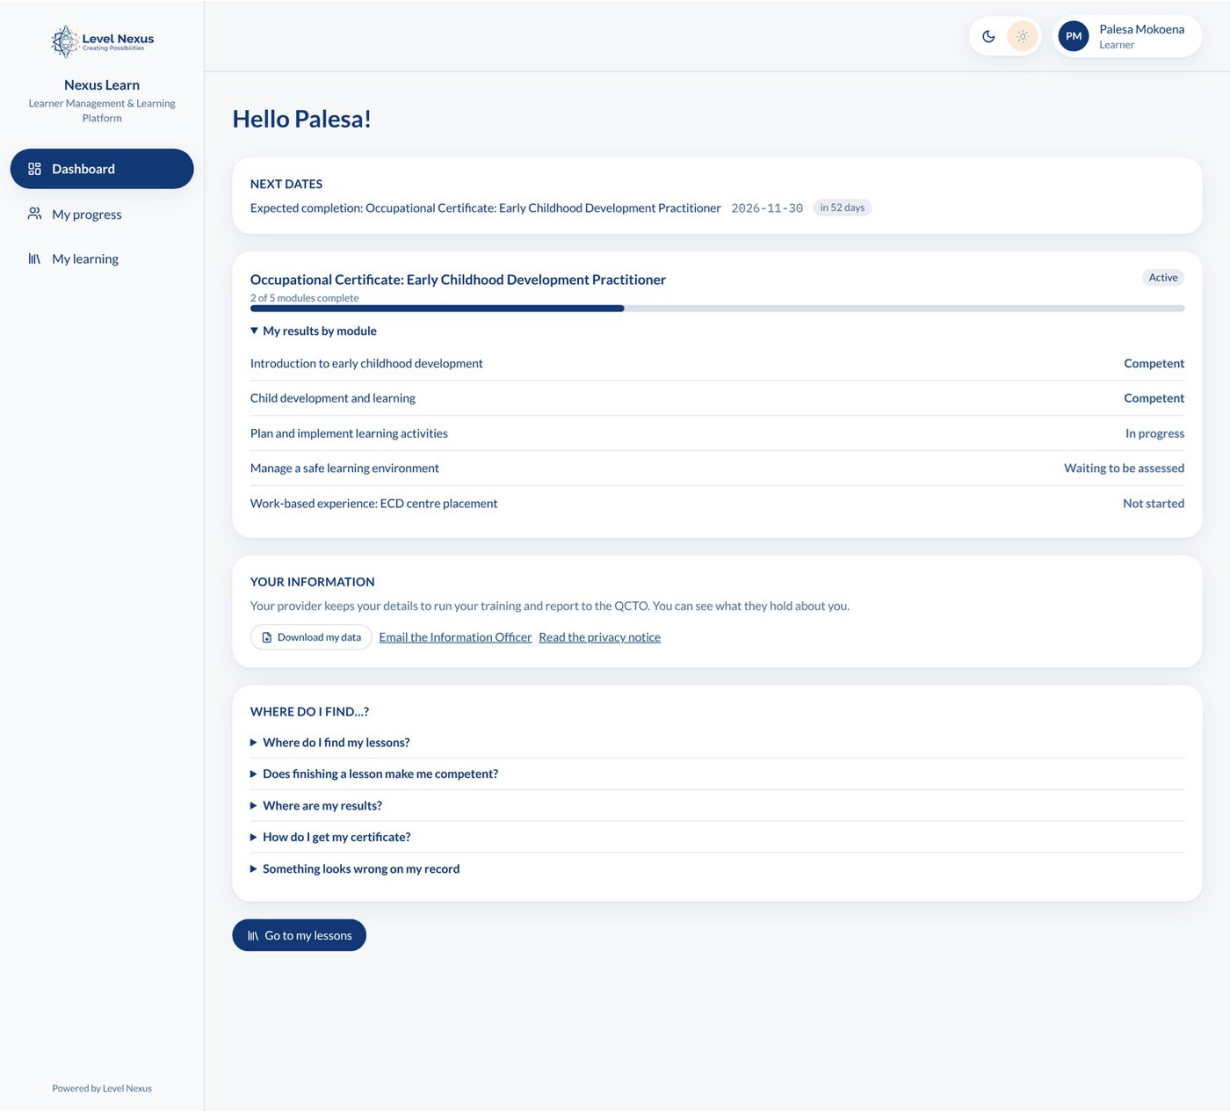

The learner Dashboard: next dates, one qualification with progress, Your information, and the Where do I find questions

Panel	What the learner sees
Next dates	Their expected completion date and, when one has been set and is still ahead, their external assessment (EISA) date, soonest first. Each has a badge such as *in 12 days*, *today* or *Overdue, 3 days ago*. Amber means within 30 days and red means overdue. With no dates set: *No dates have been set for you yet.*
One card per qualification	The qualification title, their enrolment status (for example Active), *N of M modules complete* and a progress bar. Withdrawn enrolments are not shown.

Panel	What the learner sees
My results by module	A collapsible list. Press it to open.
Your information	Data rights under POPIA (see below).
Where do I find…?	Five short questions and answers that open on a click.
Go to my lessons	A button that opens My learning.

My results by module

Each module shows one plain-language result: **Competent**, **Not yet competent**, **Waiting to be assessed**, **In progress** or **Not started**. Under it, every assessment attempt is listed, for example *Attempt 1: Not Yet Competent (2026-03-25)*, so the learner can see their full history. If an appeal has been recorded the line reads *Appeal lodged*, *waiting for a decision*, *Appeal upheld* or *Appeal dismissed*, with the date it was lodged.

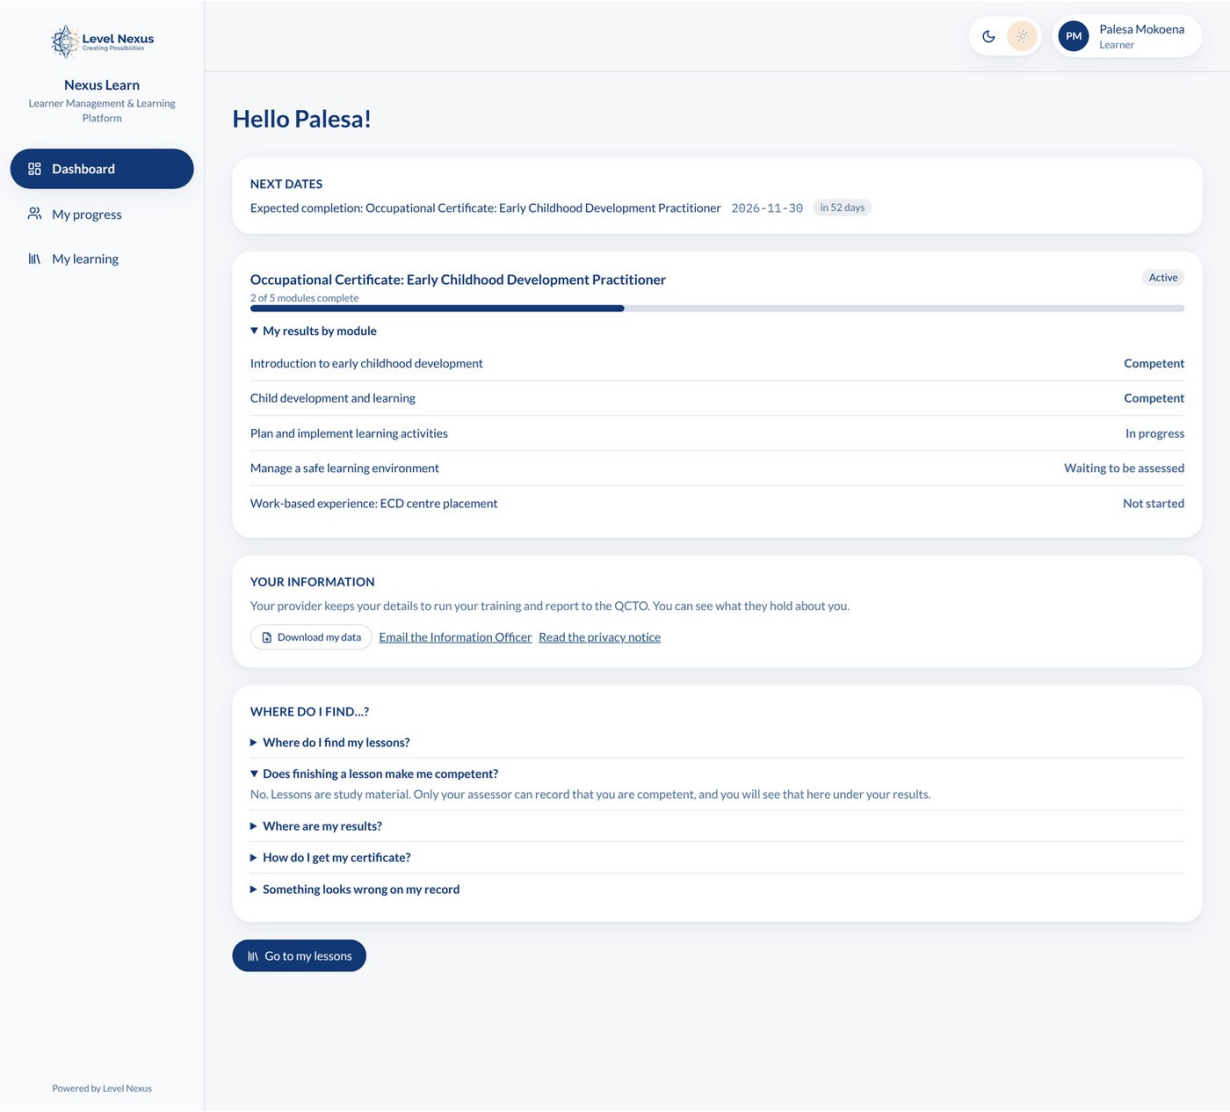

My results by module opened, showing the outcome and attempts for each module

> **Why “Competent” and “modules complete” can disagree.** A module reads *Competent* as soon as the assessor records it. It only counts towards *N of M modules complete* once internal moderation has confirmed it, if your Rules setting requires that (section 10). A learner who asks why a Competent module is not counted yet is usually waiting for the moderator. The Dashboard does not show moderation details at all.

Your information (POPIA)

- **Download my data** saves a file called my-data followed by today's date (a .json file, which opens in any text editor). It holds everything the system stores about them: personal details, enrolments, assessment records, lesson progress and certificates.
- **Email the Information Officer** opens a ready-written request in the learner's own email app. It appears only when an Information Officer email is set in Settings → Organisation.
- **Read the privacy notice** opens your notice in a new tab. It appears only when a privacy notice address starting with https:// is set.
- If neither of the last two is set, the panel says *To ask about your information, speak to your facilitator*.

Where do I find…?

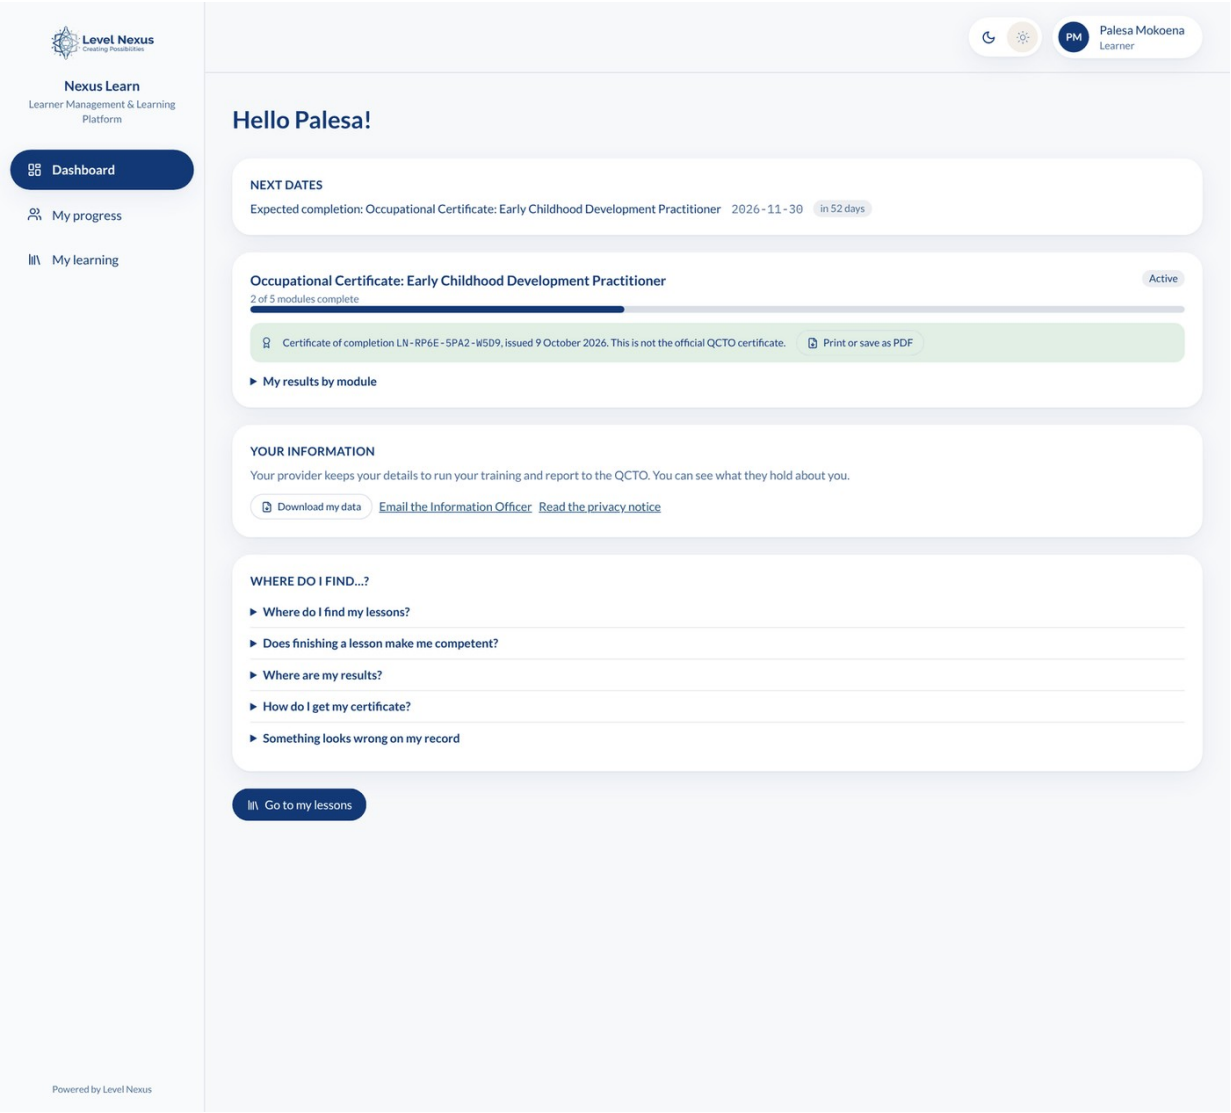

An open question in the Where do I find section

The five questions are: *Where do I find my lessons?*, *Does finishing a lesson make me competent?* (no: only an assessor records competence), *Where are my results?*, *How do I get my certificate?* and *Something looks wrong on my record*. The last one tells the learner to speak to their facilitator or assessor and that they may appeal a result.

A certificate of completion

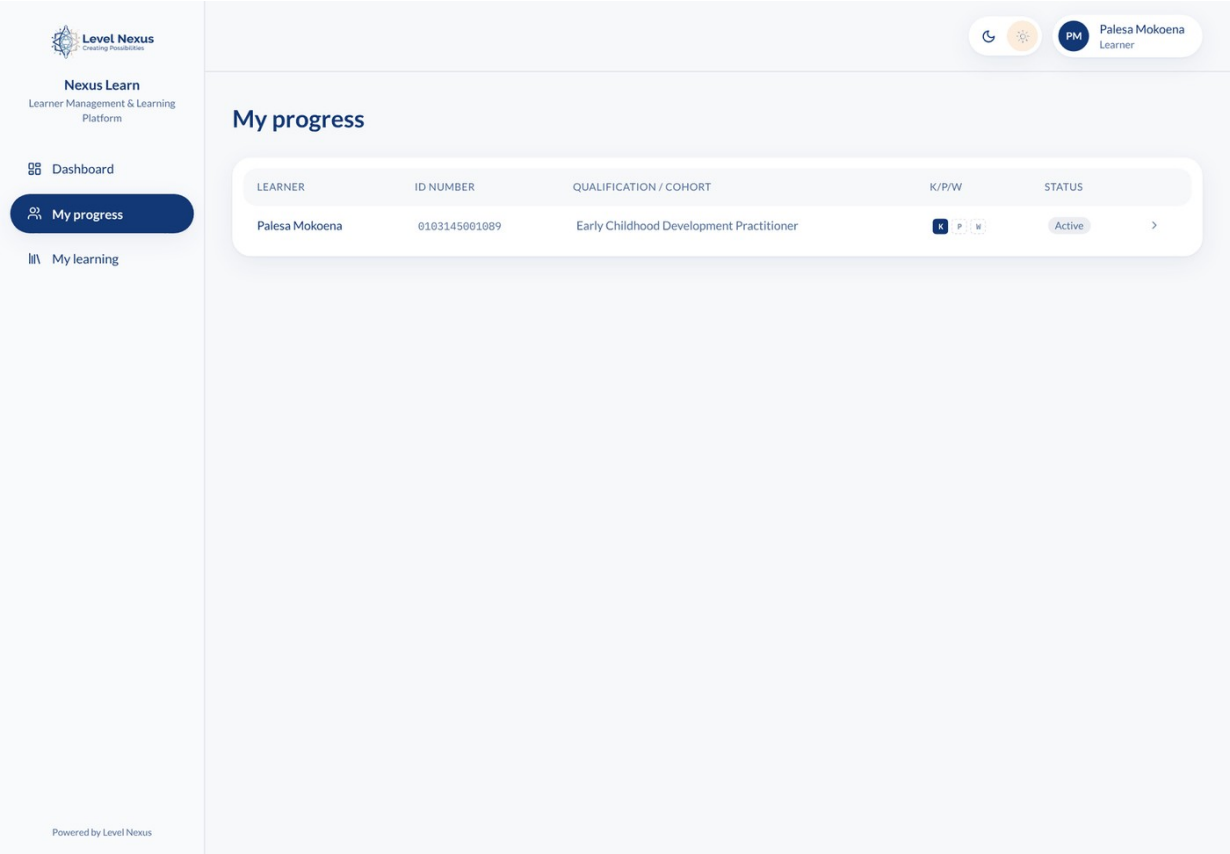

Once staff have issued a certificate of completion (section 7), it appears on the qualification card with its code, the date it was issued, and the reminder *This is not the official QCTO certificate.* **Print or save as PDF** opens the printable page.

The Dashboard with a certificate of completion on the qualification card

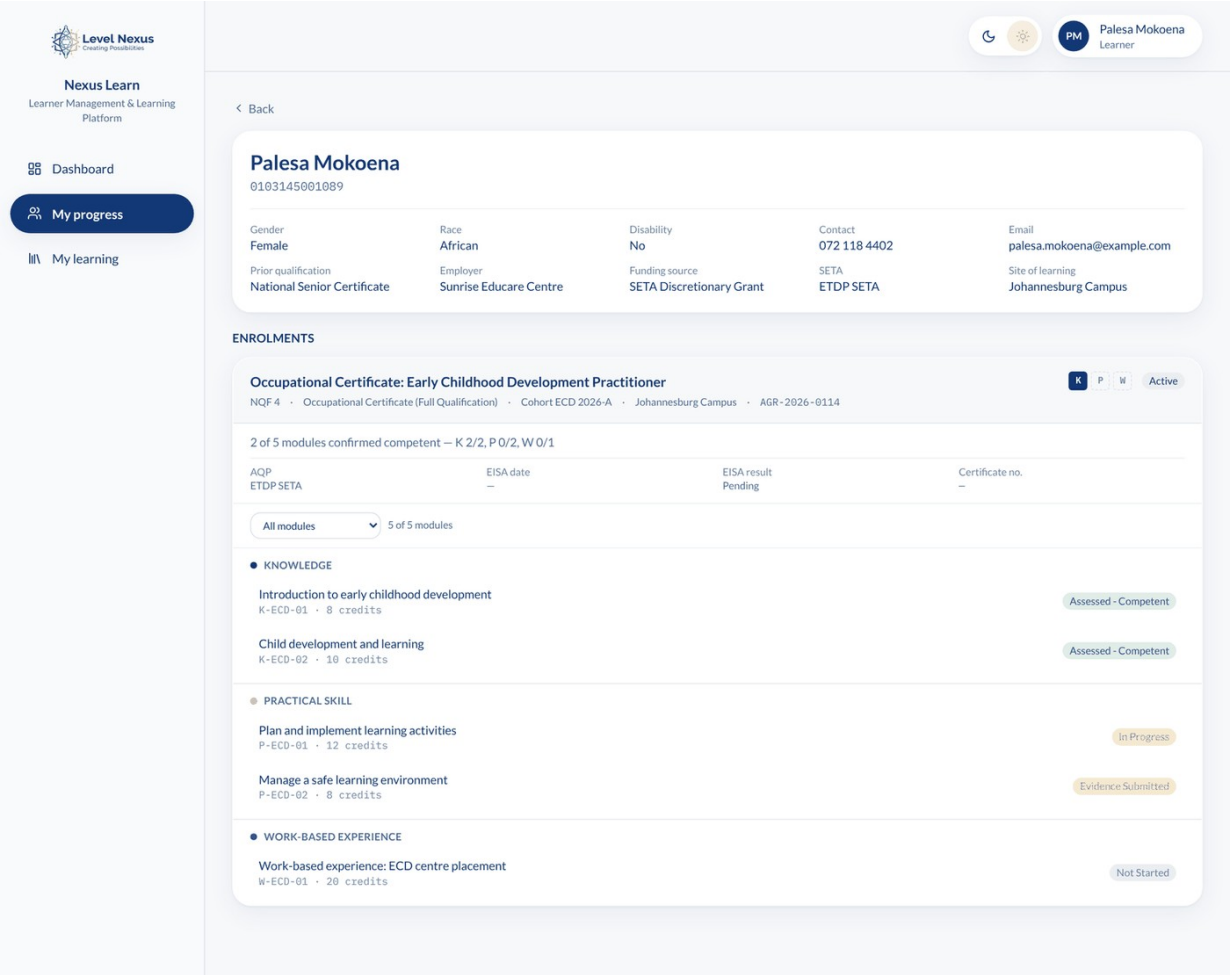

My progress

This is the Learners screen reduced to one row: the learner's own. It shows their name, ID number, qualification and cohort, the K, P and W chips, and status.

My progress: the learner's own single row

Click the row to open the learner's own profile. It is the same screen staff use (section 4), without the staff controls: their personal details, each enrolment, and every module with its result. The back link reads *Back* here (staff see *Back to learners*) and returns to My progress.

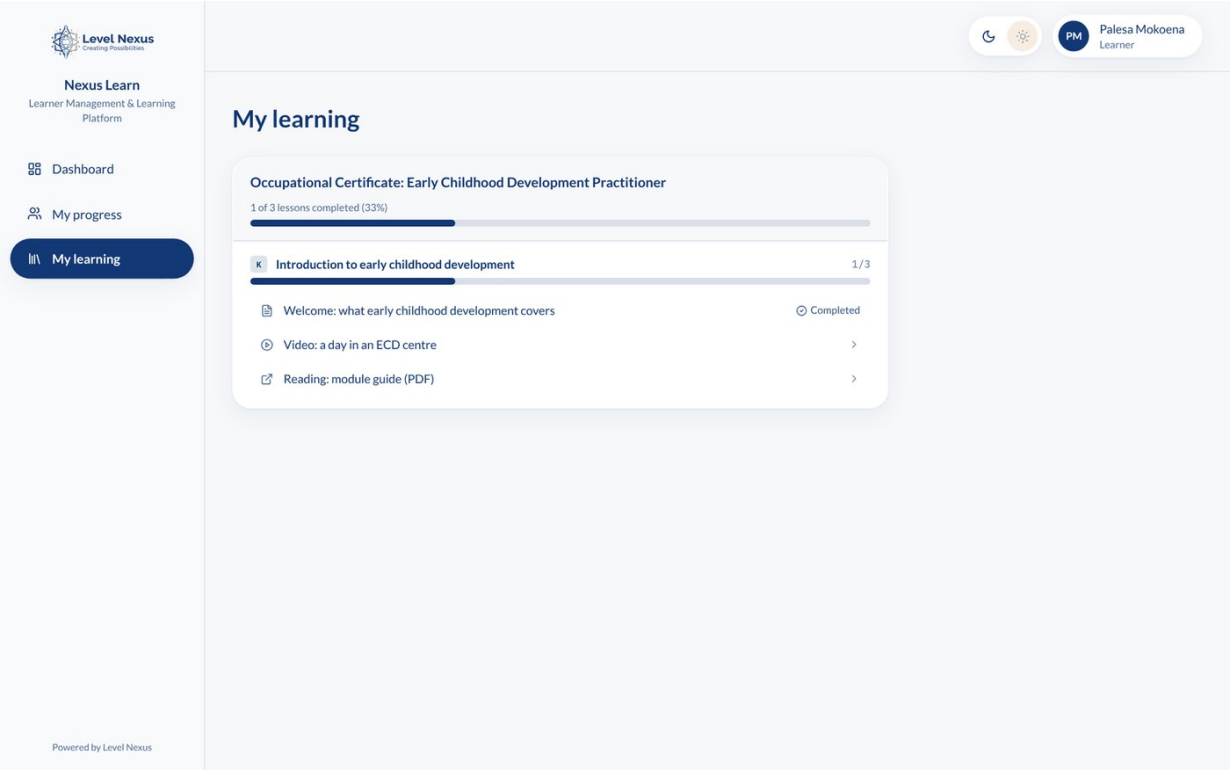

A learner's own profile: no Edit button, and each module shows its result only

Module rows show the title, code, credits and the result (for example *Assessed - Competent* or *Evidence Submitted*). They are plain text for a learner: nothing opens when one is clicked, and the enrolment card has no **Edit** button.

> **What learners are not shown, and what they cannot read.** The learner screens leave out moderation details: the profile shows each module's result and nothing else, and the module form is not offered. Assessor notes go further. The evidence notes, the appeal notes and the note on each assessment attempt are kept in a separate staff-only record that the database refuses to show to a learner, so they cannot be reached from the screens, from the database or from *Download my data*. A learner can still read the rest of their own progress record: results, dates, hours, how many attempts and with what outcome, and the moderation status. If a learner asks for their notes under POPIA, that is an access request for the Information Officer to decide; the staff-side **Download their data** button on the learner's profile includes the notes. Notes written before this version stay readable by their learner until an Administrator opens **Settings → Data** and presses **Move assessor notes**; that panel only appears while there are notes still to move.

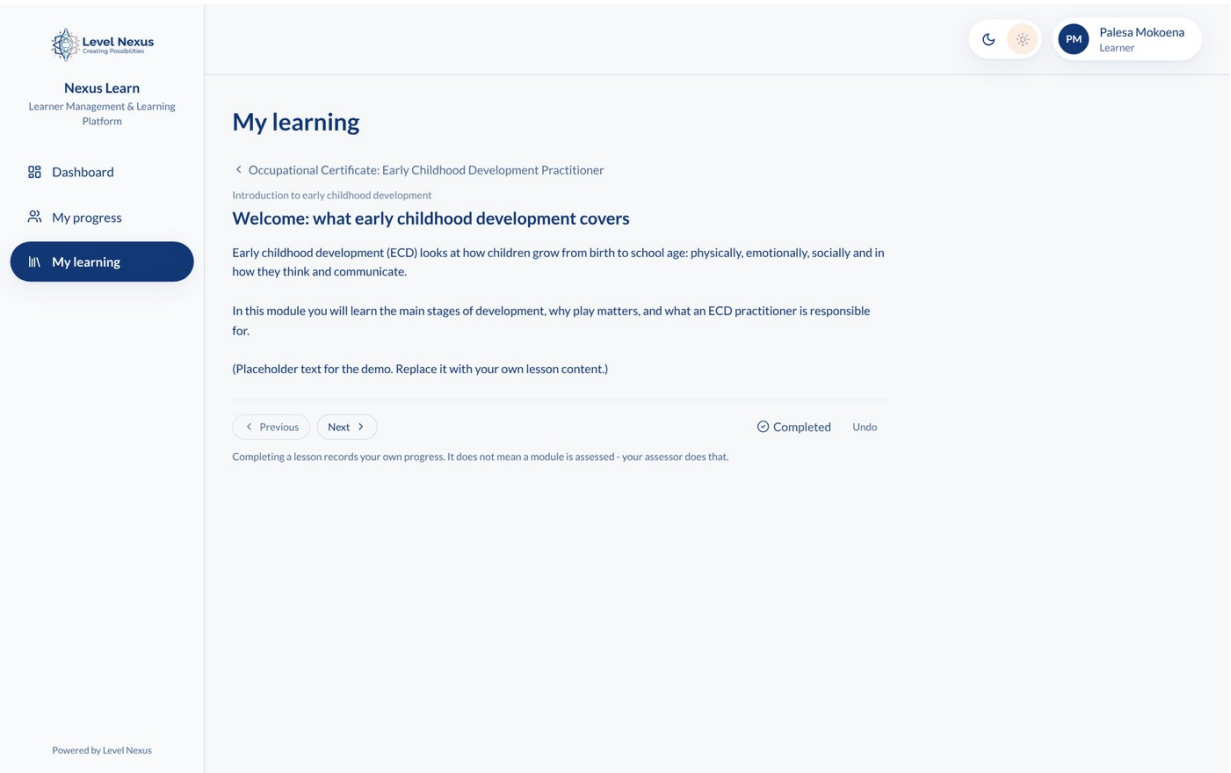

My learning

Where a learner studies. Each enrolment is a card with the qualification title, *N of M lessons completed (P%)* and a progress bar. Below it, each module is listed with its K, P or W badge, a count such as *2/3* and its own bar, then its lessons. Only **published** lessons appear, and a module with none is left out. Where nothing is published the card says *No lessons have been published for this qualification yet*.

My learning: a qualification with modules and lessons

Press a lesson to open it. The module name and lesson title are at the top, and a back link, which carries the qualification's title, returns to the list.

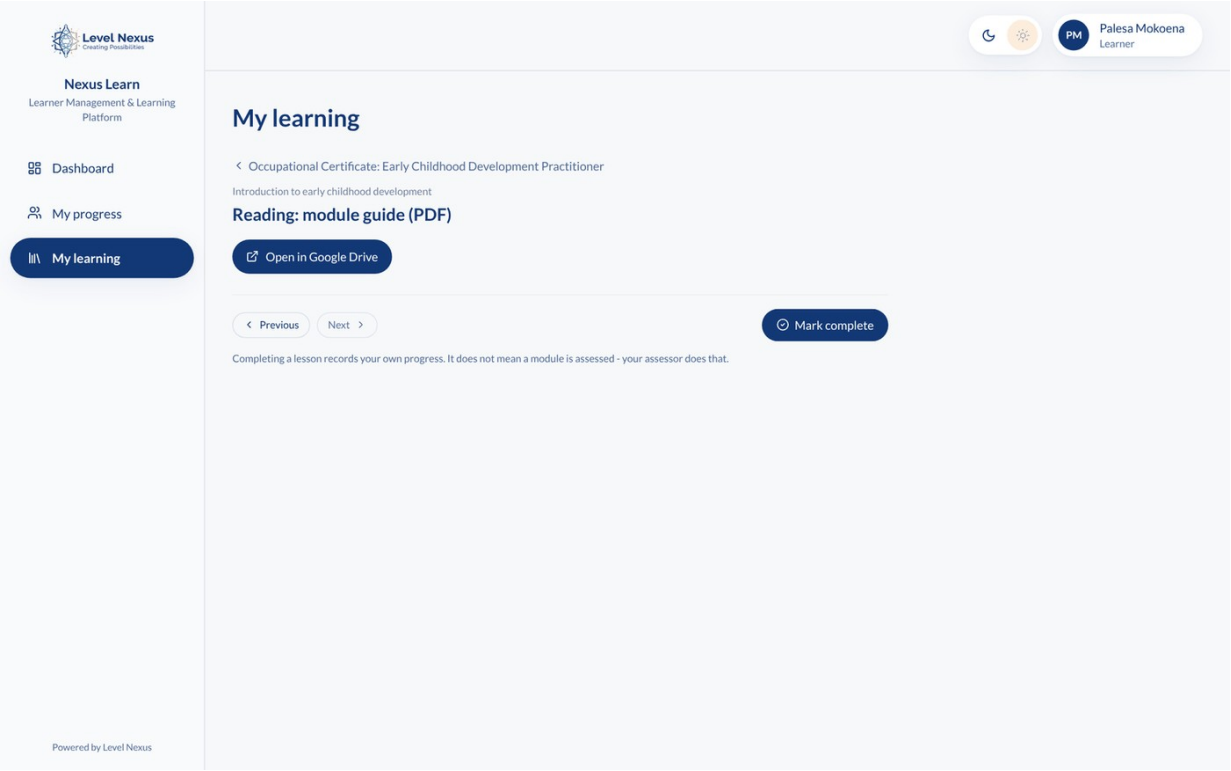

A text lesson open, with Previous, Next and Mark complete

How a lesson shows depends on its type (section 7):

Lesson type	What the learner sees
Text	The text, shown plainly.

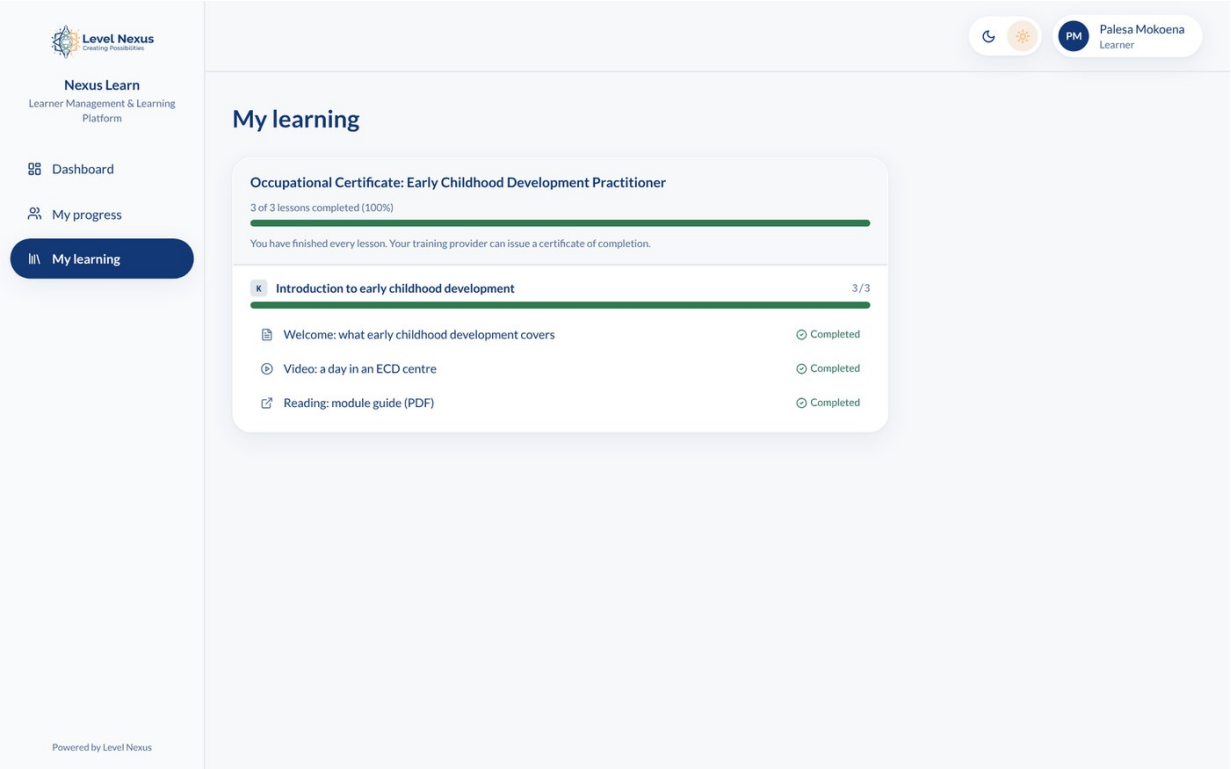

Lesson type	What the learner sees
YouTube or Bunny video	The video player in the page. A YouTube lesson also has *Video not playing? Watch it on YouTube*.
Google Drive file	An **Open in Google Drive** button, which opens the file in a new tab.
A link that is no longer valid	*This lesson's link isn't working. Please tell your facilitator*.

A Google Drive lesson with its Open in Google Drive button

At the foot of a lesson, **Previous** and **Next** move between the lessons in the same module. **Mark complete** records that the learner has worked through the lesson; the button then becomes *Completed* with an **Undo** link. A line under it reminds them that completing a lesson records their own progress and does not mean a module is assessed. Only an assessor can record competence.

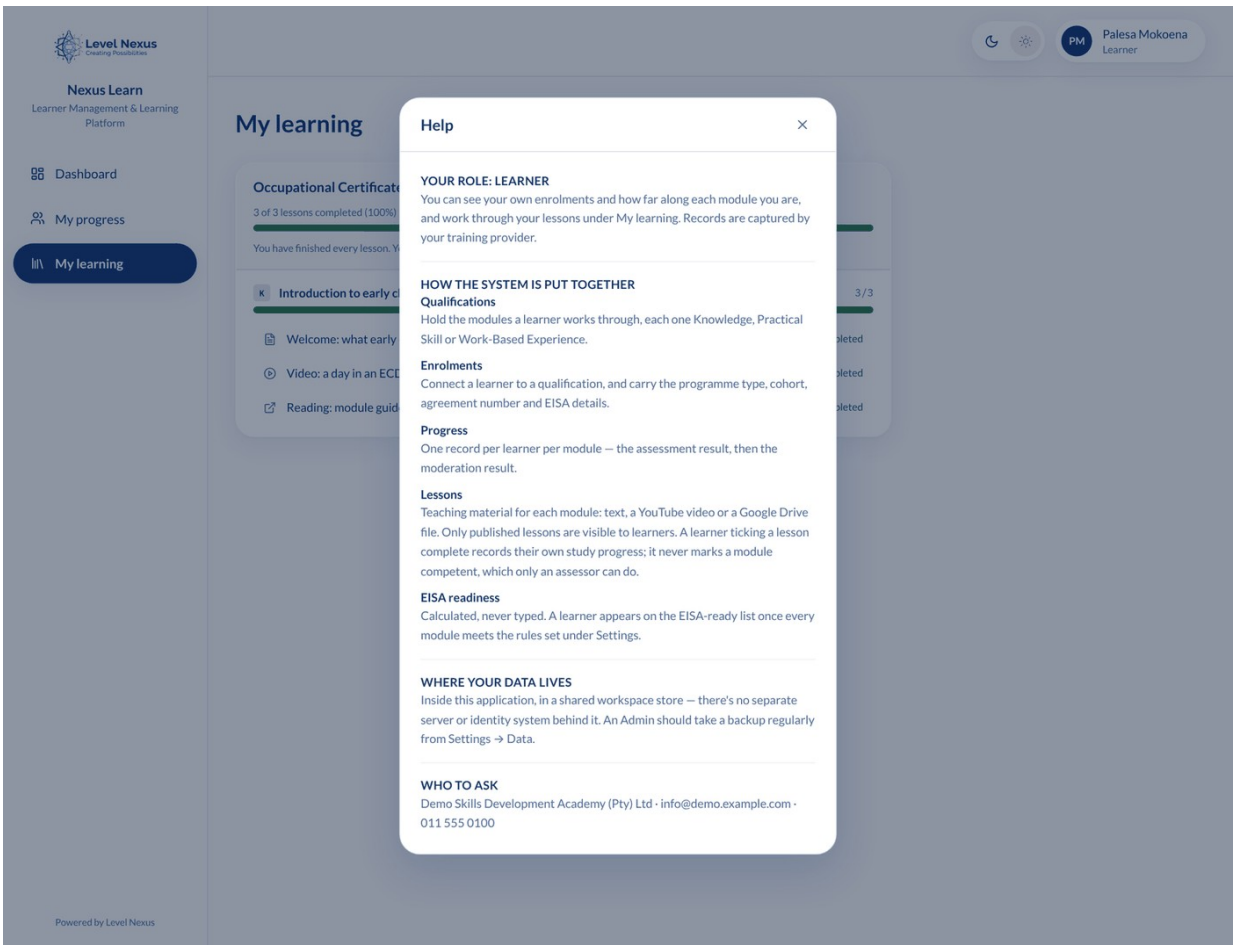

When every published lesson is complete, the card says *You have finished every lesson. Your training provider can issue a certificate of completion.* After staff issue it, a **Certificate of completion** button takes its place, with the date it was issued.

A qualification with every lesson completed

Help for learners

Help in the profile menu opens the same window as for staff, with the learner's role explained at the top: *You can see your own enrolments and how far along each module you are, and work through your lessons under My learning. Records are captured by your training provider.* Below it are the system overview and **Who to ask**, which shows your provider's contact details from Settings → Organisation.

The Help window as a learner sees it

12. Troubleshooting

The messages below are the ones the application actually shows, so you can search this page for the words on your screen. Most problems come down to a role, a missing setting or a connection.

Signing in

What you see	What it means	What to do
That email address and password don't match a login on file.	One of the two is wrong. The message is the same whether the email exists or not, on purpose.	Check caps lock and spelling, or use **Forgot password?** (section 1).
Too many failed attempts. Wait a few minutes before trying again.	The sign-in service has paused the account after repeated failures.	Wait, then try once, carefully.
Couldn't reach the sign-in service. Check your internet connection.	A network problem on your side.	Check the connection and reload the page.
That login has been disabled. or *This login has been switched off*	The login is marked inactive.	An Admin turns it back on under **Users** (section 9).
This sign-in has no access record	The password works, but no profile (role) is attached to the login, so it can read nothing.	An Admin adds it under **Users**. The on-screen message says the same.
No learner record linked	A learner login that is not linked to a learner record.	An Admin links it under **Users** (sections 9 and 11).
For security, sign out and sign back in before changing this.	The sign-in service wants a fresh sign-in before a sensitive change, such as a password.	Sign out, sign in again, then repeat the change.

Seeing and saving

What you see	What it means	What to do
A menu item is missing	Menus follow the role (see *Who can do what* at the start). Learners see three items; Moderators do not see Marking grid.	Ask an Admin if your role should be different.
Your login doesn't have permission to do that.	The role cannot make that change, and the database refused it. Nothing was saved.	Check the role table. If the role should allow it, ask an Admin.
The database isn't set up for that yet. An administrator may still need to deploy the indexes.	A deployment step was skipped when the system was installed.	Pass this message to whoever maintains the installation (DEPLOYMENT.md).
Couldn't reach the database. or *The system is busy right now.*	A connection or load problem.	Wait a moment and try again. Nothing is lost if you have not seen a confirmation.
That record no longer exists.	Somebody removed it while you were looking at it.	Go back to the list and refresh.
Save is greyed out on a moderation form	You assessed this module yourself, and a moderator may not confirm their own assessment (section 6).	Ask a different moderator.
This qualification is marked as outside your accredited scope. or *The last date for new enrolments on this qualification was …*	The qualification blocks new enrolments (section 5).	If the setting is wrong, an Admin corrects it under **Qualifications**. If it is right, do not enrol.

What you see	What it means	What to do
A learner is “Not yet ready” although every module is assessed	Moderation has not confirmed every module, and your Rules setting requires it (sections 6 and 10).	Check **Awaiting moderation** in My work.
An attempt cannot be added	The limit is 10 attempts per module, and each attempt needs a date and an outcome (section 6).	Check the date and outcome.
A cell is skipped in the Marking grid	The result says why: *Already recorded*, *An appeal is open*, or the attempt limit (section 6).	Decide the appeal first, or mark the module from the learner’s profile.
A learner says they cannot see a lesson	Only **published** lessons show, and only for qualifications the learner is enrolled on (sections 7 and 11).	Check the lesson is published and the enrolment is not withdrawn.

Exports and imports

What you see	What to do
Every row crammed into column A	Settings → Exports → **Column separator**: switch between comma and semicolon (section 10).
Accented names look garbled	Settings → Exports: turn **Include a byte-order mark (BOM)** on.
ID numbers show as 1.03E+11 and the leading zero is gone	Excel has guessed a number. Use the Excel (.xlsx) export, or import the CSV through **Data → From Text/CSV** with the ID column set to Text (section 8).
Another system rejects an export	Settings → Exports: turn **Print a report header above the table** off.
No logo is set, so the header shows the provider name only.	Upload a logo under Settings → Branding. The Level Nexus mark is never used on reports.
Import rows are marked *Skipped*	Read the notes beside the row in the preview: a missing First name, Last name or ID number, or an unreadable date. Fix the file and choose it again. Nothing is saved until you press Import.
That file isn’t readable JSON. when restoring	The file is not a backup downloaded from this system. Choose a file made by **Download backup file** or by a snapshot’s **Download** link.
The date entry box shows month before day, or the reverse	The date box is the browser’s own and follows your computer’s or phone’s language settings. Settings → Exports → **Date display** changes how dates are shown, not how the box is typed into.

Email

Notify learners and **Email details** place a message in a queue; they do not send it. Nothing is delivered until the Trigger Email extension and a mail provider are set up for the installation, which is covered with its costs in the Running Costs document. Until then, nobody receives these messages. The confirmation window warns you of this, but Notify learners still marks the lessons as announced afterwards, so they will not be offered for announcement a second time. Tell learners some other way, and set up the sender before you rely on Notify learners.

Lessons

What you see	What to do
A **Link needs fixing** badge on a lesson (staff) or *This lesson’s link isn’t working. Please tell your facilitator.* (learner)	Open the lesson, paste a valid link, and save (section 7).

What you see	What to do
A YouTube video will not play inside the page	Some owners block embedding. The learner can use **Video not playing? Watch it on YouTube**.
A Bunny video will not play	Check the library's allowed domain matches your site's address (BUNNY.md).
A learner is asked to request access to a Google Drive file	Open the file in Drive and change its sharing so the people who need it can open it, or give them the access they need.

Backups

What you see	What to do
Status **Failing** under Settings → Data	Read the message in the panel. On the free Spark plan Failing is expected, because file storage needs the paid Blaze plan (see the Running Costs document). A retry happens at the next Admin sign-in, at least ten minutes later; you can press **Back up now** to try straight away.
No snapshots yet.	One is taken the next time an Admin signs in, or press **Back up now**.

Asking for help

When you report a problem, include the exact words of the message, what you were doing, your role, the time, and a screenshot with any learner's ID number covered. A learner's ID number is personal information and does not belong in a chat or an email.

What comes next

Standard operating procedures (SOPs) are in their own document, the SOP Pack: seven step-by-step procedures, with owners and checks, for the routines a provider repeats: onboarding learners, assessing, moderating and EISA, the quarter-end submission, logins, backups and restores, and a learner's request for their data. The running costs in rand are in their own document, Running Costs.
